Maybe that CB craze in 1975 got a number of people interested in talking on the radio, and decided to get the "real thing", the ham license. That's how I got into ham radio, via the CB path. Got a tech in 1976, had to go to the NYC field office (which is now condos) to take my tests. Got my "extra lite" nearly 2 years ago.

So maybe IL had no real effect, or the CB thing compensated for it.

Maybe. But in the '70s, the difference between getting on the air with cb and
getting a ham license was much greater than today.

>That's how I got into ham radio, via the CB path. Got

Many hams did the same thing. Many others simply went straight into ham radio.
Today, though, there is no reason for people not to go straight to ham radio
"right out of the box".

Vipul, where do you come up with this?

I recently proctored a VE session where six folks tested for Morse Code,
five of whom passed. None was under 21 years of age.

Also, it is considered proper "netiquette" to cite the author of posts
that you are quoting and subsequently "responding" to. I know that this has
been addressed to you before. Is there a reason you choose to show disrespect
to those whom you quote?

I didn't spend my golden years touting the virtues of CW (and putting
down anyone who didn't have my vision), then ignore an invitation to
operate my favorite mode for some ineffectual excuse on why I can't
operate radio away from my home QTH.

you deserve some kind of an award for that.

> features at competitive prices.

OK, I guess they were the foot-in-the-door JA rigs but they didn't
bump Collins & Drake very hard so I didn't pay much attention to 'em.
On a dollar vs. performance basis Drake was the king of the hill until
the JAs started producing their heavy-duty competition grade xcvrs.
Took awhile for a lotta hams to get comfortable with xcvrs vs. the
separates they were used to.

K7JEB wrote:

> >Not being a serious DXer or contester or field-day op,
> >I'm more than happy to take your word on this, Brian.

The performance-eating cost-is-no-object types like the serious dxers
& contesters drive the competetion between the big names in the ham
radio building business at the high end which is where their big
profits and reputations come from. Collins played that game extremely
well in the post WW2 tubes era. Which is good because the technologies
& tricks the JAs implement in their $4,000 treasures eventually filter
down to their lower cost offerings.

Kenwood finally trumped Collins at the high end with their pricey
930/940 series in the 1978-1982 timeframe.

> >As owner of a couple of Kenwoodys myself (850's), I

Cheaper to implement than pots & rotary switches. Like chipsets are a
helluva lot cheaper to produce than are Collins PTOs.

>> I wonder
> >why.
> >
> Because tube rigs had RF gain controls that worked.

We know of one current-tech el cheapo ricebox which has a real RF gain control eh James?

> Lots of off-the-shelf Part 95 devices that only need some application
> engineering to get 'em going. When the radio and antenna are cheaper than
> running the cable, guess what gets installed.

One more example of a radio "technology" which is out there and in established commercial use which has little or no application in ham radio.

Been to Phoenix several times, whatta beautiful place.

My last trip there was the result of one of the most moronic & hilarious airline screwups I've ever gotten into and I've done some of those lemmee tellya . . I was on a biz trip with several fellow DuPont engineering types to Denver via the USAir Dayton hub. The flight outta Philly was late departing but they held our connecting flight at it's Dayton gate until we arrived.

So everybody gets told stay in their seats until all us Denver-bound fares got off to jump into the Denver flight. We really hoofed guided all the way by a phlanx of USAir overstimulated young podium area eager beavers who waved the usual formalities to get us loaded and outta Dayton. We were still trying to find our seats when the right seat announced he was turning onto the runway.

So we're finally strapped in and catching our breaths when the broad with the mic pipes up on the intercom "Welcome aboard Flight XXX for Phoenix". I could not supress my sneer, we wuz on our way to Phoenix instead of Denver thankew once more UselessAir for another monumental screwup.

Denver was completely socked in for the next couple days so we got to lounge about in Phoenix in the plush digs USAir provided on their dime. Swim-up bar with the centefold barkeeps in bikinis . . barely. Mostly barely. Uh-HUH.

I put a ticket to ride a 4:30 AM "departure" thru the desert on a horse (with a name) on the hotel tab for a run to the top of a mesa. Got to live a purple Arizona sunrise. Damned near got religion. Wash my mouf.

Oh fer cripes sake . . . 100 kHz . . yeah, OK, wunnerful, so those
comms were SS in the narrow technical sense. I are not spanked. That
is *not* the SS the Squiggys of the world were ranting about when they
made the big stink about it here. They were raging about high-speed
wideband Part 15 technology with suds, Internet portals, yakity-yak.
Which were gonna save ham radio from us 20 wpm PCTA Luddites and goose
the numbers up with battalions of young nocode geeks.

> >

No not you whining, the whiners who are claiming that SS can't be
implemented "properly" under the present regs.

>
> The bands above 30 MHz are not "line of sight" by any means.

Eccch . . I've hit 2m machines in the Carolinas from Philly with a
first-floor coaxial dipole hung under the balcony above me. Imagine

what I could do to an SS node in the Carolinas from here . .

> I'm sure there's some amateur SS being done by hams right now. But it's not
> being done by those who moan and whine about "new modes and modulations" on
> newsgroups.

I wouldn't bet on either of those suppositions but time will tell.
There's been some futzing with this "digital voice" thing. Whatever
that is. Sounds like another Collision City.

> >Looks to me like the problem is actually based in the investment and
> >coordination requirements inherent in the implementation of SS on any
> >useful scale which are far beyond the ability of hams to pull
> >together.
>
> Why do the investment and coordination if it's not necessary?

Chicken & eqq enigma. If they don't do the investment & coordination
it ain't gonna work. If there aren't enough interested hams clumped
together in the neighborhood to fund, coordinate and run SS the
investment & coordination ain't gonna happen either. On a strictly
point-to-point basis SS would work but so do 2m FM simplex for voice
and the Internet for binaries.

>
> Military use of SS makes sense because of the need for secrecy and making DF

> avoidance without coordination. Again, hams have no need of either.

Agreed.

>
> All that's left is process gain.

Ya mean like cw & PSK31?

It might be noted that with very few exeptions there has not been a
mode used on the vhf/uhf ham bands which was not at least tried first
on HF in volume. Packet is a kissin' cousin of RTTY with repeaters and
ATV simply needs more bandwidth than is available on the ham bands
below 30Mhz.

> >
> >I wuz there during the repeater wars . . Can you imagine "SS wars" . .
> >?
> >
> >Cartoon fodder.
>
> "Imagine if they gave a war and nobody showed up".

Would prolly be the case but the FCC is not willing to let it even get
off the ground, once burned twice learned.

>
> What the pundits forget is that the driving force behind most hams' mode choice
> is simply fun. If a rig or mode is fun to do, hams will use it, within the
> rules. If it's no fun, all the hand-wringing and preaching to the masses will
> have no effect.

Absolutely. Lotta other considerations matter too. Cost is a biggie.
Complexity is another. The number of users per mode is another one.
Per a number of previous posts I don't prefer cw because I "enjoy" cw,
I use cw because of it's superior performance in weak signal work both
ways and it's widespread use. I don't yak at length with cw, if I
wanna yak I take up the bands to do my motormouthing.

> The "transistor" was/is a whole series of inventions, not just the one
> mentioned above.

I plead guilty to the use of "excessive allegory" to keep the
bandwidth down. One transistor inventor, all hollow state diodes are
6H6s, all hollow state triodes are 6B6s, etc. I don't place much value
on being anal literal, RRAP ain't an "engineering office".

> From an amateur point of view, transistors became competitive
> with tubes in some applications in the 50s,

Bloody few.

> while in other applications they
> have still not completely displaced tubes.

Bloody few again. Specifically in ham radio? I can cite a number of
Big Guns right around here who run the legal max output with ease on
HF and there ain't a single tube anywhere in their shacks. None of my
four HF/2m xcvrs even going back to the 1980 Kenwood clunker have any
tubes in 'em. Not counting the Collins and Drake boat anchors buried
in dead storage. The highest P/S voltage I need today is the 34vdc for
the clunker PA "B+". No 866s req'd. Or permitted at this point.

> Amateur requirements are often
> different than those of other services, so exact comparisons with, say,
> military or broadcast practice can be misleading.

Right, and that's why those who don't have any actual hands-on time in
the assorted flavors of ham radio have a bad time being relevant
around here.

> For example, preventive
> maintenace tube replacement cost in a 24/7 broadcast station can make a

That gets down to the individual's personal economics. There are a
number of big ham solid state 1.5 - 2kW amps out there today but
they're much more expensive than the equivalent tube amaps. By a
factor of two or three so far.

The big trick the solid state amps bring to the game is no-tune quick
bandhopping which can't be done as well if at all with ham tube amps.
Relay-switched lo-Z bandpass filters vs. high-Z tuned tank circuits
with knobs ya gotta dork with, etc. There are flocks of hams who have

taken the big hits in their wallets to buy that capability.

> >> was the lack of power. 100 watts output called for tubes, not
> >> transistors in the late 60s....at least for ham gear.
>
> The main factor in ham gear was/is $ per watt of first-cost.

I disagree with that. Profusley. Pricey performance & features in all respects obviously sold big back when and still sell big today. You don't think for one minute that I'd buy an MFJ amp just because they're cheap do ya?

>> the lousy dynamic ranges of solid state devices
> >vs. tubes particularly in HF receiver front ends. Solving that one
> >didn't happen until close to 1980. Which came three decades after
> >Shockley's transistor.
>
> Yup. Many early solidstate rxs were inferior in BDR and IMDDR to the tube sets
> they replaced.

There were a lotta misguided attempts to jump into solid state HF ham rcvrs before the state of the art could be performance-competitive vs. tubes. The HRO-500 was the disaster radio which sank National's boat for instance.

> Doesn't just apply to ham gear, either. But over time the
> solidstate designs improved until they were almost as good in BDR amd IMDDR as
> tube designs of a few decades earlier.

The design of the devices improved.

> Smaller and less expensive, too.

Plus the current programmable chipsets allow quick & easy features to be added which we didn't have in toob days either. 40-bit DSP with 6H6s . . RIGHT!

Debate? From what I have seen, this thread seems to be more akin to an
attack on Mr. Heil than a 'debate'. On, forgive me Dee D. Must I have a
formal invitation to join in, and just who issuses said invitations? It is
always nice to have acceptance from one's peers. Or woudn't you know about
that?

Oh I dunno, Brucie passed it, so any four year old should be able
to with flying colors. Still claiming you 'busted' some ham ulx?

As a participant in the debate, I want a good debate. Name calling and inappropriate language detract from any debate. Since I participated in the debate, it is appropriate to comment on the standards of that debate. Thus it would not be meddling. Now if I had sat on the sidelines and had only commented on that issue, it would be meddling.

I understand where you are active. I also understand your view that,
should you ever decide to operate on 40m, you can look up your
authorized segment and mode information. If you ever decide to use
morse, you can look up the characters for what you intend to send and
you can write down the dits and dahs sent you by others and look 'em up
later.

I've watched, listened and read. I've yet to hear anyone agree with
your extended definition. I've heard nothing about them not feeling

bound by the definitions of words. Additionally, I've heard nothing from the politicians on whether they also misunderstood what you wrote earlier.

The fact that you haven't seen it doesn't mean it's impossible. I've never seen a human-powered aircraft actually fly, but I know it's possible.

Child prodigies do some amazing things. Passing the tests doesn't mean that all of the material is thoroughly understood, just that the person taking the test got at least 74% of the multiple-choices correct.

Accusing the VECs of falsifying test results is pretty serious stuff, btw. Do you have any solid evidence?

Mr Engineer had no information on end-fed antennas. He kept telling
me about a ground maounted, bottom-fed antenna at his old house, but
none were endfed.

You're the one full of it.

You are my peanut gallery.

Now tell Bruce how its possible for him to have gotten an Extra when
he was 4 years old by takeing the written exam only.

I gotta see this.

CB-talk fits you well, Kelley. But I don't recall Dick coming forward
with any information on end-feeding a half-wave antenna. Apparently,
he doesn't know much about it. And neither did you.

So far I count two little men. Anyone else?

Q. What do you call a basement full of anti-coders?
A. A whine cellar.

Q. Why did the anti-coder scale the chain-link fence?
A. To see what was on the other side.

Q. What are the worst six years in an anti-coder's life?
A. Third Grade.

Q. Why did the anti-coder smear Preparation H all over his VHF
antenna?

A. He said he had to get ready for the skip DX during the hemmorhoid
shower.

Q. A one-armed anti-coder is hanging from a cliff with his one arm.
How
do you make him fall?
A. Wave.

Q. Why did the anti-coder get fired from the M&M factory?
A. He was throwing out all the W's.

Q. What do you call a skeleton of an anti-coder in the closet?
A. Last year's hide and go seek winner.

Q. Why do anti-coders need to work seven days a week?
A. So you don't have to retrain them on Monday.

Q. Why did the anti-coder keep a coat hanger in the back seat?
A. In case he locks the keys in his car.

Q. Why did the anti-coder get so excited after he finished a jigsaw
puzzle in only 6 months?
A. Because on the box it said "From 2-4 years."

An anti-coder walks into a radio store and tells the salesman that he
would like to buy that new HF rig over in the corner. The salesman
says, "Sorry, we don't sell to anti-coders". He leaves, goes home,
puts
on a brown wig and sunglasses and goes back to the store and tells the
salesman he wants to buy that new rig over in the corner. He says,
"Sorry, we don't sell to anti-coders." So again, he goes home, puts
on
a black wig, sunglasses and a hat and tries to buy the rig again.
Again
the salesman tells him they don't sell to anti-coders. Finally he
asks,

"How do you know I'm a anti-coder?" and the salesman replies, "Because that's not a rig, it's a microwave oven."

Q. What is it called when a anti-coder blows in another anti-coder's ear?
A. Data transfer.

Q. An anti-coder ordered a pizza and the clerk asked if he should cut it in six or twelve pieces.
A. "Six, please. I could never eat twelve pieces."

Q. What's the difference between an anti-coder and garbage?
A. Garbage gets taken out at least once a week.

Q. How does an anti-coder spell "farm"?
A. E-I-E-I-O

Q. Why don't anti-coders eat pickles?
A. They can't get their head in the jar.

Q. How do you amuse a anti-coder for hours?
A. Write 'Please turn over' on both sides of a piece of paper.

Did you hear about the anti-coders that were found frozen to death in their car at a drive-in movie theater?
They went to see "Closed for the Winter."

Q. Why did the anti-coder stare at the can of frozen orange juice for two hours?
A. Because the can said "concentrate" on it.

Q. What is the anti-coder doing when he holds his hands tightly over him ears?
A. Trying to hold on to a thought.

Q. How does an anti-coder commit suicide?
A. He gathers his welfare checks into a pile and jumps off.

Q. How do you plant dope?
A. Bury an anti-coder.

Q. How do you make a anti-coder's eyes light up?
A. Shine a flashlight in his ear.

Q. Why do anti-coders hate M&Ms?
A. They're too hard to peel.

Q. How do you keep an anti-coder busy?
A. Give him a bag of M&Ms and tell him to alphabetize them.
Q. Why does it work?
A. Because he'll say, "Does 3 come before E or does it go between M and
W?"

Q. What job function does an anti-coder have in an M&M factory?
A. Proofreading.

Q. Why can't an anti-coder make KOOL-AID?
A. Because he can't fit 8 cups of water in the little packet.

Q. What do you call 10 anti-coders at the bottom of the pool?
A. Air bubbles.

Q. What does Star Trek's "Bones" McCoy say before he performs brain surgery on an anti-coder?
A. "Space. The final frontier......".

Q. Why did the anti-coder put ice cubes in the freezer?
A. So he could keep the freezer cold.

Q. How many anti-coders does it take to play Hide and Seek?
A. One.

Q. Why couldn't the anti-coder write the number ELEVEN ?
A. He didn't know which ONE came first.

Q. How did the anti-coder burn his nose?
A. Bobbing for french fries.

Q. How can you tell if an anti-coder's been using the computer?
A. There's saliva all over the keyboard.

Q. How can you tell when a FAX had been sent from an anti-coder?
A. There's a postage stamp on it.

Q. Why does an anti-coder only change a baby's diapers every month?
A. Because it says on it , "Good for up to 20 pounds."

Q. Why do anti-coders write "TGIF" on their shoes?
A. Toes go in first.

Q. Why don't anti-coders make good pharmacists?
A. They can't get the bottle into the typewriter.

Q. What is the difference between an anti-coder and "The Titanic"?
A. They know how many men went down on "The Titanic."

Q. What does an anti-coder say when you ask him if his turn signal is on?
A. "It's on. It's off. It's on. It's off. It's on. It's off…."

Q. What do you call 4 anti-coders lying on the ground?
A. An air mattress.

Q. What do you call 10 anti-coders standing ear to ear?
A. A wind tunnel.

Q. What do you call 15 anti-coders in a circle?
A. A dope ring.

Q. What do you call a zit on a anti-coder's ass?
A. A brain tumor.

Q. How many anti-coders does it take to make chocolate-chip cookies?
A. Ten: One to mix the dough and nine to peel the Smarties.

Q. Why did the anti-coder tip-toe past the medicine cabinet?
A. So he wouldn't wake up the sleeping pills.

Q. Why did the anti-coder drive into the ditch?
A. So he could finally turn the blinker off.

Q. Why did the anti-coder try and steal a police car?
A. He saw "911" on the back and thought it was a Porsche.

Q. Did you hear about the anti-coder skydiver?
A. He missed the Earth.

Q. Where do anti-coders go to meet their relatives?
A. Palm Beach.

Q. How many anti-coders does it take to play tag?
A. One.

Q. What happened to the anti-coder tap dancer?
A. He slipped off and fell down the drain.

Q. What did the anti-coder say when he looked into a box of Cheerios?
A. "Oh look! Donut seeds!"

Q. What did the anti-coder name a zebra?
A. "Spot."

Q. Why can't anti-coders change dial lamps?
A. They keep breaking them with the hammers.

Q. What is the definition of "gross stupidity"?
A. 144 anti-coders.

There was an anti-coder driving down the road listening to the radio.
A ham was telling anti-coder joke after anti-coder joke until the
anti-coder
was mad enough that he turned the radio off. A mile down the road, he
saw
another anti-coder out in a corn field in a boat, rowing. The anti-
coder
stopped
his car jumped out and yelled, "You dummy, it's anti-coders like you
that
give us all a bad name. If I could swim I'd come out there and give
you

what's coming to you!"

Q. What is the difference between a dead anti-coder in the road, and
a

dead skunk in the road?
A. There are skid marks in front of the skunk.

Q. What did the anti-coder say about anti-coder jokes?
A. He said they might offend some Puerto Ricans.

Q. Why can't anti-coders make ice cubes?
A. They always forget the recipe.

A ham was telling an anti-coder joke to someone who happened to be an anti-coder. Halfway through, the anti-coder interrupts him and says, "Don't you know I'm an anti-coder?"

"Oh, " the ham replied, "do you want me to start over and talk slower?"

Bruce
I understand that part. I'm just saying if it's for
the CBplussers who don't want to do any work
to get a free ham license, they'll just whine cause
they have to register to join the Yahoo group.
You know signing up is to hard of work for them!

^^^^^^^^^^^^^^^^

Wrong service. Ham radio is to have no pecuniary interest, i.e., no business use. What radio service did they have back in 1928 for 2 way business use?

Source record: 56965

Brucie was headed home from his trip over Thanksgiving, where he allegedly 'busted' some hams, (yea right) and called one of his good cb buddies to tell him he would be home soon. However it was the next day before brucie arrived looking completely worn out. His cb good buddy asked why it took him so long to make a trip that should have only taken about two hours. Brucie replied, "well, I kept seeing these signs beside the road that said, 'Clean Rest rooms Ahead', boy, I did not know there were so many roadside rest rooms to be cleaned."

Brucie finally traded in his old car for a new one. Brucie asked the salesman what that other little lever on the side of the steering wheel was for. The salesman explained that it was for the turn signals. Brucie asked, "how to you dim the lights, I don't see a dimmer switch on the floor board?". The salesman showed Brucie that all he had to do was flip the turn signal lever back and forth to dim and brighten the lights.
A few days later Brucie brought the car back in and asked the salesman if he could get a dimmer switch installed on the floor board like his old car had. The salesman was a bit puzzled and asked why. Brucie replied, "Because when I try to dim the lights I keep getting my foot tangled in the steering column".

Q. What do you call a basement full of anti-coders?
A. A basement full of brucie and his fellow cbers.

Q. Why did brucie scale the chain-link fence?
A. To see what was on the other side.

Q. What were the worst six years in brucie's life?
A. Third Grade.

Q. Why did brucie and his good buddy cb neighbor smear Preparation H all over his VHF antenna?

A. He said he had to get ready for the skip DX during the hemmorhoid
shower.

Q. Brucie is hanging from a cliff with his one arm.
How do you make him fall?
A. Wave.

Q. Why did brucie get fired from the M&M factory?
A. He was throwing out all the W's.

Q. What do you call a skeleton of brucie in the closet?
A. Last year's hide and go seek winner.

Q. Why does brucie need to work seven days a week?
A. So you don't have to retrain him on Monday.

Q. Why did brucie keep a coat hanger in the back seat?
A. In case he locks the keys in his car.

Q. Why did brucie get so excited after he finished a jigsaw
puzzle in only 6 months?
A. Because on the box it said "From 2-4 years."

Brucie walks into a radio store and tells the salesman that he
would like to buy that new HF rig over in the corner. The
salesman
says, "Sorry, we don't sell to cbers". He leaves, goes home,
puts
on a brown wig and sunglasses and goes back to the store and
tells the
salesman he wants to buy that new rig over in the corner. He
says,
"Sorry, we don't sell to cbers." So again, he goes home, puts
on
a black wig, sunglasses and a hat and tries to buy the rig again.
Again
the salesman tells him they don't sell to cbers. Finally he
asks,
"How do you know I'm a cber?" and the salesman replies, "Because
that's not a rig, it's a microwave oven."

Q. What is it called when brucie blows in another cber's
ear?
A. Data transfer.

Q. Bricie ordered a pizza and the clerk asked if he should cut
it in six or twelve pieces.
A. "Six, please. I could never eat twelve pieces."

Q. What's the difference between brucie and garbage?
A. Garbage gets taken out at least once a week.

Q. How does an brucie spell "farm"?
A. E-I-E-I-O

Q. Why dosen't brucie eat pickles?
A. He can't get his head in the jar.

Q. How do you amuse brucie for hours?
A. Write 'Please turn over' on both sides of a piece of paper.

Did you hear about brucie and his cb buddies that were found
frozen to death in
their car at a drive-in movie theater?
They went to see "Closed for the Winter."

Q. Why did brucie stare at the can of frozen orange juice for
two hours?
A. Because the can said "concentrate" on it.

Q. What brucie doing when he holds his hands tightly over
him ears?
A. Trying to hold on to a thought.

Q. How does brucie commit suicide?
A. He gathers his welfare checks into a pile and jumps off.

Q. How do you plant dope?
A. Bury brucie.

Q. How do you make brucie's eyes light up?
A. Shine a flashlight in his ear.

Q. Why does brucie hate M&Ms?
A. They're too hard to peel.

Q. How do you keep brucie busy?
A. Give him a bag of M&Ms and tell him to alphabetize them.
Q. Why does it work?
A. Because he'll say, "Does 3 come before E or does it go between
M
and W?"

Q. What job function does brucie have in an M&M factory?
A. Proofreading.

Q. Why can't brucie make KOOL-AID?
A. Because he can't fit 8 cups of water in the little packet.

Q. What do you call brucie and 9 of his cb buddies at the bottom
of the pool?
A. Air bubbles.

Q. What does Star Trek's "Bones" McCoy say before he performs
brain
surgery on brucie?
A. "Space. The final frontier......".

Q. Why did brucie put ice cubes in the freezer?
A. So he could keep the freezer cold.

Q. How many of brucie and his cb buddies does it take to play
Hide and Seek?
A. One.

Q. Why couldn't brucie write the number ELEVEN ?
A. He didn't know which ONE came first.

Q. How did brucie burn his nose?
A. Bobbing for french fries.

Q. How can you tell if brucie's been using the computer?
A. There's whiteout on the monitor.

Q. How can you tell when a FAX had been sent from brucie?
A. There's a postage stamp on it.

Q. Why does brucie only change a baby's diapers every month?
A. Because it says on it , "Good for up to 20 pounds."

Q. Why does brucie write "TGIF" on their shoes?
A. Toes go in first.

Q. Why doesn't brucie make a good pharmacists?
A. He can't get the bottle into the typewriter.

Q. What is the difference between brucie and "The Titanic"?
A. They know how many men went down on "The Titanic."

Q. What does brucie say when you ask him if his turn signal is on?
A. "It's on. It's off. It's on. It's off. It's on. It's offâ□¦."

Q. What do you call brucie an 3 of his cb buddies lying on the ground?
A. An air mattress.

Q. What do you call brucie and 9 of his cb buddies standing ear to ear?
A. A wind tunnel.

Q. What do you call brucie and 14 of his cb buddies in a circle?
A. A dope ring.

Q. What do you call a zit on brucie's ass?
A. A brain tumor.

Q. How many of brucie and his cb buddies does it take to make chocolate-chip cookies?
A. Ten: One to mix the dough and nine to peel the Smarties.

Q. Why did brucie tip-toe past the medicine cabinet?
A. So he wouldn't wake up the sleeping pills.

Q. Why did brucie drive into the ditch?
A. So he could finally turn the blinker off.

Q. Why did brucie try and steal a police car?
A. He saw "911" on the back and thought it was a Porsche.

Q. Did you hear about brucie the skydiver?
A. He missed the Earth.

Q. Where does brucie go to meet his relatives?
A. Palm Beach.

Q. How many of brucie and his cb good buddies does it take to
play tag?
A. One.

Q. What happened to brucie the tap dancer?
A. He slipped off and fell down the drain.

Q. What did brucie say when he looked into a box of Cheerios?
A. "Oh look! Donut seeds!"

Q. What did brucie name a zebra?
A. "Spot."

Q. Why can't brucie change dial lamps?
A. They keep breaking them with the hammers.

Q. What is the definition of "gross stupidity"?
A. brucie and 143 of his cb good buddies.

A cber was driving down the road listening to the radio.
A ham was telling cb joke after cb joke until the
cber
was mad enough that he turned the radio off. A mile down the
road, he
saw
another cber out in a corn field in a boat, rowing. Brucie

I'm gonna tell you again to stop posting in my name. I will be contacting AOL this week. To the people using my name in vain on AOL, when I get done with you, you are gonna wish you never created that screen name.

For the record - for everyone else.

1. I use MSN as my e-mail account
2. I stopped using AOL back in June 2001
3. I no longer use Terranews.com for my Usenet access. (MSN does not provide Usenet access)

So anyone else using those above ISP's - you can tell it is a fake Lloyd.

I would appreicate any help in stopping the abuse of my greatness.

Lloyd Davies - The real McCoy!

Classic market strategy. It was the '520s and '101s that took the bread-and-butter market away from the Heath-and-other-lowpriced crowd. Then when '520/101 owners wanted something better, they were already used to buying Yaecomwood, and were not averse to sinking big bucks into a TS-940 or FT-1000 or whatever.

This is where US mfrs like Cosmos and Squires-Sanders went all wrong. They tried to get into the ham market at the top, offering one or two top drawer items. While they were good items, not many hams were going to risk their entire radio piggybank.

Remember the above paragraph when the naysayers declare that contesters and
dxers don't contribute anyhting to the 'state of the art', whatever THAT is.
The push for better ham rigs has been driven by the "more performance
regardless of cost" types. Without those folks, Kenwood would still be selling
TS-440s or an updated equivalent - and nothing better. Which may be why some
folks hate 'em so much.

Here are the number of unexpired FCC ARS licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of December 1, 2002:

Novice - 36,313 (decrease of 13,516)
Tech - 247,195 (increase of 41,801)
Tech Plus - 74,235 (decrease of 54,625)
General - 139,684 (increase of 27,007)
Advanced - 84,431 (decrease of 15,351)
Extra - 103,112 (increase of 24,362)
Total - 684,970 (increase of 10,118)

Which tells me that 75% of Novices are inactive. Those who are active did a
quick upgrade to General. Why not?

>
> Tech - 247,195 (increase of 41,801)

This says that 41,801 newbies are awaiting full no-code HF. Along with a few of
the other 241,000. The rest couldn't care less about ham radio, having found it
"boring" and have already dumped their HT's.

>
> Tech Plus - 74,235 (decrease of 54,625)

Obvious- glom that easy General. Or why stop there? Extra's just a few Question
Pool memorizations away at this point. And most of the other 74,235 have just
lost interest.

>
> General - 139,684 (increase of 27,007)

Ditto up from Tech Plus.

>
> Advanced - 84,431 (decrease of 15,351)

It distresses to see that 81% of Advanced are not interested enough to bother
with the same few question pool memorizations "required" by General. Could so
many of them be inactive? Probably.

>
> Extra - 103,112 (increase of 24,362)

This is one of the more surprising and disturbing stats. What it tells me is
that interest in ham radio isn't all that great even among many licensed hams.
See below...

>
> Total - 684,970 (increase of 10,118)

ARRL membership hangs around 170K, as I recall. If we are generous and consider that a half of active hams hold ARRL membership, then about half of all licensees are inactive and uninterested in whatever happens in/to ham radio.

To me the license stats above, coupled by the attitudes and lack of motivation of some of the licensed posters here who have shown no interest in taking advantage of the easier upgrades, seem to pretty well confirm that supposition. Seems to them ham radio consists of posting drivel to rrap.

So......stats are stats, but they reveal a lot. Which is to say that they are often very misleading.

I'm one of those 41,801 newbies and I'm not "awaiting full no-code HF". It's a bit difficult to lump over 41,000 people into one monolithic group and accurately attach the same motives to them all.

Jackie

Bruce, take a deep breath. If I can't say I could pass the Extra exam
when there was a 20wpm Morse code exam in-place, you can't either.
That's how it works, unless you embrace the PCTA Double Standard.

Was there a 20wpm Morse code exam in-place when you were 4 years old?

Then too bad for you.

You are absolutely right. I should have been less stingy with my verbiage and
said "most of whom.......".

Unfortunately I fear there are far too few like you. Of course I could be
wrong, but experience tells me that I'm not.

All of which has been possible for a long time. And which got easier
with the elimination of the "record all content" rule three years ago.

> Which were gonna save ham radio from us 20 wpm PCTA Luddites and goose
> the numbers up with battalions of young nocode geeks

There's been no code test needed for full access to all hambands for
the past 11-1/2 years. And a lot of the shouting was about SS on HF.
Don't you remember how it was demonstrated that a single QRP DSSS
station on, say, 15 meters would raise the apparent narrowband noise
level for miles around?

Simple thought experiment:

Station A is running 250W (avg) ERP to work Station B on SSB, (2.5 kHz
wide. Signals are good copy but reducing power would degrade the
signals unacceptably.

Stations C, D, E, etc. hear Station A S9+40 dB, because of better
paths to A. But since they have decent receivers, they can operate SSB
right down to the noise level (typically S0) on the same band as A
with no problems.

But suppose A and B decide to switch to DSSS. Let's say that the
spreading method spreads their signals essentially equally over 250
kHz of the band.
Now since the power that was once concentrated in 2.5 kHz is spread
over 100 times that amount of spectrum, the amount of power in a 2.5
kHz slice is reduced by 100 times - 20 dB. So instead of a single
S9+40 SSB signal 2.5 kHz wide, there's a roar of S9+40 noise 250 kHz
wide.

Suppose that the process gain from spreading permits A to reduce power
by 100 times (another 20 dB). The noise is then reduced to S9 over the
250 kHz wide slice. Stations C, D, E and any others with similar
propagation just had their S0 noise level raised to S9 by a single QRP
station. Thanks a lot.

FHSS? If it's slow, maybe your noise blanker will take it out. If it's
fast, think key clicks.

The pundits had no answer to the above thought experiment except that
C, D and E should go SS or leave the air.

> > >Non-sequitor, we have a whole litany of regulatory restrictions we

I don't see any of 'em trying to fix the rules. Or use the existing
rules, either. Too busy trying to up the countries total, I suppose.

Guess who was a major player in the '99 changes? ARRL. FCC got maybe
two dozen comments.

> that is. Sounds like another Collision City.

Naw, the digital voice stuff is narrowband and for-real. Main problem
is potential digital-tower-of-Babel, and the nature of the signal
trying to be sent.

You watch, somebody like G3PLX will come up with a freeware soundcard
implementation of digivoice that sounds good and works well in
SSB-or-less bandwidth.
>
> > >Looks to me like the problem is actually based in the investment and

I think one reason ATV and SSTV remain niche modes is the difficulty
of coming up with large amounts of visual stuff to send.

> Complexity is another. The number of users per mode is another one.

All of which come down to various "fun" metrics. What fun is something
that's so expensive nobody can afford it, or so complex it is hard to
use? Or which only a few folks use at all?

> Per a number of previous posts I don't prefer cw because I "enjoy" cw,
> I use cw because of it's superior performance in weak signal work both
> ways and it's widespread use. I don't yak at length with cw, if I
> wanna yak I take up the bands to do my motormouthing.

That's you. I like a good CW ragchew with an op that knows how ta make
the paddles sing. Different communications medium, that's all.

Like the way opera should be in Italian - sings better. Or the way
rock music is meant to be played on Fenders and Gibsons, while folk
music is meant to be played on Martins (guitars).

Oh, contraire, contraire Jackie. Just give it a little time and you'll see Dick fits that mold very well. He likes lumping whole courses of people together. He's got a very broad paint brush because it's too hard to paint where he needs to.

Ya see, Jackie? He tried to let go of that paint brush, just for
impression's sake of course. But, he just couldn't. First, he tries with
the use of "most of whom" and I'm sure he sat there and it really bugged
him; so he had to add back in with his "far too few like you."

Point also is that there's no need for someone to upgrade unless they want
to.<<<<period

Not everyone revolves their whole life around ham radio like you
and some others dickie. Most hams have a real life and treat ham
radio for what is is, a hobby to be pursued at leisure and have
fun instead of making it the only thing they have to live for.

Now here is an idea for all. Hams have a
WAS and a WAC awards. How about we
come up with a new award for CBplussers,
a WAI award. The best part of it would be
that NG contacts would count. So what do
you think about a new award? Oh BTW if
you haven't figured it out yet, the WAI
stands for Worked All Idiots! And it shouldn't
take anyone long to achieve it in here!

;^)

Why even bother, Kimshe? You say repeatedly that your ONLY interest in ham
radio has ever been is 2 meters and you haven't been on that in so long you
don't remember the last time. Why even keep a license and claim -pretend- to be
a ham?

For damn sure you're NOTHING like Jackie. She's actually interested in the
hobby.

Not that simple. An existing Novice has to pass both new Elements 2
and 3 to get a General. Plus get to a VE session, etc.

> > Tech - 247,195 (increase of 41,801)
>
> This says that 41,801 newbies are awaiting full no-code HF.

Nope. Since April 15, 2000, FCC has been renewing Tech Pluses as
Techs. And a Novice who passes Element 2 but not Element 3 gets a Tech
(new/upgrade from Novice/renew) (on FCC database, anyway). So there
are three ways to get a Tech but only two ways to drop a Tech (upgrade
or expire)

> Along with a few of
> the other 241,000. The rest couldn't care less about ham radio, having found it
> "boring" and have already dumped their HT's.

Possibly. Or they are simply satisfied with VHF/UHF and don't see any
reason to go beyond it.
>
> > Tech Plus - 74,235 (decrease of 54,625)
>
> Obvious- glom that easy General. Or why stop there? Extra's just a few Question
> Pool memorizations away at this point. And most of the other 74,235 have just

Again, FCC has been renewing Tech Plus as Tech since the
restructuring. Even without any other changes, there will be no more
Tech Pluses after April 2010.
>
> > General - 139,684 (increase of 27,007)
>
> Ditto up from Tech Plus.

Or Novice, or newbies. If I was a newbie today, I'd probably go
straight for General. Or Extra.

> > Advanced - 84,431 (decrease of 15,351)

Or they just haven't got around to it yet. If somebody is happy with
Advanced privs, the trip to a VE session may not be worth it.

That's about my guesstimate. With 10 year license terms, that's to be
expected.
>

How many people post here regularly? They're in no way a
representative sample.

Here's the big question: Why waste your time arguing with the few who
post such drivel? There are lots of other folks to debate.

Main points of my posting these numbers:

1) Discussion
2) They will be in USENET archives essentially forever

Or they are perfectly happy with the privileges of UHF/VHF, having
found that antenna restrictions and covenants make HF too problematic
for the hobbyist.

> > Tech Plus - 74,235 (decrease of 54,625)
>
> Obvious- glom that easy General. Or why stop there? Extra's just a few Question
> Pool memorizations away at this point. And most of the other 74,235 have just

Your answer to the Novice decrease, "Why not?" makes sense here as
well. But Novice, this category and Advanced have another common
thread -- there will not be any new assignments under the current
regulations. Of course the numbers will drop.

> > General - 139,684 (increase of 27,007)

> many of them be inactive? Probably.

I'm not sure what this explanation means. Haven't all Advanced already
moved beyond the General pool? Or are you suggesting that the dormant
Advanceds should be taking the _Extra_ now that the WPM has be
flattened? Again, your "Why not?" is legitimate, but so is the
response, "Why?" What do they gain? And perhaps HF (with or without
code) is not the attractive participation arena that it once was.

And I wonder whether HF provides enough interest in itself to
contribute to General and Extra numbers higher than what we are
seeing.

>6H6s, all hollow state triodes are 6B6s, etc. I don't place much value
>on being anal literal, RRAP ain't an "engineering office".

Kellie, don't try any more bluffing and bluster about "engineering" anything. You might snow-job some youngster you are trying to impress with amateur guru-ism but you can't fool the hardware radio people...not even just in amateur newsgroups.

Vacuum tube types 6H6 and 6B6 were already OBSOLETE before you got into amateur radio. Those are pre-WW2 octal base types and the diode-triode 6B6 has a grid cap! Those are over 60 years old!

If you wish to classify ignorance as "anal literal" then that's your technical speed...but quite incorrect.

>> From an amateur point of view, transistors became competitive
>> with tubes in some applications in the 50s,
>
>Bloody few.

Now, for the time up to the mid-1950s, that IS correct. Aside from the mention of the Raytheon CK722 which was highlighted in ham store floor display stands in 1956, can you name ANY transistor of any kind other than the CK722?

>> while in other applications they
>> have still not completely displaced tubes.
>
>Bloody few again.

Sorry, solid-state electronics has COMPLETELY taken over all active device functions in today's manufactured amateur radio transceivers. Cold-cathode fluorescent displays aren't "tubes."

>Right, and that's why those who don't have any actual hands-on time in
>the assorted flavors of ham radio have a bad time being relevant
>around here.

No problem with Kellie...he doesn't seem to know the insides
of ANY amateur radio equipment of ANY era. :-)

>> For example, preventive
>> maintenace tube replacement cost in a 24/7 broadcast station can make a
>> solidstate transmitter economically advantageous, while the ham who
>transmits a
>> few hundred hours per year can run a tube transmitter until the bottles
>fail.

Did Mr. N2EY ever work in the engineering department of ANY
broadcast station?

Vacuum tubes can, and have failed on-the-air in the majority of
BC stations which are NOT 24/7 licensed stations.

It is NOT the "tube replacement cost" but the AIR TIME, the lost
time paid by advertisers who keep the station financially afloat.
Go find a rate card for any station and figure it out.

>That gets down to the individual's personal economics. There are a
>number of big ham solid state 1.5 - 2kW amps out there today but
>they're much more expensive than the equivalent tube amaps. By a
>factor of two or three so far.

That might have been true 20 years ago. High-power PAs using
tubes need HV rectifiers and HV transformers, all of which are
EXPENSE items compared to much-lower-voltage supplies for
RF transistors. On modular constructions yet to be "pioneered"
for "ham use," one module can fail completely and all the others
can handle what remains of the load.

>The big trick the solid state amps bring to the game is no-tune quick
>bandhopping which can't be done as well if at all with ham tube amps.
>Relay-switched lo-Z bandpass filters vs. high-Z tuned tank circuits
>with knobs ya gotta dork with, etc. There are flocks of hams who have
>taken the big hits in their wallets to buy that capability.

You forgot something, but permissible since you only operate
CW. :-)

A linear high-power PA can ALSO handle ANY mode on HF.
No need for that big-mama audio power amplifier to do the
equivalent of plate-modulating the RF final for DSB AM.

The 1955 era military T-195/GRC-19 put out 100 W on HF
from a mobile mounting platform...and had automatic tuning
of both the PA and the antenna. It also consumed about
1100 W from the vehicle electrical system in doing that
with tubes. Wow, there's "efficiency," right? :-)

>There were a lotta misguided attempts to jump into solid state HF ham
>rcvrs before the state of the art could be performance-competitive vs.
>tubes. The HRO-500 was the disaster radio which sank National's boat
>for instance.

The latest-model National HRO series receivers were being
sold to the USN in 1970. The HRO series tried to preserve
the "plug-in bandchanging" concept from the late 1920s into
the 1970s. National fared better by keeping up with the times
in government contracts for communications equipment, some-
thing they shifted to shortly after WW2 was over. Where
are the Hallicrafters sets? Bill Halligan's company eventually
went down. Where is RME? Where is the fabled Cosmo-
phone? DEFUNCT. Collins Radio still exists but they are
in the commercial-military market, gave up amateurism a
long time ago.

>Plus the current programmable chipsets allow quick & easy features to
>be added which we didn't have in toob days either. 40-bit DSP with
>6H6s . . RIGHT!

Whatinhell are you mumbling about "chipsets" in radios?
Try to educate yourself by learning that some/most of the
control functions are implemented through MICRO-
CONTROLLERS. Microcontrollers have PROGRAM and
DATA MEMORY...which can be changed as needed, but
design-manufacturing costs (to be competitive) puts the
memory on-board the microcontroller, "burned-in" in ROM.
The set maker can then charge a bundle to replace the
microcontroller IC. :-)

Microcontrollers CAN be made with EEPROM memory
on-board (Microchip's PIC series has many like that). The
microprocessor section isn't affected, only the data memory
and program instructions.

For the last time, the 6H6 dual diode vacuum tube was
OBSOLETE fifty years ago. Fifty years ago it was replaced
by the 7-pin miniature 6AL5 dual diode. Fifty years ago new
US Army Signal Corps radios were already using semi-
conductor diodes replacing vacuum-tube diodes (see AN/PRC-
6, -8, -9, -10) in FM discriminators.

DSP (Digital Signal Processing) uses "40 bits?!?" I don't
think so, ace. Try bit lengths from 12 to 20 for simple audio
filtering. CD-ROM decoders for voice and music use a
maximum of 24 bits in D/A conversion...and the various
Dolby sound systems. [I'm not going into CDMA in little
cellphone radios...the correction time for Kellie's postings
would take too long...:-)]

Hu? Technically...Kellie is plonked, BIG TIME. :-)

>(J1aguiar) writes:

>Accusing the VECs of falsifying test results is pretty serious stuff, btw. Do
>you have any solid evidence?

VEC test sessions are NOT monitored by anyone else DURING
testing. All that is monitored is the FCC scanning over test
RESULTS sent to them by the VEC teams.

Now go back to the famous/infamous ARRL news page that
showed two darling six-year-olds who were reported to have
"passed" written tests for Novice and Technician, respectively.
Now let any, repeat ANY, first-grade teacher look at the
written exam questions and decide for themselves whether
SIX YEAR OLDS can read those questions well enough to
answer even 70 percent of them. Just to READ them and
be able to choose any answer.

If you say "yes they can, because...[for any reason]" then
you MUST acknowledge that (1) You don't have slightest
familiarity with six-year-olds' reading/writing comprehension;
or (2) You think anything labeled/stamped/categorized as
"ham radio material" is somehow "special" over and above
any other subject matter; or (3) Any child who is "involved" in
any way with amateur radio is somehow a "gifted child" or a
"child prodigy." All of them are nonsense, ridiculous because
of a way-too-strong identification (beyond rationality) with
amateur radio.

ARRL was being over-indulgent in that bit of "news" fluff and
the VEC group who did the alleged testing thought it all
cutesy-poo from a kindly grandfatherly feeling to kiddies
(picture included one of the VEC proctors, smiling and no
doubt feeling "proud" over the kiddies' "accomplishments."

I accuse ARRL of very mild fraud on the part of condoning such
such things and hypocrisy on the implication of passing a ham
written exam as a sort of academic certificate. In the latter, if
barely-able-to-read-and-write six-year-olds can read and mark
with even reasonable comprehension, then the written exam is
a SHAM...even under pre-restructuring standards.

No MORE evidence is needed...the evidence has already been presented although sugar-coated with parental pride and the usual propaganda of ARRL being all good things to US amateur radio and never making mistakes or illegalities.

On the charge of deliberate FALSIFICATION for whatever reason, ARRL VEC is GUILTY.

I'm reminded of a very vociferous Extra that demands "Code For All"
because there might be an emergency where only Code will pull it off,
who couldn't get himself near enough to a factory built radio and
commercial power to accept an invitation to operate in his favorite
mode. There's just not enough interest.

Yep, them's the stats!

I'll bet Bruce has a CDL. Maybe Dixie, too.

Steve, go check out some "Kelley-Speak" sometime. Not the wording you
would expect from an engineer.

There's a new one. In this months QST, (IIRC) there is a picture of a young lady holding something in her hand. The story goes on about how immediately after passing her test, she pulled one of her baby teeth out.

Cute? I guess so. What's the point? I think that this kind of stuff is a concession to the people who think and proclaim that "We *have* to get the *children* involved in amateur radio!"

I think this eventually does a disservice to the ARS. Is there some sort of contest to see who produces the youngest Ham?

And you point out how difficult it would be for a first grader to read and comprehend the written tests. True enough

Heres a sample question from the Technician pool, pulled up on one of the radio test web pages:

In the far field, as the distance from the source increases, how does power density vary?
A. The power density is proportional to the square of the distance

B. The power density is proportional to the square root of the distance
C. The power density is proportional to the inverse square of the distance
D. The power density is proportional to the inverse cube of the distance

Not even taking into account comprehension of the question and possible answers, (I want to hear a 6YO person explain proportional and square root and inverse and cube) what person in that age group could read those words at all?

There may not be prompting, but I would be very surprised if there wasn't.

The reality, however, is that many Novices are renewing. Maybe they are
active, maybe not,
but the stats do show considerable renewal rates.

You raise a valid point. Today's "easy DX" makes HF an entirely different animal to beginning hams than it was not that many years ago. Satellites and the space program, instant
common worldwide communications via both telephone circuits and the Internet naturally make
it so. To lots of us it was an entirely different view when there was no such easy and commonplace, routine long distance comms.

Mike, it's much simpler than that. If one can recognize a sentence that happens to be the answer to a question that you can match up with it -all given in the question pool in advance- it doesn't matter a whit whether or not you can even pronounce the words, much less understand what they mean. I don't doubt at all the young lady passed the test fairly. Kids are really good at memory exercises such as that.

No doubt an adult was working with her and prompting her in the study sessions.

Which is why I say that Bruce's claim is not believable: Passed Extra
on a lark, without studying, without any lucky guessing, scored 100%,
in 8 minutes, reading every question, did the math in his head, and
took $250 from a couple of "CB-Plussers." Not hardly.

I don't know what level he reads at, but he writes at 3rd grade level,
except for the profanity and sex inuendo.

>the *children* involved in amateur radio!"

Not really. Children lose their baby teeth over a period of years. I know 9 year olds who still have some of their "baby" teeth. The girl in the picture could be 10, for all we know.

Some children are interested in radio at a very young age. I was interested in electricity and radio as far back as I can remember. Is that somehow wrong?

> I think this eventually does a disservice to the ARS. Is there some
>sort of contest to see who produces the youngest Ham?

Nope. Neither has there ever been an age limit. Nor has the licensing of young children EVER been shown to be a problem.
>
> And you point out how difficult it would be for a first grader to read
>and comprehend the written tests. True enough

There is NO, repeat NO, requirement that a person taking the test actually comprehend it. All they have to do is get enough right answers and they get a license. Been that way for at least 40 years (FCC went all-multiple-choice in the ham written exams about 1961).

It's true that most firstgraders/six-year-olds (the two are not synonymous) could not even read most of the written test. But there are obviously SOME six-year olds who can read enough of it to pass. And that's all that is required, according to the FCC.

>answers, (I want to hear a 6YO person explain proportional and square
>root and inverse and cube) what person in that age group could read
>those words at all?

Can you or anyone guarantee that NO six year old could read the above?

Even if you could, what if that question was not on that particular ham's test? Or if it was, the ham could have gotten it wrong and still passed on other questions, as K0HB points out.

Look at the question pool in its entirety, not just one sample. Also, even a pure random guess has a 25% chance of being right. All that's needed are enough right answers, and a license is granted by FCC. If there is something wrong with that system, it's FCC's fault, not the fault of those who pass the tests. None of it is not proof of any wrongdoing.
>
> There may not be prompting, but I would be very surprised if there
wasn't.

What proof do you or anyone else have of any wrongdoing?

To accuse a VEC of wrongdoing without any evidence other than "I don't believe it" is simply illogical. I have known children who learned to read before they were 4 years old. Did they fully comprehend what they read? Of course not! But they could read, nonetheless. And the developmental accomplishments in the 2 years between 4 and 6 are enormous.

I have seen children 3 years old walk up to a computer, turn it on, enter their password, put in a CD ROM, enter various commands and start playing a game - completely unassisted. Do they fully understand the process? Of course not! Can ALL 3 year olds learn to do the same thing? Of course not! But the ones I saw understand enough to get the result they want.

Perhaps some people (not you, Mike) are just jealous of others' accomplishments....

{Remainder deleted}

This newsgroup [alt.ham-radio.uwave] gets less than two dozen legitimate posts per year. The Spam sent to this group is far in excess of any real posts here. Therefore if you want accurate information, this message should be posted to other active Amateur newsgroups.

Besides, it appears that this study might be done for the benefit of your employer, Black and Veatch, Inc. It certainly reads much like someone wanting to usurp this ham band for commercial use. Low participation to this questionnaire, caused by posting to a seldom used Usenet group, is certainly not grounds to claim this Amateur Radio band is not used.
I have not seen this questionnaire on any of the Microwave mailing lists where the true microwave hams congregate.

Does the ARRL know about your survey?

>FCC
>> went in the opposite direction
>> 2) FCC thought that allowing more hams to use HF phone would promote
>> development and use of SSB
>
>Someone must have the original documentation that went with the
>FCC R&O that was issued by the FCC in late '52. What
>was written about the change in QST?

Not much, but it boils down to this:

1) There had been "incentive licensing" for 20 years prior to the "Great
Giveaway" of December 1952.
2) FCC had developed the 1951 restructuirng over a period of four years, but
then quickly abandoned it in 1952.
3) ARRL BoD opposed the December 1952 change, but was overruled by FCC.
4) FCC was convinced that hams would progress technically without license
incentives
5) FCC also opened 40 meters to 'phone at almost the exact same time, and
announced that when 15 was opened for ham use it would have a sizable 'phone
band

FCC's reasons included:
- Promoting SSB use by hams
- Facilitating use of 'phone in emergency, public service and CD work
- TVI reduction (almost all Generals and Conditionals on 'phone used 10 meters)
- Facilitating mobile HF work (hams were first allowed to use mobile below 25 MHz in 1949)
- No longer seeing a need to require a high level of technical knowledge to operate a phone transmitter

>> >> A ham in the '30s and '40s had to be "technical" even to get

>
>In the PC arena, the equipment also is almost obsolete the day
>it is sold as new because the next generation of PC boards is
>already in the production planning stages.

I would not say "obsolete" at all. In fact, the PC market works the other way - due to a high level of standardization and modularization, parts of computers are easily replaced without much technical knowledge. Heck, I've assembled complete PCs from a pile of parts with just a crewdriver. No soldering, no hardware adjustments other than a few dip switches and pin jumpers. Imagine if ham rigs were like that!

>> >> And what it really comes down to is this: If ham radio is
>> >> cconfined to those who have lots

>
>Yup! And the biggest issue of the two (cost and time) for
>me these days is time.

That's another difference between the 30s/40s and today. In the days of simple rigs built with a few large parts, a ham could build a station with a few hand tools in a short time. Changes and modifications were easily made. But as designs grew more complex and miniaturization became all the go, the time-to-assemble soared. And debugging became more time consuming as well. Kits helped out by doing all the metalwork (and PC work) for you.

Just think what would be needed to build that TS-690 equivalent. First you'd need a basic circuit design. Then precision metalwork, PC board layouts, and custom parts. Software would need to be developed, too. Once assembled, the unit would need to be tested and aligned. A lot of work to do in your basement in your spare time!

>Cheers and I hope everyone had a safe and wonderful
>Thanksgiving with family and/or friends.

Hope yours was great, too, Bill.

This statistic does not say anything about the motivation of those that got the
license.

However, you're right. Ham Radio currently IS boring. It is meaningless and
people get tired of it. The initial novelty of HF wears off.

>Or why stop there? Extra's just a few Question
>Pool memorizations away at this point. And most of the other 74,235 have just
>lost interest.
Exactly. It has nothing to do with technical skills or even interest. Its so
easy (for those that sacrificed their soul to Morse code), so why not?

> To me the license stats above, coupled by the attitudes and lack of
>motivation
>of some of the licensed posters here who have shown no interest in taking
>advantage of the easier upgrades, seem to pretty well confirm that
>supposition.
>Seems to them ham radio consists of posting drivel to rrap.

I have made my pitch at a few local clubs. The very small percentage that are
even open to these other possible activities never materialize (end up being
too busy, change their mind, or whatever).

I have made that sincere effort. Also, I was open to the possibilities. At
first, I thought it was just a bad club, so, foolishly, I tried another. Few
clubs and Hamfests later, I have begun to understand what "Ham" radio really
is. Ham Radio is being part of "something". Ham Radio is now an applicance
operator's club.

"TVI reduction"? Yeah, right. 15M being the standard IF freq of the TV
rcvrs of those days. Whatta disaster THAT was. Musta been one of
Brainiac's precursors who came up with that one.

>>Accusing the VECs of falsifying test results is pretty serious stuff, btw.
>Do
>>you have any solid evidence?
>
> VEC test sessions are NOT monitored by anyone else DURING
> testing.

Wrong.

Please list the VE sessions that you have atteneded/participated in from
which to make such a proclimation.

>Now go back to the famous/infamous ARRL news page that
> showed two darling six-year-olds who were reported to have
> "passed" written tests for Novice and Technician, respectively.
> Now let any, repeat ANY, first-grade teacher look at the
> written exam questions and decide for themselves whether
> SIX YEAR OLDS can read those questions well enough to
> answer even 70 percent of them. Just to READ them and
> be able to choose any answer.

No one said they had to UNDERSTAND the questions OR the answers, Len. The
FCC, in all it's wisdom, took that away when it "legalized" verbatim Q & A
manuals.

>If you say "yes they can, because...[for any reason]" then
> you MUST acknowledge that (1) You don't have slightest
> familiarity with six-year-olds' reading/writing comprehension;
> or (2) You think anything labeled/stamped/categorized as
> "ham radio material" is somehow "special" over and above
> any other subject matter; or (3) Any child who is "involved" in
> any way with amateur radio is somehow a "gifted child" or a
> "child prodigy." All of them are nonsense, ridiculous because
> of a way-too-strong identification (beyond rationality) with
> amateur radio.

As pointed out above, you have forgotten the other option...The child
memorized enough of the questions from rote memorization to be able to "answer"
the questions. This is NOT cheating under present FCC/VEC rules as long as the
applicant does not use said "study guide" during the test itself.

>ARRL was being over-indulgent in that bit of "news" fluff and
> the VEC group who did the alleged testing thought it all
> cutesy-poo from a kindly grandfatherly feeling to kiddies
> (picture included one of the VEC proctors, smiling and no
> doubt feeling "proud" over the kiddies' "accomplishments."

And WTF are YOU to determine that this might not be a career-inspiring moment for these kids? I'd rather see 10,000 under-12 licensees than ONE of them out playing with drugs, illegal guns or premarital sex.

>I accuse ARRL of very mild fraud on the part of condoning such
> such things and hypocrisy on the implication of passing a ham
> written exam as a sort of academic certificate

How dare you "accuse" anyone of ANY kind of "fraud" who took advantage of codified regulations to get what they want. These are the FCC's rules...NOT any the ARRL championed or sponsored.

>In the latter, if
> barely-able-to-read-and-write six-year-olds can read and mark
> with even reasonable comprehension, then the written exam is
> a SHAM...even under pre-restructuring standards

Notice that we are (sort of) agreeing, albeit for differing reasons, Len? Actually, the TEST itself (content, manner of administration) is quite appropriate...It's the open selling of "study guides" that give away the answers verbatim that is a "sham".

>No MORE evidence is needed...the evidence has already been
> presented although sugar-coated with parental pride and the
> usual propaganda of ARRL being all good things to US amateur
> radio and never making mistakes or illegalities

What mistakes? What "illegalities"...?!?! Please show where the ARRL (or anyone acting as thier agent, ie the VE's) conducted the test improperly. Were you there? Is there corroborating evidence that the kids used "crib sheets" DURING the test? You KNOW this for a FACT...???

>On the charge of deliberate FALSIFICATION for whatever reason,
> ARRL VEC is GUILTY.

What did they falsify? And in what what jurisdiction have you been appointed or elected to the bench from which to issue a "verdict" of "guilty" or "innocent"...?!?!

Notice that he's been unable/unwilling to post anything of any note since we learned his real identity?

What's with these people? Here's the greatest boon to "free speech" since the Bill of Rights was drafted, and they think the only way they can "honestly express" themselves is anonymously? How did American's "honestly express" themselves BEFORE the Internet?

The kid probably had some points to make, but he tried to out-talk his walk, and he stumbled. There's no dishonor is expressing an idea and being proven wrong...But there IS dishonor in making allegations and not having the "stuff" to back it up.

Vipul, you have much to learn. Please take the opportunity to do so.

Steve, K4YZ

>However, you're right. Ham Radio currently IS boring. It is meaningless and
>people get tired of it. The initial novelty of HF wears off.

If the licensee ONLY operates HF, and the licensee NEVER takes the time to explor all there is to explore in Amateur Radio, then indeed it may be "boring" to THAT person.

However you make a very inappropriate and unfounded allegation that, on the face of it, would make it appeara s if ALL Amateur Radio is "boring". THAT is UNTRUE.

Amateur Radio is anything BUT "meaningless".

>I have made that sincere effort. Also, I was open to the possibilities. At
>first, I thought it was just a bad club, so, foolishly, I tried another. Few
>clubs and Hamfests later, I have begun to understand what "Ham" radio really

>operator's club.

So...In only ONE year of licensure as an Amateur Radio operator, you have sufficient "evidence" to make such a damning claim? Since the folks at these clubs do not like what YOU like, ALL Amateur Radio is "boring"...?"!?!

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA! ! ! ! !

VIPUL! Believe it or not, Amateur Radio has not marked time for 80+ years waiting for YOU to come around and make your judgements of it!

If someone obtains an Amateur Radio license and then only pursuses ONE aspect of its many options, that's THEIR loss!

And if YOU continue to mope around with your head between your legs because these "clubs" are not embracing YOUR "wisdom" over what should and should ot be fun, then OH WELL! ! ! !

Even in the age of Internet and "Game Boys", I find Amatuer Radio to be anything BUT "boring". But that's because I don't sit around waiting for someone to come to me with things to do! I get out and do them!

"Ham Radio" is what the individual licensee makes of it! Now...STOP that childish moping and MOVE ON!

The point isn't his spelling. The point is he tells everyone that
they're stupid. With 3rd grade prose.

>> - TVI reduction (almost all Generals and Conditionals on 'phone used 10
>meters)
>
>"TVI reduction"? Yeah, right.

That was one of the reasons.

Back in those days, non-Class A hams congregated on 10 meters to use 'phone because 160 was all chewed up with LORAN and power restrictions. Plus mobile on 10 was very popular.

This was in the days of plate modulated AM rigs running Class C. Any second harmonic at all would mess up Channel 2 bigtime. Third harmonic would take out Channel 6.

btw, the late Phil Rand, W1DBM, demonstrated that a Class C AM rig could be cleaned up to the point of "no TVI". He dramatized this by setting up a 100-watt class 10 meter AM rig and a TV set connected to the SAME ANTENNA, through appropriate filters. Clean picture on the TV while Phil chatted on 10. Convincing, huh?

>15M being the standard IF freq of the TV
>rcvrs of those days. Whatta disaster THAT was. Musta been one of
>Brainiac's precursors who came up with that one.

Was so bad that some mfrs. sold kits to move the IF to 41 MHz.

But 15 meters was not authorized to US hams for another year.

Idiots. That's what got my back up, din do anything to "endear" the
NCI position on code tests to me . . real political geniuses . .

> Guess who was a major player in the '99 changes? ARRL. FCC got maybe
> two dozen comments.

Offhand I'll guess the League didn't "dipstick" the level of interest
in ham SS right, they still have a 1991 $20 tome on the subject on
their store bookshelves. Must be getting a bit dusty by now. Unless
they're selling copies to Ma Bell engineers.

> You watch, somebody like G3PLX will come up with a freeware soundcard
> implementation of digivoice that sounds good and works well in
> SSB-or-less bandwidth.

That would be supported. But as was the case when ssb replaced AM on the HF bands the stuff would have to have some very noteworthy advantage over ssb to become widely used. PSK31 works very well and has been around for over a decade, but it's still a novelty mode and hasn't "replaced" anything. Maybe it's nibbling at RTTY but I dunno.

> > investment & coordination ain't gonna happen either. On a strictly
> > point-to-point basis SS would work but so do 2m FM simplex for voice
> > and the Internet for binaries.
>
> Bottom line: It needs doers, not talkers.

Right - and that's the only real problem SS has with getting on the ham bands at least for development and "market research" purposes. I wouldn't have a problem in the world with the FCC if they set aside maybe 100Khz of one of the high UHF bands for SS. *IF* some credible group got really serious about it. The TAPR SS project got underway in '91, nothing done since '97 or so. Thud.

>
> > > All that's left is process gain.
> >
> > Ya mean like cw & PSK31?
>
> I mean like Shannon & Poisson.

The Poisson Pit of huge numbers . . ping, ping my NB often & loudly. Screw that . . "Poisson" has a whole different connotation in the mech eng biz.

> I think one reason ATV and SSTV remain niche modes is the difficulty
> of coming up with large amounts of visual stuff to send.

I think the minimal number of ATV comms is another example of trying to duplicate what works in commerce not grabbing much attention in hamdom.

How 'bout RRAP on live TV instead of 7.037? "OK, now cut to The Putz for his latest piece of bufoonery . . "

> That's you. I like a good CW ragchew with an op that knows how ta make

> If it's so bad, what are you doing to fix it?

In thinking about it over a pretty long period of time including lots of VE time, the conclusion I've reached goes something like this...

What the easy tests have done is to have brought into ham radio a LOT of people who wouldn't have came under any circumstances if not for the VE system and the prepublished question pools. That is a good thing, but has a few peripheral effects which can and maybe must be considered to be negatives. One of those effects is that there can therefore exist a pool of licensed hams who really don't care much about ham radio nor about much of anything that is actually a part of it. It was all a near-freebie, to they took it just to be getting something that many consider of value for near-nothing.

Many seem to not realize that fact until they had obtained one of the easy licenses -some still don't- and now some don't really feel like abandoning it in total, so what do they do? POST DRIVEL TO RRAP! It's the sum total of their amateur radio activity.

Some of this very same category of persons never even bothered to obtain a license but hang out on ham radio newsgroups and post anyway. You find them to be soulmates with those of the same group who did initially get a license but seem to have never "got around" to doing anything constructive with it, or anything at all.

Some only wanted it for the notoriety of a vanity callsign, such as W5SEX or sum such.

Bottom line, the VE system and the question pools are probably a (GASP!) "good thing" in Martha Stewart vernacular, in that it does offer a route into the hobby that makes it much less of an ordeal to accomplish, thus more attractive to a busy generation of young and older adults, not to mention kids who have loaded schedules that would have been unthinkable in earlier generations.

The negative effects of the offshoots and the chaff which falls along the way is mostly observable on rrap and a few other such limplimbed newsgroups. You don't see a lot of it on the air, save a few outlaw groups on their chosen turf. You don't see *any* of it on the CW/data portions of the bands.

Sort of another version of those who "will", do. For those who "won't", it really doesn't effectively matter. They just fall by the wayside and are covered up by the sands of time and their own fallout.

I was waiting for someone to bring that up. True enough, the kid could possibly get that one wrong and still pass. But there are enough questions along those lines that the kids could get lots of them wrong - to the point of not passing the test.

My point is that the kids probably aren't comprehending the test, so something else is likely helping them get the ticket. Although for the general and Extra, I contend that it would be harder to memorize the tests than to just learn them, it is probably possible to memorize the Technician tests.

And before anyone points out the exceptions of genius, I am referring to normal kids.

Agreed. I didn't time myself on the Extra test, but I think that it
would be difficult to get it finished in 8 minutes if I had the answers
in front of me.

And forget memorization. Two things work against that. The numbers of
questions in the question pool and that the multiple guess answers are
mixed up, that is not in the same order as in the pool.

> the Ph.D. candidate to do original research work in their field.

True enough, but I wouldn't blow that too far out of proportion. The "original research", in Mathematics at least, is publishable but not earth-shaking. What typically happens is that the advisor picks a problem which he could solve without too much difficulty himself, and which would count as a minor publication on his resume, and assigns it to his student. Original, yes, but not exactly a quest for Atlantis.

> My point about the Ham exams, they way they are now, it is entirely
> possible for one to pass all of them up to Extra, and not understand
> even basic ohm's law...

I'm not sure what you mean by "understand" here. It is certainly necessary to *apply* Ohm's law in the exam. Are you saying that we should require hams to justify Ohm's law mathematically? Or to understand differential equations sufficiently to analyze RLC circuits? Or to produce original research in the area of circuit design?

While that sounds exciting, it would seem rather extreme to me.

> So if WA8ULX says they, university grads, haven't proved anything,
> well I think they have...

A bit, but I'd be leery of going to an extreme with this. Grads are not superior beings; most basically are survivors of an endurance contest. Even a well-earned degree was 95% survival.

> The integrity of the testing process is far higher for a university degree
> that for the current crop of Ham Radio exams.

That's debatable, but you could certainly have a point. As far as regs go, the "hiliter method" seems adequate; they're just memorization

anyway. Theory, on the other hand, is easily faked by memorizing the particular answers.

> I would have more confidence that an university EE grad knows
> basic electronics than I would a Ham of any license class without an
> EE degree.

Well that certainly goes without saying! But if you raise the bar so high that only a EE grad can clear it, then the set of hams will be a strict subset of the set of EE grads. Is that the goal? If not, it would seem that another approach is required.

> There is nothing funnier than a Ham who can pound out 45 wpm, but yet can't
> figure out how to wire up his key to his rig. ;-)

It's a funny picture, true! :-)

But it is probably not reality. I'd suspect that the obsession that leads to 45wpm proficiencies is normally found together with an interest in radio history including xtal, QRP and homebrew. So if I met a man who could send 45wpm, I'd expect he probably built his rig himself and powered it off a lemon. At least, that's more likely than the situation described above.

There's no doubt that there are a lot of people upset with the current testing scheme. It's so pathically easy, that I remember a story in QST, prior to VE testing, in which a 12-year-old walked into an FCC field office with no license, and walked out an Extra. There is, however, one thing that everyone is overlooking, and that is the fact that a license is only an entry level test. It, by no means, indicates that one is an expert in the field of radio electronics. Sure, the license will get you on the air, but the learning should, I would hope, continue even after the testing is done. This applies not only to amateur radio, but to any field of study.

In a sense, this is how I became discouraged with amateur radio. It seemed that the hams I met were only concerned with working DX or the next contest that came around. They assumed, incorrectly, that I wanted the same thing. I asked about various antennas or transceivers, and the response would be, "That antenna won't do you no good in a contest." (Personally, I'm bored after ten minutes of working any contest.) Working DX today is a joke with the DX packet clusters. If your station set-up is good enough, it's like shooting fish in a barrel. The bottom line is that no ham I met wanted to grow beyond their own egos.

I should point out that my original interest in amateur radio was far from technical. I am not a technically-inclined person. I was drawn to it because I thought the ability to talk around the world and learn about different people

from different cultures was exciting, and amateur radio looked like a great way to do this. This notion was quickly put out of my head the first time I worked DX station - you don't chitchat. You exchange callsign and signal report, let the next guy work the station. I felt this to be boring and impersonal.

Heavens no! I was ripping things apart and getting in trouble for it at
a very early age. Fortunately my Grandfather, who worked at Bendix, was
wise enough to get me a power supply and send a steady stream of old car
radios that couldn't pass QC to keep me (mostly) occupied.

I'm not against kids having licenses. But I don't support them having
licenses if they don't comprehend what they should know.

Well, there should be enough comprehension for at least basic safety.
What a great thing it would be (not) if the 6yo kid passes the test
while not comprehending anything about rf safety. There are plenty of
ways then to get in trouble.

Most adults can figure out at least that there can be some danger
from even a HT, if only from the rf safety questions.

True, there are some. I wonder how precocious these kids are? But I'm
referring to normal kids, not genii.

None at all, just conjecture. Also being around kids for the past 18
years makes me skeptical.

> To accuse a VEC of wrongdoing without any evidence other than "I don't believe

> were 4 years old. Did they fully comprehend what they read? Of course not! But
> they could read, nonetheless. And the developmental accomplishments in the 2
> years between 4 and 6 are enormous.

No accusations here, Jim. I'm not even sure that the VE or parent "prompting" the child is a violation of anything. After all, the VE's are required to take applicant's handicaps into account, and there may be a determination of the persons age/reading comprehension ability as a "handicap". But if kids are passing without actually knowing anything, then it is just *WRONG*. If my son had wanted to take the Tech test, as a youg child, I would make darn sure that he knew the material.

Mike: memorization is how I passed the tests. Cross out, leave out,
whatever, all wrong answers. Read the questions with the correct answers.
Do that for several weeks and a test can be passed. Some of the material is
retained, sure, but not a lot of it.

HOWEVER...I am not sure a kid could do it. Don't know.

Whoops...I also forgot to mention that even though someone can memorize the
question/answer pool, it doesn't mean they will be a bad amateur. Bad
person=bad amateur. Good testing doesn't mean it will make a good amateur.

Then, as more-experienced and more-knowledgeable amateurs helping the less-experienced and less-knowledgeable, we can provide that advice.

Which I did back on June 27, in the thread "Sixty Meter Band Planning". Gave links to two antenna articles tailored to the conditions described. Both articles described simple, inexpensive, easily-built antennas.

Has that "advice" been acted on in the intervening 5 months? I don't think so. Certainly not for lack of time, as evidenced by the huge number of posts here written by the person requesting the "advice".

Message-ID: <c2356669.0212030936.231c0805@posting.google.com>
Source record: 57083

It was 90 years ago this month, (December, 1912) that the Radio Act of 1912
came into effect, regulating US domestic radio. This was the beginning of government licensing of all radio transmitters in the USA.

The original proposal was to license both receivers and transmitters. This was opposed by one man - Charlews H. Stewart, pioneer amateur and communications lawyer, representative of the Wireless Association of Pennsylvania, VP of ARRL until his death in 1936, later licensed as 3ZS. ARRL would not even exist for two more years.

Stewart argued before Congress that receivers should not be licensed. He used
both legal terms regarding interstate commerce and the ownership of land, as
well as simple, clear verbal arguments: "The waves come upon our aerials, whether we seek them or not". When the final form of the Act was ratified, there was no mention of licensing receivers. All because of one amateur.

3ZS was a local. His house still stands here in Radnor Township. He was a
township supervisor for many years.

Imagine what US radio would have been like over the past 90 years if all
receivers were licensed.

For more details, see QST for December, 1952, and April, 1936.

You are a Tech Plus, IIRC. I noted in one of these posts that I thought a person could possibly memorize that test. As for higher level tests, perhaps I shouldn't say forget about it. A person *could* concievably memorize the entire question pool. But it would just be easier to simply *learn* the material. And then they have shortchanged themselves.

And even for the tech test, if you took several weeks to memorize the answers, you took a couple weeks more than just learning the material.

Thanks, Larry.

Educated? That just means I went to school and got some degrees.

Intelligent is in the mind of the beholder.

I don;t know if those things make me qualified to make a judgement or
not. Obviously Hans sees himself as qualified to make similar
judgements. Which is exactly his point, of course.

> What I find anal-retentive/condescending is your
> criticism of someone who is trying to uphold the accepted language

Perhaps the more important point is this: The person who doesn't think
that spelling, grammar, punctuation and capitalization are important
actually weakens his own arguments in the minds of many who read them.
Sure, we humans make a lot of noise about being purely rational, but
in real life, appearances count for a lot. Ask anyone who does job
interviews.

Foma (def): "Lies" ; "harmless untruths"; "a useful and harmless sort of horseshit".
- Bokonon

73, de Hans, K0HB

"In the beginning, God created the earth, and he looked upon it in His cosmic loneliness.

And God said, "Let Us make living creatures out of mud, so the mud can see what We have done." And God created every living creature that now moveth, and one was man. Mud as man alone could speak. God leaned close as mud as man sat up, looked around, and spoke. Man blinked. "What is the purpose of all this?" he asked politely.

"Everything must have a purpose?" asked God.

"Certainly," said man.

"Then I leave it to you to think of one for all this," said God.

And He went away."

That would be so if there were only one test! Obviously that isn't exactly what the FCC had in mind, is it? Why do they go to so much trouble to see to it that there are categories of licenses where people actually progress in knowledge and experience if "the license is only an entry level test"? Clearly this is not so. Each license is the entry to that level.

>
> It, by no means, indicates that one is an expert in the field of radio
> electronics. Sure, the license will get you on the air, but the learning
> should, I would hope, continue even after the testing is done.

Obviously, since on a practical level the tests can do little more than assure that you try to learn something about the next level. That's why the simplified and reduced tests only move the hobby toward a lower level of knowledge and experience. Tests can only assure so much, and the less the test amounts to, the less it means.

I have no idea what license you hold, and care less, but your comments here reflect a definite lack of experience in HF ham radio, as we shall comment on below. That is not a bad thing, but you clearly have missed a lot that you would seem to have benefited from is your knowledge and experience had been broader. Read on.

> This applies not
> only to amateur radio, but to any field of study.

Obviously. Beginning automobile drivers don't hop into over the road trucks and take off, they barely can keep a four wheeler between the fence posts far too often.

If a student pilot gets signed off on a Cessna 150 he would be a fool to blithely assume he was automatically capable of handling even a light twin, let along a jet.

Everyone begins somewhere. But the idea of a single license does all is foolish, even for ham radio. FCC has known this all along, but today seems bent on moving in that direction for a variety of reasons, few of which have to do with the long-term good health of the ARS. FCC these days is driven by the almighty dollar.

> minutes of working any contest.)

Well, so so you landed in a nest of hard-core DXers, and you weren't one. So the thing to do might have been depart for more friendly turf. Some clubs are dedicated almost solely to working as many DX contests as hard as can be done, and little else. Personally I'm more in sympathy with you- I like to ragchew a little DX just for the fun of it, and have done considerable amount of just that. Yep, it's frustrating to hook up with a DX station who himself would like to ragchew only to have the DXCC driven horde descend on you and annoy (to put it mildly) with blanketing calls to him such that it's impossible to carry on. Surely you wouldn't let that be the end of your ham radio hobby, and just assume nothing more was available. In time you learn that a "dead band" holds more promise for just the type of QSO you're looking for. Often a band that seems more dead than alive will in fact be open but lightly occupied, and the DXCC crowd hasn't yet noticed. That's the time you find your niche. But you gotta "be there" looking, tuning around, evaluting, and checking the weak signals, even calling a short CQ sometimes brings 'em out. Throwing up your hands in disgust won't do it.

Actually it's a shame you don't like CW, for there is where the real ragchews take place, both with DX stations and the more interesting individuals on ham radio. You'd be really surprised who you can run into, and complete a really satisfying chat. And I don't mean hi and 'bye. But it does take a bit of effort and time spent in getting yourself capable.

> Working DX today is a joke with the DX packet
> clusters. If your station set-up is good enough, it's like shooting fish in a
> barrel.

Not for me. I've never used a packet DX cluster and probably never will. Even at that, for those who don't have the time to spend scanning the bands long-term for openings and to see who shows up, why not use the cluster? All that really changes is the way they operate. The propagation remains the same, the distance the RF travels, etc etc. The cluster is just one more high tech tool, not available until a few years ago. I thought you wanted hams to progress. That's progress.

> The bottom line is that no ham I met wanted to grow beyond their own
> egos.

Sure looks like you need to broaden your sphere of contacts. Most of the hams I ever met in person were pretty nice people, with many interests that either match mine or that I find very fascinating to even hear them talk of on some area where I have little or no knowledge or experience. In ham radio there are all sorts of people with all sorts of interests, experience, high levels of expertise and qualifications. For me, that's a big part of what makes ham radio stay interesting after so long a time. I learn more on the rec.radio.amateur.antenna newsgroup these days with far less time invested than I ever did before. There they can cut right to the heart of any subject without a lot of repetitious chaff, and frequently do. But newcomers with basic questions aren't shoved aside, either. And make no mistake, those folks hanging out there are all hams, even though some have gone far technical pursuits.
No doubt they all have egos. Sometimes they stick out like a sore thumb, but

there's usually some other heavyweight just as willing to bring the miscreant back to earth. All in all, an enjoyable place for some of us to hang out and just read, if nothing more. But if one has no interest in any of the technical aspects of ham radio, it's unlikely you'll ever discover such a spot.

> I should point out that my original interest in amateur radio was far from
> technical. I am not a technically-inclined person. I was drawn to it because I

> to do this. This notion was quickly put out of my head the first time I worked
> DX station - you don't chitchat. You exchange callsign and signal report, let
> the next guy work the station.

Sometimes, and sometimes not. It doesn't have to always be that
way.Unfortunately when on the HF voice modes it often is. But one of my more
memorable SSB DX contacts was several years ago when I happened to tune across what
seemed like a fast dying 20 meter band and heard a couple of ZL's (New Zealanders)
talking local. Like me, they had thought the band to be dead for long distance
propagation, but we chatted for an hour, the three of us, about all sorts of things
including details about the regions where we lived and our work, really had
a fine visit. I agree it's a shame one can't do more of that in the DXCC atmosphere
that permeates HF SSB, but the alternative is work smarter and check the digital
modes, to include CW. If you don't you'll never learn to appreciate a weak CQ from
the other side of the world that on a near-dead band that surprises you is there.
And
try out PSK31 or RTTY or some other digital mode. Let your horizons be expanded.
You'll get far more enjoyment out of ham radio if you do.
Anyone with only a one dimensional expectation of ham radio is sure to wind up
disappointed. There is really a lot more to it than readily seems to be the case.

I hope he is not thinking I don't have that antenna for 160. Tell you what 'Brian'. Go do a Google lookup for last years 160 contests and see if Im not in it. Or just wait till this weekend when I post another winning or at least close to winning score on the 160 meter contest. That will be in CW of course.

Why not be honest and state that you, personally find amateur radio
boring and meaningless and that you are tired of it--that the novelty of
HF has worn off for you?

> I have made my pitch at a few local clubs. The very small percentage that are
> even open to these other possible activities never materialize (end up being
> too busy, change their mind, or whatever).

Maybe amateurs in those clubs finds your approach boring or finds your
litany of complaints boring. Maybe those folks are busy enjoying
amateur radio.

> I have made that sincere effort. Also, I was open to the possibilities. At
> first, I thought it was just a bad club, so, foolishly, I tried another. Few
> clubs and Hamfests later, I have begun to understand what "Ham" radio really

> operator's club.

No, I don't think you yet understand it. Amateur radio is partly about
being part of something. There are plenty of those who use commercial
equipment. I don't know many who haven't built at least some item they
use. I know a number who have built equipment from kits. There are
numerous fellows using homebrew amplifiers as well. You saw yourself as
open to "the possibilities" (whatever those might be). If you went to a
number of clubs and hamfests and could arouse no interest there are a
couple of additional possibilities: 1) That your manner of presentation
left something to be desired and 2) the product you are attempting to
"sell" has no market.

Maybe you only thought that amateur radio is for you. Maybe you really
want to design O'scopes for fun.

>
> Cute? I guess so. What's the point? I think that this kind of stuff is

>a concession to the people who think and proclaim that "We *have* to get
>the *children* involved in amateur radio!"

The "point" seems to be that hypocrisy exists in varied states
of mind about amateur radio.

Those who proclaim (and proselyze) "must get children
involved in amateur radio" usually admit to having gotten
into the hobby as teen-agers. None of them have admitted
to getting into it as 6- to 9-year-olds with perfect understanding
of radio, English-as-a-language enough to understand all the
CW abbreviations comprehensibly, and the ability to co-exist
with mainly adults in a crowded spectrum.

Now the above is in direct conflict with the braggarts who
loudly proclaim their status and rank as "extras" and all the

"work" involved in achieving that high pinnacle of "success."
Or, if not in direct conflict, then it only proves a childishness
akin to the immature nyah-nyah of "I'm better than you are,
because!..." :-)

I fail to see where any "must" has to exist. Amateur radio is
basically a hobby, an avocation involving radio activity, despite
all the self-described patriotic bwahaha about being some kind
of "service to the nation." The government recognizes that
citizens have hobbies, enjoy them, but must regulate those
that share the EM spectrum with others.

Case in point: Part 95 radio-control of model aircraft and model
vehicles. The FCC allocated a whole new band of frequencies
(72 MHz) just for telecommand of such things. It is no "service
to the nation" as important for security of the citizens, just
a service for some hobbyists who enjoy their activity, an activity
not essential to aeronautics or any other science involved. By
membership numbers of the Academy of Model Aeronautics,
there are about 170 thousand member-model-flyers, oddly
coincident with the membership numbers of the ARRL. :-)

Radio amateurs are granted a permission to operate a trans-
mitter as part of their passing a federally-regulated (but private-
party proctored) test for a license. They receive a federal radio
callsign as part of that grant...and immediately use that federal
merit badge identity to attach it to their legal name as if it is
some noble Title or Academic Achievement Certificate! :-)
["...it is what we are!" - Jim Kelley, in here]

Model aircraft flyers don't received such a Title and rarely
append their AMA number to their name...or loudly proclaim
their activity as "authorized by the Federal Communications
Commission!" They just enjoy their activity, have fun, and
some engage in competition with other model flyers in several
different contests...on out to international competition events.

Most radio amateurs scoff at model flyers' activities, trying to
emphasize that they are "more adult" than those "playing with
toys." Then the largest amateur radio organization makes news
items of 6- and 9-year-olds "passing" written tests...as if those
children were somehow on an adult level along with the fifty-
something ("authorized by the FCC") extra-class long-timers.

> I think this eventually does a disservice to the ARS. Is there some
>sort of contest to see who produces the youngest Ham?

I don't think so. I see it only from the paternalistic interest of
those fifty-something now-grandpas who've simply lost their
self-perspective of amateur radio in their paternal zeal/pride.

Supposedly, ARRL news and other, lesser amateur news "gets
out to the public" (it doesn't, but never mind that). If so, then it

is in contradiction to the stressed "importance to the nation" of
amateur radio as some kind of "national service (and need)."

>
> Not even taking into account comprehension of the question and possible

>answers, (I want to hear a 6YO person explain proportional and square
>root and inverse and cube) what person in that age group could read
>those words at all?

That challenge might be irrelevant to BEING A HAM! :-)

Under the present amateur radio regulations, the FCC makes NO
distinction on age of a licensee. Legally, ANY licensee can
operate an amateur radio transmitter entirely by themselves and
there is NO requirement for any older licensee to be present
(except in cases of allocations where there are regulations on
classes on certain frequencies). This means that, legally, a 6-
year-old or a 9-year-old or any other child licensed can transmit
worldwide on HF bands...AND be totally responsible for technical
regulations regarding that transmitter as much as any adult.

ALL of the written test elements originate with the VEC Question
Pool Committee. The content is merely approved by the FCC.
VECs are essentially private-party test proctors having no direct
standing as officials of the FCC...they are licensed radio amateurs
who volunteer their services of their own accord. Everyone has to
take their actions on faith under the regulations of all radio operator
license testing done by private organizations. However, that is no
guarantee that VECs are always honest.

>There may not be prompting, but I would be very surprised if there wasn't.

Legally that is NOT permissible according to the regulations.

However, in the case of ARRL VECs, their actions are taken as
somehow "more honest" than all other VECs, therefore they are
sacrosanct and immune from any charges. :-)

February 1953: No satellites, no troposcatter systems, and only a
partial worldwide telephone-teleprinter long-distance communications
system. No personal computers, hardly any transistors useable on
HF, no integrated circuits yet, frequency synthesizers were still
being developed in electronic laboratories.

Yet, the US military, a few other militaries and some commercial
communications service companies had already established a
worldwide 24/7 communications on HF. Except for a rare solar
storm, such worldwide communications was COMMONPLACE
and ROUTINE. On HF. Known.

Where was dickiebird in that month? Not drafted yet, perhaps
worried about being taken in while still a civilian? Did he already
know everything about radio and had the stupefying skill level in
morse code? Did he ever work in any REAL military radio after
being drafted? Did he ever learn the distinction between manual
telegraphy and teleprinter telegraphy? Did he have the knowledge
of Shannon's Laws formulated six years before (he didn't know of
them 40+ years later)?

>>
>> DSP (Digital Signal Processing) uses "40 bits?!?" I don't
>> think so, ace.
>
>Catch up with the JRC NRD-545 swl rcvr IF DSP Putz. I have one of those.

Kellie, you are one IGNORANT bullshit artist.

The third IF (20.22 KHz) is the level at which the 18-bit A-to-D converter works. EIGHTEEN BITS, not "40."

The internal processor is a 40-bit FP microprocessor, not at all unusual...modern PCs have that (32 to 64 bits), have had it for some time (at least 11 years).

In order to do DSP on an IF, the A/D converts the 20 KHz analog signal into an 18-bit equivalent digital one. That's the baseline for determining resolution and REAL "bit length" of DSP. The processor works only on the digital version of the signal. Depending on the type of DSP the processor can use either all-integer or mixed integer and floating-point calculation. If FP, the numeric word length (in bits) is larger than integer in order to handle the exponent of the FP value. While that calculation must be very rapid due to over-sampling (estimated at 3 X the 3rd IF), that is relatively easy to do with modern CPUs.

The result of processing is a 16-bit digital word length in the NRD-545's design. The OVERALL DSP bit length is determined by the shortest bit length, NOT the processor capability. That is SIXTEEN BITS in the D/A, not "40."

But, all you did was read the advertising blurb, saw "40 bits" and wanted to hit the newsgroup to "get back." :-) After all, you bought one of those "rice-boxes" at near $2K and had your "investment" and "honor" to protect!

You don't know even the basics of DSP yet you sling around the brown stuff to bluff others. Tsk, tsk, tsk. You don't learn...

Bruce, all I can say at this point is that I need to find an exam session and take the Extra written exam again. But I guess I don't need to say "Extra written exam" because there isn't any other kind anymore (i.e., no Morse exam to accompany the written). So I'll just take the "Extra exam," which is how you got your Extra - on the coattails of No Code, International. You should send Carl part of that fictitious $250 in gratitude.

When I pass the Extra exam, I won't be on RRAP telling unbelievable stories about how I did it:

1. on a Lark,
2. without Studying,
3. without any Lucky Guessing,
4. without Error,
5. in 8 minutes,
6. and collecting a $250 Bet from two unnamed CB-Plussers.
7. Then telling everyone else how stoopid they are.

Dixie, are you telling me that this practical, efficient, easily
implemented, and universal mode isn't available to you away from home?

That you would have to cobble together a computer, a modem, and a
telephone connection, then write a Morse software program in order to
"get out?"

We need to rethink this whole Morse Code thingy and put more computer
hardware, software, and digital theory in the exams.

Looks can be deceiving, particularly when judged from a still picture.

Way back in the late 1940s, a local 9 year old went to the FCC office
and passed the Class B license on the first go. This was in the days
of 13 wpm send-and-receive tests, essay questions, draw-a-diagram,
etc., all in front of the FCC examiner. And years before the Novice.
This kid had been copying Morse since the age of 6. Still a ham today,
btw.

A lot of us tried to tell that to the FCC. They did not act on our
suggestions.

> What a great thing it would be (not) if the 6yo kid passes the test
> while not comprehending anything about rf safety.

Same is true of adults. There are only a few safety questions on any
given written test. It's possible to go from zero to Extra and have
gotten all the safety questions wrong. Been that way since long before
restructuring.

> There are plenty of
> ways then to get in trouble.
>
> *Most* adults can figure out at least that there can be some danger
> from even a HT, if only from the rf safety questions.

The test alone is no guarantee. In fact, I would say that an adult is
far more dangerous from an RF safety standpoint. A young child is not
going to have the resources to assemble a high power station unaided,
but there's nothing to stop an adult with deep pockets but no real
understanding of RF safety from putting high power into a poorly sited
antenna. Look at the descriptions of high powered cb mobiles. They
aren't built by kids.

> > It's true that most firstgraders/six-year-olds (the two are not synonymous)

> True, there are some. I wonder how precocious these kids are?

They are probably way ahead on the developmental scales. Part nature,
part nurture.

> But I'm
> referring to normal kids, not genii.

Genius is normal. It's just not average.

The main point is this: While MOST 6yos couldn't pass the test, that
is NO proof that a few gifted children could not. It is also NO PROOF
WHATSOEVER of wrongdoing by VEs.

> years makes me skeptical.

I've been around kids for the past 48 years. Gifted ones can do
amazing things. And there are all kinds of gifted kids.

I am convinced that there exist children who could pass the tests as
claimed. No evidence of wrongdoing or "fraud" has been provided.

>
> > To accuse a VEC of wrongdoing without any evidence other than "I don't believe

> > they could read, nonetheless. And the developmental accomplishments in the 2
> > years between 4 and 6 are enormous.
>
> No accusations here, Jim.

There have been accusations of fraud and other worngdoing in this
thread and elsewhere, by someone who was not at the VE sessions in
question and has no evidence at all. Basic attention-seeking behavior
that most six-year-olds find immature. To give those unfounded
accusations, or the accuser, any credence whatsoever is illogical.

> I'm not even sure that the VE or parent
> "prompting" the child is a violation of anything. After all, the VE's

> are required to take applicant's handicaps into account, and there may
> be a determination of the persons age/reading comprehension ability as a
> "handicap".

I don't think the VEs would do such a thing. I don;t know any VEs who would. If anything, they'd be extra-careful, because of the possible publicity.

> But if kids are passing without actually knowing anything,
> then it is just *WRONG*.

What about adults? Kim readily admits she passed by memorizing. Worked for her.

> If my son had wanted to take the Tech test, as
> a youg child, I would make darn sure that he knew the material.

But isn't it a double standard to hold a child to a different level of performance than an adult, based solely on age?

--

And if you still think memorization won't let a kid pass the test, just talk with a kid who's fascinated by Pokemon, or Harry Potter, and see what kind of memorized detail info they can spout on demand. Why should the ham tests be any different? Take the above question - all anyone needs to do is word-associate "power density", "far field" and "inverse square" and they have it licked. Do they really need to understand Poynting vectors or do exact calculations? Nope.

Funny thing is, most of the newbies I encounter really want to learn the material. Sometime back, there was a guy on one of the other NGs or reflectors I read asking about some questions on the Extra test. They are simple Thevenin equivalent circuits (though the test doesn't call them that). The newbie was having trouble understanding how to solve the problems, so I helped him out. The important thing was that he knew there were only ten of them in the Q&A pool, and that he could easily memorize the answers. That wasn't good enough for him - he wanted to understand the material.

>Does the ARRL know about your survey?

At the ARRL, W1RFI is the interference expert. I have personally reported to him the interference I have seen up there by 2.4GHz cordless phones. Believe it or not, not all of those are SS - some are actually WBFM where the bandwidth is a full MHz (or up to 1.5MHz); enough that my narrow band Kenwood TM-2400 (for those who don't know it, it's a Japanese model of the TM-742 that comes with a 1W 2.4GHz double-thick module, and does 2400-2450) sees a carrier over that entire range. Some of the FHSS cordless phones put enough RF energy into it that even with the NBFM radio, one can make out what is being said!

I have yet to detect any interference to my TM-2400 (or false carriers, etc.) due to either my microwave oven or my 802.11b WLAN equipment.

You should also ask the guys who run the W6ATN web site about any interference they may see to their ATV repeater operations.

One other thing, Vipul...You have been told before about getting your
attributions correct. Jim Miccolis, N2EY, >>NEVER<< called you a "creep" or a
"putz". I did. And part of the reason I did was your frequent erroneous,
ill-concieved allegations, just like THIS one.
You owe Jim Miccolis an apology.
Steve, K4YZ

I am sorry, Jim Miccolis,N2EY. I thought you called me creep and putz, when
actually K4YZ did. By the way, neither putz, nor creep are in the dictionary.

In a message dated 12/3/2002 4:53:19 AM Eastern Standard Time, k4yz@aol.com
writes:
> Amateur Radio is anything BUT "meaningless".

Quote from long time Ham:
"I have lost interest in ham radio - it has lost it's magic. At first I was
disturbed by this, questioned it and even tried to make myself interested
again. As time went on I realized I have perhaps matured as a person and I had
broken free from those childhood (childish?) feelings and motivations.

I now realize I spent several years engaged in an activity with very little
tangible return - thousands of dollars and just as many hours in a MEANINGLESS
pursuit -a grown man playing with substitute toys as it were. If I had realized
this several years ago I would have lived a much more meaningful and productive
life I believe. I'm not bitter - just relieved, alive, and hopeful."

Wow.

>I have made that sincere effort. Also, I was open to the possibilities. At
>first, I thought it was just a bad club, so, foolishly, I tried another. Few
>clubs and Hamfests later, I have begun to understand what "Ham" radio really
>is. Ham Radio is being part of "something". Ham Radio is now an applicance
>operator's club.
So...In only ONE year of licensure as an Amateur Radio operator, you have

sufficient "evidence" to make such a damning claim? Since the folks at these clubs do not like what YOU like, ALL Amateur Radio is "boring"...?"!?!

I went to Hamfest with coworker Ham and joined club before I got my license. So, more than one year of Ham Radio.

Also, I have made the effort. I do ask nicely. I say what I'm interested in. I don't pretend to be interested in things I am not. (Last time I did that just to be friendly, someone kept talking to me about the thing I was not interested in. So, I learned it is better not to fake interest). A few people have claimed interest in my activities, only to be busy with something later. There just is not enough interest by Hams to justify the effort.

Since no one knows "73"

Yes, and I took - and passed in one sitting - a commercial
first phone license test in 1956 at an FCC office in Chicago.
No kiddies at all in that test session, just a couple of beepers
annoying us during their radiotelegraph test elements. :-)

Never had to use morse code or morris code or mort's code
four years before that or in any time afterwards in making a
career in radio-electronics. That's 50 whole years. But...one
"must" demonstrate that code for an avocational activity today?
Of course, "hams" must be assured that newcomers do what
they are told and be "acceptible to the ham radio community!"
:-)

>> I'm not against kids having licenses. But I don't support them having

Unless there are other news, the VEC QPC are ADULTS.
They come up with the questions and answers. FCC only
approves or disapproves the questions-answers.

YOU can always communicate your wishes to the VEC QPC.
Go for it.

>> Well, there should be enough comprehension for at least basic safety.
>
>A lot of us tried to tell that to the FCC. They did not act on our

Hello? The VEC QPC originates the questions and answers.
The FCC doesn't specify the topics on written test element
subjects anymore.

FCC regulations on US amateur radio don't concentrate on
safety-of-the-licensee. They have only relatively recently
introduced the RF exposure limit guidelines...which have to
do with EVERYONE near an antenna...all radio services.

I don't remember any FCC amateur regulation which covered
any safety-of-the-licensee. Do you?

But, according to present-day amateur regulations, small
children who are licensed have perfect legality to transmit
without any adult supervision.

>> True, there are some. I wonder how precocious these kids are?
>
>They are probably way ahead on the developmental scales. Part nature,

This venue is NOT a court of law, genius.

Oooo...Oooo...VEs under ARRL control can DO NO WRONG!

There are *NO* FCC amateur regulations covering intelligence,
"nurturing," licensee age, mental stability, or anything else on
licensees or potential licensees. Some inference on that for VEs
but those are passed off to VECs to control.

>> years makes me skeptical.
>
>I've been around kids for the past 48 years. Gifted ones can do
>amazing things. And there are all kinds of gifted kids.

Ah, so Jim Genius has an education certificate or education
experience? In a magnet school, perhaps? :-)

Is the word "amazing" even in the FCC amateur regulations?

Jim Genius is 48, right? "He's been around kids" for all that
time? Of course, he was one!

>I am convinced that there exist children who could pass the tests as
>claimed. No evidence of wrongdoing or "fraud" has been provided.

Jim Genius MUST be convinced. His Faith and Honor seem to
have been sullied (in his perception). :-)

There are NO FCC amateur regulations in regards to any
provisions for "genius" or intelligence in regard to testing.

>There have been accusations of fraud and other worngdoing in this
>thread and elsewhere, by someone who was not at the VE sessions in
>question and has no evidence at all. Basic attention-seeking behavior
>that most six-year-olds find immature. To give those unfounded
>accusations, or the accuser, any credence whatsoever is illogical.

Tsk, tsk, tsk. "Basic attention-seeking behavior that most
six-year-olds find immature." Oh, my, lions and tygers and
pride and prejudice, oh my! :-)

ARRL VEs are above reproach! All hail the worshippers of the
church of St. Hiram! Saintly, perfect in every way! :-)

>I don't think the VEs would do such a thing. I don;t know any VEs who
>would. If anything, they'd be extra-careful, because of the possible
>publicity.

Yes, they might get their picture on an ARRL news page!
:-)

>> But if kids are passing without actually knowing anything,
>> then it is just *WRONG*.
>
>What about adults? Kim readily admits she passed by memorizing. Worked
>for her.

So, Jim Genius never, ever memorized anything? He KNEW
things intrinsically? :-)

>> If my son had wanted to take the Tech test, as
>> a youg child, I would make darn sure that he knew the material.
>
>But isn't it a double standard to hold a child to a different level of
>performance than an adult, based solely on age?

The FCC doesn't think so, does it? There are No age limits
on US amateur radio licensing nor are there any controls on
supervision of licensed children operating within their legal
license class allocations.

No problem. If children PLAYING on the radio can cause QRM
to others, that is "permissible" to you? If children PLAYING on
the radio interfere and block some emergency communication,
that is "permissible" to you?

>And if you still think memorization won't let a kid pass the test,
>just talk with a kid who's fascinated by Pokemon, or Harry Potter, and
>see what kind of memorized detail info they can spout on demand. Why
>should the ham tests be any different?

Well, ARRL could bring back the Archie comics...that's a start
to making things childishly entertaining, isn't it? :-)

I can just see the sequels now..."Harry Potter and the Chamber
of Morse!" Wizards and fairies, oh my! :-)

>Take the above question - all
>anyone needs to do is word-associate "power density", "far field" and
>"inverse square" and they have it licked. Do they really need to
>understand Poynting vectors or do exact calculations? Nope.

Hmmm...something to bring up to the Writer's Guild of America.
Now that they have on-line registry of story ideas, Jim Genius,
you ought to contact them and file your story thing!

Just change "Mario Brothers" to "Morseo Brothers" and you
might have a winner! Poke 'm Mon...right in the aye!

[no Biot & Savart? no Oliver Heaviside? no Maxwell and his
equations?]

>Funny thing is, most of the newbies I encounter really want to learn
>the material. Sometime back, there was a guy on one of the other NGs
>or reflectors I read asking about some questions on the Extra test.
>They are simple Thevenin equivalent circuits (though the test doesn't
>call them that). The newbie was having trouble understanding how to
>solve the problems, so I helped him out.

Oh, that's such a nice story...<sniff, sniff>

>The important thing was that
>he knew there were only ten of them in the Q&A pool, and that he could
>easily memorize the answers. That wasn't good enough for him - he
>wanted to understand the material.

Another six-year-old? Perhaps eight? As old as nine?!?

>Time for boko-maru!

Why not? "Bokonon" is a FICTIONAL creation of Kurt Vonnegut.
Some of you guys are all into fantasy and role-playing and other
emotional satisfaction things...like "saving the Titanic (again) with
morse code skill" and stuff like that there. Sigh.

If the FCC had enough people to monitor VE sessions, then we wouldn't need VEs.

So now I'm curious Steve, who is monitoring the VEs at an exam session?

>>But I don't support them having
>>licenses if they don't comprehend what they should know.
>
>You just got rid of most NEW HAMS

Wrong. I am a newly licensed "Ham" and (for the most part) understand the material.

Its only-coders, who are opposed to learning the material. They should be called CBplussers, not Technician licensed that don't want to learn the code. I don't want to challenge you, but you have given no indication that you are not a CBplusser, WA8LUX. You may very well not be a Cbplusser, but all I see is insults towards no-coders. I do not hear you saying you want Hams to learn the material.

>A hate to give you the Bad News, but not just kids, most new CBplussers dont
>have a CLUE
You assume everyone used a CB before they became a Ham. That's not true. You seem to be saying learning Morse code automatically makes you better technically and not learning it automatically makes you worse. I don't see the correlation. Morse and technical skills seem like two separate, unrelated skills.

You don't have to be pressured into learning code. For those undecided -DON'T learn Morse code.

Noone (Ham or non-Ham) likes only-coders.

There is a "secret" society in Ham radio (Wuoff Hong). At 12 midnight you must make a pledge regarding Morse code. I do not know anything else about it because I did not join it and those who join it are sworn to secrecy. I had a chance to join it at a Hamfest. The leader of ARRL was there also. Surprisingly, he came across as a very true "Ham". At dinner time a bunch of people came out in costumes and sticks (it was not near Halloween) and started chanting "Wuoff Hong, Wuoff Hong… ". Strange looks were observed from Hotel guests.

Only cost $2 dollars to join(I spent much more already that day). The Hamfest ended at 9 and I realized I would have to wait three hours for whatever this turned out to be. Without the wait, I might have stayed there just out of curiosity. Was the wait deliberately introduced as part of the "test"? I did

not like what this implied. Most at the Hamfest were of a certain gender, age, and size. It was probably okay for these type of people. I decided it was probably not worth the wait and asked for my money back. I got my money back. More importantly, I did not pledge to the cult.

The nearest I ever came to anything like that was in 1965. I managed to have a **reasonable** qso with Mike, W2OY, on 75. Never liked 20 meters (except when on Guam Island as it was almost always open to the states for a number of hours). 160, 80, 40, and 15 were my hangouts (mostly 160). About 80% of the contacts were CW. These days it's 440 FM. Oh, a very few folks whining over cw vs. no code, but no bad operators that I've encountered. I haven't been on HF since 1970.

Back in the 60s, W2OY was very well known. His cq went something like "cq cq de W2OY .... no lids, kids, space cadets, or school bus riders. Only class A operators on this frequency from W2OY". He was a classic. Actually, a very good friend of mine, Tim, WB2KAO, tells me he was a nice guy in person ... I think he enjoyed 'trolling' the radio the way some folks troll the newsgroups ;-)

73 from Rochester, NY
Jim
ps - I use Tim's machine quite a bit. Nice bunch on there. We became friends in 1963.

writes:
> Amateur Radio is anything BUT "meaningless".

Quote from long time Ham:
"I have lost interest in ham radio - it has lost it's magic. At first I was
disturbed by this, questioned it and even tried to make myself interested
again. As time went on I realized I have perhaps matured as a person and I had
broken free from those childhood (childish?) feelings and motivations.

I now realize I spent several years engaged in an activity with very little
tangible return - thousands of dollars and just as many hours in a MEANINGLESS
pursuit -a grown man playing with substitute toys as it were. If I had realized
this several years ago I would have lived a much more meaningful and productive
life I believe. I'm not bitter - just relieved, alive, and hopeful."

Wow.

>I have made that sincere effort. Also, I was open to the possibilities. At
>first, I thought it was just a bad club, so, foolishly, I tried another. Few
>clubs and Hamfests later, I have begun to understand what "Ham" radio really
>is. Ham Radio is being part of "something". Ham Radio is now an applicance
>operator's club.
So...In only ONE year of licensure as an Amateur Radio operator, you have

sufficient "evidence" to make such a damning claim? Since the folks at these clubs do not like what YOU like, ALL Amateur Radio is "boring"...?"!?!

I went to Hamfest with coworker Ham and joined club before I got my license. So, more than one year of Ham Radio.

Also, I have made the effort. I do ask nicely. I say what I'm interested in. I don't pretend to be interested in things I am not. (Last time I did that just to be friendly, someone kept talking to me about the thing I was not interested in. So, I learned it is better not to fake interest). A few people have claimed interest in my activities, only to be busy with something later. There just is not enough interest by Hams to justify the effort.

Real Translation: Ham radio is an integral part of my life, not my whole life. That is part of the "principles and premises" of being an amateur radio licensee.

By the way, it would be "Great Dumb-down" not Grate Dumdown. Isn't that a little bit of the pot calling the kettle black.

If I had a dollar for every person that felt that same way, I guess I would be able to take that year long vacation. It is a sad state when you have optomistic, upbeat new hams that encounter these groups of people in some of these clubs and get turned off.. I can see how people could become rude, crude, boorish and bitter like some select people here.....

Wow.... not saying I agree or disagree with your comments below, but an actual well-thought-out commentary, fairly grammatically correct and spelling fairly decent..... I am surprised, and almost even impressed. Did you have someone write that for ya Dick?

The last time you asserted any "knowledge" of children or childraising
(specifically your suggestion over an age limit for Amateur Radio), you were
asked YOUR practical expereicen in child raising

You are again asked to provide that information.

>Amateur radio is
> basically a hobby, an avocation involving radio activity, despite
> all the self-described patriotic bwahaha about being some kind
> of "service to the nation."

Amateur Radio IS a "service to the nation", and exactly what "service" the FCC expects from us is outlined in 47CFR97.1.

>Case in point: Part 95 radio-control of model aircraft and model
> vehicles.

Not germane in any way, shape or form to AMATEUR Radio.

>It is no "service
> to the nation" as important for security of the citizens, just
> a service for some hobbyists who enjoy their activity, an activity
> not essential to aeronautics or any other science involved.

Nor is such codified in 47CFR95. It >>IS<< codified in Part 97, however.

>Model aircraft flyers don't received such a Title and rarely
> append their AMA number to their name...or loudly proclaim
> their activity as "authorized by the Federal Communications
> Commission!"

Mostly because their AMA number is NOT internationally recognized, not do they participate in that hobby for the purpose of the RADIOS...The do it to make the model operate by remote control. The radio is just a tool.

In Amateur Radio, th RADIO is the reason we are here. It IS the reason we go to the effort to get licensed.

If you were licensed and participating in Amateur Radio, you MIGHT know this.

>Most radio amateurs scoff at model flyers' activities, trying to
> emphasize that they are "more adult" than those "playing with
> toys."

Ignorant and spiteful, at the very least. A boldface lie at it's worst.

Lennie...you were doing sooooooooo good this week. You're falling back, though...

I thought there was hope for you.

"response".

>I am sorry, Jim Miccolis,N2EY. I thought you called me creep and putz, when
>actually K4YZ did. By the way, neither putz, nor creep are in the dictionary.

Yes, they are.

>Quote from long time Ham:...(SNIP)

No author...no attribute...no facts...Just an alleged quote from ONE
alleed Amateur Radio licensee.

>Wow.

"Wow" is right, Vipul. I am amazed that anyone would cite this quote and
not identify the author. Without that authentication, the cite itself is
MEANINGLESS. and in ANY case, it is ONLY the opinion of one person, and by any
stretch of the imagination, that opinion represents only 1/750,000th of the
overall Amateur population.

Even if there were 10,000 who held that opinion, it would still represent
less than 2% of all licensees. HARDLY what I would call "impressive".

>I went to Hamfest with coworker Ham and joined club before I got my license.
>So, more than one year of Ham Radio.

I see...

>Also, I have made the effort. I do ask nicely. I say what I'm interested in.
>I
>don't pretend to be interested in things I am not.

Then let's have a bit of a civics lesson here, Vipul.

You are residing in the United States. We have chosen a democracy-type
society which means, unfortunately for you, that "majority rules". This ALSO
means that, again unfortunately for you, that if the majority choses to do one
thing over another, that the minority can either join in, or may feel free to
NOT participate and go elsewhere.

Luckily for you, you ARE residing in the United States, because in the
U.S. the minority is free to go about their way WITHOUT following the

"majority". You are cordially invited to take that path, Vipul...No one in this forum will stop you from going about your way...

It would appear that you are insisting that Amateur Radio conform to YOUR choice of specific interests, lest we be branded "boring" and "meaningless". Ain't happening, Pal.

>There just is not enough interest by Hams to justify the effort.

Then I wholeheartedly suggest that you NOT participate in this forum anymore since it can ONLY be BORING and MEANINGLESS from YOUR perspective.

The majority of Amateurs are NOT going to stop "doing" what they like in order to placate YOU.

You are still at liberty to pursue WHATEVER activities YOU find interesting, however I think you will find that if you keep trying to brand and insult people who don't fit YOUR mold, you are going to be very lonely and continuously on "the outside" of whatever interest group you are lurking.

You seem to be a very bitter and shallow person, Vipul. You have had nothing but BITTER criticism of anything to do with Amateur Radio or Amateur Radio Operators since you "joined" this forum. You have not offered one bit of CONSTRUCTIVE criticism...just criticism.

May I suggest that you consider another hobby? Hang gliding, maybe?

>Its only-coders, who are opposed to learning the material.

Here you are with this "only-coders" thing again, and you are STILL
ignorant of the fact that while one CAN be an Amateur without knowing the Morse
Code, one cannot be an Amateur without having passed the written exam.

Ergo, there is no such thing as an "only coder".

>I
>don't want to challenge you, but you have given no indication that you are
>not
>a CBplusser, WA8LUX.

Bruce is an Extra Class licensee, Vipul, but he is an ignorant,
functionally illiterate, trolling Extra Class licensee. He is the very epitome
of the term "white trailer trash", and should be considered "personna non
grata" when it comes to his assertions of "CBPlussers".

If you take ANYTHING he has to say with any seriousness, you are making a
fool out of yourself. That's why keep Brucie in the killfile.

Speaking of . . . there's a new Canadian 60m ham station on the air
"doing propagation studies" a la the ARRL and he's already worked a
bunch of U.K. dxcc entities on 60m. The first 60m dxing is a done
deal. NTIA aside.

> 10 was very popular.

Ten was the equivalent of 2m today for neighborhood comms and for a
good reason. There wasn't *any* 2m commercial gear available, none,
zip, much less any 2m mobile gear. 2m then was the earlier version of
the 2400 Mhz. band we have today. Roll yer own or fuhgeddit.

Those 10m AM mobile rigs were huge and ya didn't just plug 'em into
the cigarette lighter either. Unless you had a 35ï¿½vdc cigartette
lighter. Mag-mount & lip mount antennas? Ball & spring mount eight
foot whips or fuhgeddit again. Nor were they FM which is mostly
unaffected by ignition noise and the ignition systems of those days
were incredibly leaky noisy *junk* compared with today's. A decent 10m
AM mobile rig involved a lotta work & a lotta expense. I'd love to
know how many nocodes would go thru those pushups today just to get on
the air from the car.

It was one of those lashups which led me to ham radio. I'd been
building small swl rcvrs but didn't have any direct contact with a ham
until the night I grabbed the opportunity to be the Cub Scout message
runner for Gene Reynolds w3ean who was "the mobile ham" for our little
burg during a late '40s CD drill. That cooked it, been uphill ham
reddio for me ever since.

Popular yes, lotta press, but the net result was that there were
actually very few mobiles on the ham bands back then on a percentage
or on any other basis. Helluva lot of home stations parked on 10
though.

Since I'm once again into belaboring fundamentally irrelevant ancient
history I'll also point out that the first ham repeaters also popped
up in that timeframe. The long-defunct Delco Radio Club (w3duu) was
basically a collection of WW2 radio wizards from the Philly Navy Base

comms labs.

Us Novices who belonged to the club were their Field Day boy tools, we did the trees & aerials, the usual. But they did the Repeater from Hell. Input was on 10m AM, mobile or fixed, din matter. The output was on 75m. Which was OK in those days because the mobile rigs were usually separates which could talk 10 and listen 75. Multi-Elmacs, etc. Which was really cool because they could run 75m "skip simplex" with quite distant stations and/or with each other when transmitting on 10m. Full duplex was easy with crossband reversed splits.

Which ya cannot do with the 2m machines today. The 10m machines are a close as ya can get now with what they did 1n 1947 or so. But only when the spots are up. The spots doan mean squat +/- on 75 so thier thing was always "up".

It was the output side of their monstrosity on 75m . . . a bloody 833 100% modulated by a pair 'o 813s . . The 813s alone ran a Kw. Was not in accordnce with an ARRL bandplan or "coordinated" either . .

Could be that hams had repeaters up and running on the air long before the Motorolas of the world finally got the drift. Or were able to sell it. Versus the folk lore about ham repeaters being the result of commercial & emergency services castoffs 2ï¿½ years later.

> >15M being the standard IF freq of the TV
> >rcvrs of those days. Whatta disaster THAT was. Musta been one of

41-42 Mhz IFs were another masterpice in stupidity . . . 45 Mhz woulda worked. And we got to pay for it. Dumshits.

That's a quote from ONE "long time ham". Here's another:

"I've been a ham for many years, starting out as a teenager. Ham radio
is more fun for me now than ever before. There are more things to do,
more hams to QSO, more contests and operating activities, more bands,
more modes, better equipment, more resources. And it's all less
expensive than ever before."

"My biggest ham radio problem is frustration because I don't have
nearly enough time, space or money to do all the ham radio things I
would like to do. But that's just life. So I do the things I like best
and let the rest wait for another day."

"I do lots of things besides ham radio. But it's a great source of fun
and adventure for me, and has been since I got started. I look forward
to many more years on the ham bands."

I think I understand what Vshah's problem is, Steve.

Most of the hams I know are hams because of interest in radio itself.
Usually an interest in actually OPERATING radios, just for the heck of
it. IOW, radio for its own sake. Such interest takes a wide variety of

forms, from contesting to RC to APRS to public service. And while it's nice to be surrounded by local hams who enjoy the same things, such local support is not essential, because they will seek out other hams with similar interests. The Internet makes this easy - if there are no local hams interested in, say, satellites, you can find aplenty of hams interested in satellites in the various newsgroups, reflectors, etc. Plenty of books and other resources, too.

It seems that what Vshah really wants is for other local hams in his area to be interested in the same things he's interested in, and follow HIS guidelines and requests. For example, his local club should do Field Day the way HE envisions it, and the more experienced hams should bend over backwards to show and teach him everything he wants to know. His "effort" consists of going to a local hamfest or two, and a Field Day, and being disappointed because the locals he's met aren't interested in the same things as he. And, for him, it's not worth the effort to do those things on his own. Unless he can be the leader and dictate what is and is not "boring", he doesn't want to play.

Adding to this confusion are Vshah's use of words and phrases like "X is boring and meaningless" without qualifying them ("X is boring and meaningless TO ME") which makes him sound like he is putting down practically everything most hams like to do. Phrases like "appliance operator" and comparing Morse to four year olds' toys sure don't make people want to help him.

--

I know a local ham who was frustrated by the way the local clubs did FD. So he acquired a generator and tent, built a portable antenna system, generator shelter and extension cords. Found a good location, got permission, and proceeded to do a solo FD effort. Had a ton of fun and made more points solo than the local clubs he'd worked with before. A lot of work but well worth the effort because radio was the prime interest.

Then a funny thing happened. The local clubs got wind of this ham's activities and invited him to do FD with them again. They were a lot more open to his ideas and methods than they had been before, because of his proven track record. One year they even used his callsign for the club FD effort.

You catch more flies with honey than with vinegar, Vshah.

That's a semantics thing, 'tis questionable to call a 'puter screen
part of a ham station. We can all run phone/cw all day all nite
without a 'puter. I run CAD all day all nite with this CRT and that
sure ain't ham radio. Dual use.

Fact is that CRTs are headed for the bit bucket of electronics history
too. LCD screens are coming down the pike at a huge rate and they're
great. Cometh the the first decent 19" LCD screen for under $500 and
this creaky abominable old 21" CRT lands on the curb on trash day.
I'll give it two more years and I'll be "hollow-state cleansed".

You better squirrel away some NOS CRTs while they're still out there,
ya never know what the tube-huggers will pay for 'em. Someday.

> >they're much more expensive than the equivalent tube amaps. By a
> >factor of two or three so far.
>
> The exception that proves the rule.

When do the exceptions become the rule? That's gonna happen in the
case of solid vs. hollow state high-power amps. For absolute certain.

> >with knobs ya gotta dork with, etc. There are flocks of hams who have
> >taken the big hits in their wallets to buy that capability.
>

> >don't think for one minute that I'd buy an MFJ amp just because

> >they're cheap do ya?
>
> That's you. Most hams will diddle a few knobs to get the suds.

Is not the discussion and it ain't just me at all, there are (at least) hundreds of solid state legal limit HF amps out there already. The discussion is solid state devices being able to do anything anywhere in ham radio tubes can do and in general they do it much better.

With the current costs I wouldn't do a solid state amp, I'm not into taking shots at the boxes, would never happen under any condx so yeah I'll stick with the knobs for now.

Beyond the box chasers solid state knobless amps have application for the lazy & inept, I suspect that's a bigger market driver than high-speed spots-pouncing. Imagine Brainiac loose wih a Henry 3K or an Alpha. He'd toast it and prolly himself too in less than five minutes. Which would only leave The Putz around here for comic relief. Ugh.

So is 20m spread rectum. All the "synthesizer" in that thing did was create wall-to-wall birdies and noise. One of the flat-out worst rcvrs I ever tuned since my daze with the S-40B. But I worked a helluva lotta dx on 80 with the S-40 which I'll just bet I couldn't have copied with the HRO-500.

> >

> is lost in the stages ahead of it.

Amen. DSP ain't gonna "arrive" until it happens somewhere up close to the coax connector. The el cheapo 500Hz xtal cw filter in my lame litle underdash TS-50 xcvr has a far better shape factor than any of the "sharp filters" in my whizzy all-DSP NRD-545.

Jim:

I guess I was addressing the issue from a "20/20 hindsight" point-of-view. You obviously have the best handle on the history of Incentive Licensing of anyone I know. Still, as a Post Incentive-Licensing ham, I don't consider it to have been
a bad thing. If I had been a General or Advanced at the time, I'm sure my outlook would be quite different. However, I like to think that, like yourself, I
would have picked myself up, dusted myself off, and gone out and taken the tests for Extra.

It is designated as a Service by the FCC in no more different a way than CB,
or any other radio hobby, is. To the FCC it is defined as a service
(because the gov't. obviously should not endorse or legislate a hobby) but
to many hams it is a hobby. For me, it is a hobby first and a service
second.

Do you really think you will get a list, or any sort of logical
response to that request?

> No one said they had to UNDERSTAND the questions OR the answers

Another BFOO, but it was necessary.

> The FCC, in all it's wisdom, took that away when it "legalized" verbatim Q & A
> manuals.

Actually, it was taken away long before that point. When FCC went to
all-multiple-choice, it became possible to pass the written exams
without demonstrating comprehension. That was about 1960-61.

Some would say that the change happened even earlier, when the essays
disappeared. Diagrams can be memorized without understanding how a
circuit actually functions.

Another BFOO. But some folks just don't get it, Steve.

Actual memorization is not needed, either - just enough
word-association to pick the right answer out of the four presented.
As was shown in the "far-field/power density/inverse square" example.

Just the other day I watched and listened as a first-grader read the
back of a ketchup bottle, rattling off words like "cholesterol" and
"carbohydrate" without missing a beat. Does the child fully understand
those terms? No, but the child could recognize them and read them. And
if asked, could give the response "something in food" or "something in
ketchup".

> I'd rather see 10,000 under-12 licensees than ONE of
> them out playing with drugs, illegal guns or premarital sex.

YES!! If ham radio keeps even a few kids out of those problems, or
even diminishes their appeal, that's a VERY GOOD THING.

> How dare you "accuse" anyone of ANY kind of "fraud" who took advantage of
> codified regulations to get what they want.

It's called "trolling", Steve.

> Actually, the TEST itself (content, manner of administration) is quite
> appropriate...It's the open selling of "study guides" that give away the
> answers verbatim that is a "sham".

FCC doesn't think so. Here's why: FCC has not had lots of problems
because hams don't have a thorough comprehension of the technical
aspects of the test. In fact, FCC's biggest problem with hams is those
few who violate the rules wrt operating (jamming, not IDing,
obscenity/profanity, uncoordinated repeaters, etc.). Technical
troubles are almost off the FCC radar screen wrt hams.

Do you see ANY examples of problems in the ARS being caused by the
licensing of young children who pass the required tests? I don't, and
those challenged to provide examples have none. That's the most
important fact.

Here's the real "problem", Steve. Here's what motivates somebody who
actually petitioned the FCC for an age requirement of 14 years for a
ham license:

(These are not MY ideas, just observations of another's arguments)

If young children are licensed, they might be hams for a very, very
long time. They might get their friends interested in radio,
increasing the ranks of hamdom still more. They will drag the
median/average age down dramatically. They may become interested in
engineering, radio or electronics as a career, and do well at it
because of an early background in the basics. Their interest in it may
keep them out of trouble, help them with their studies, and promote
responsibility and character development.

And it gets worse:

Young hams may not be satisfied with HTs and entry level licenses.
Many of them will learn more, upgrade, and become proficient and
experienced hams long before they are 14. They will be in control of
powerful radio stations, contacting other hams all over the world.
There could very well be tie-ins with their schools, Scouting, the
ISS, etc.

Still worse:

Young hams may actually learn, use and prefer Morse code for their
amateur radio operations, because it does not immediately reveal the
age and gender of the person using it, only their skill at using it.
Test or no test, if kids think something is cool, they'll move heaven
and earth to learn how to be good at it.

All of this may happen without giving FCC any problems, or requiring a huge influx of mandated programs to "save the children".

These are all VERY GOOD THINGS for amateur radio - which is exactly why at least one nonham is so against them.

Now do you understand what inspires those completely-unsubstantiated allegations, Steve? And why you'll never get any evidence of the allegations, just more trolls from the accuser?

Jim,

That's how I remember it - or at least how I remember it being told to me by the "old-timers" back in 1969 - when I was first licensed - and was a kid, a lid, and a WB - there was no way I was going to respond to the guy's CQ! ;-)

It's ironic that this discussion thread emerges after all of these years - pretty harmless fluff compared to some of the traffic you hear on the airways today -- but 33 years ago W2OY was a pretty radical dude.

Ah, yes, another "informed technical evaluation" based less on physical metrology than on some metaphysical laying-on of hands under the dashboard. :-)

If Kellie only does "CW," why does he have nearly $2K worth of state-of-the-art receiver (nearly another $1K for accessories) that is more suited for exceptional voice and data reception? For show rather than blow?

Does Kellie have so much money that he can afford the test equipment necessary to prove the "far better shape factor" of his TS-50 under-the-dashboard-dust-bag? Or is he simply blowing his usual superheated (non-technical) air? :-)

>second.
>
>Kim W5TIT

Throughout Title 47 CFR, "service" is a regulatory term denoting
a type and kind of radio activity.

Too many radio amateurs follow ARRL-implicit "definitions" as
being some kind of "service" to the nation or a "service" to the
community. One is perfectly free to do any sort of service to
the nation or to one's community without any amateur radio
license. The problem to those is that "community service"
doesn't carry the emotional/ego perk of a TITLE, a callsign
"authorized by the government." Self-defined "servicemen"
are apparently play-acting some fantasy game when they try
to align their avocational activity as some sort of paramilitary
or government-service doings.

Does the US government "endorse a hobby?" Not strictly
speaking that way, Part 95 Personal Radio Services, defines
Citizens Band Radio Service, Radio-Control Radio Service,
and Family Radio Service as "for personal use." Something
that is personal is not in the general definition of doing a
"service" (to nation, to community, etc.). The Titleists, the
self-glorificationists, scoff and denigrate such radio use
because those radio services do not require a Test or a
License nor does it require some stepped Guild/Profession/
Union proficiency and tenure to achieve "prominence" in that
activity. Without Titles, Rank, Class, Callsign "approved" or
"authorized" by the government, the unlicensed radio services
aren't attractive to those needing self-glorification.

The US government supports the National Forestry Service,
a rather remarkably large organization having an enormous
budget, staffed by paid and (sometimes) uniformed workers
to maintain and preserve national parks, monuments, and
land preserves. Such do not "serve" any direct need to the
nation but are for all the citizens to enjoy, to visit, to camp
in, to indulge in what some outdoorspeople call a hobby of

being outdoors in nature. Is camping out a hobby in the strict sense of the word? No, yet tens of thousands use that term just as others list sports activities as hobbies (sport is an athletic activity, usually in competition but not necessarily so). National parks serve no direct need to the nation for safety of citizens or communities and take up vast quantities of land that could be used for other more productive purposes.

Some radio amateurs are too focussed on emotional-ego aspects of their hobby activity and cannot handle the term "amateur" even though that is also a regulatory term meaning no pecuniary interest. They want to think of themselves as "professional" on an accomplishment-credential-license level and insist on the guild/union/professional stepping up "through the ranks" for all...as apparently they thought all had to do. Some radio amateurs insist on being called "hams" despite the origin of that appellation being derogatory and applied to early radio amateurs by early radio professionals. The resentment lingered for generations and still continues, some modern-day hams bitterly resenting the fact that hundreds of thousands of radio professionals exist, have existed, and will continue. Hams don't want to consider themselves "amateur" in any way because that is demeaning to their Titles, Statuses, and self-described wonderfulnesses. Those who overstress the use of "hams" are really IN the hobby for the sake of self-glorification, actual radio activity being secondary to that all-important self image. :-)

US amateur radio can be a fun hobby, an avocational recreational activity with social rewards as well as an intellectually-stimulating one (insight to science and technology). Because that activity emits EM waves, it must be regulated by the government in some way so that all RF emitters can co-exist relatively peacefully. The FCC does that regulation partly through licensing. Unfortunately, too many have ascribed too many things to license grants (the "academic credential" substitute) with callsign (title) and class (status)...all out of proportion to their worth...because those same individuals want and even Need self-glorification...or to make US amateur radio a WAY OF LIFE. In doing so, those same Seekers of Personal Glory insist that all do as they did since they are (to themselves) the "model" to emulate.

Those who take up amateur radio avocationally, as just a hobby, a fun thing to do in their spare time, are regarded as "second-class" and probably not fit to cohabit the planet with these self-defined Seekers. One result of that is the fun and games with the Seekers of Personal Glory in here, stoutly and pejoratativly maintaining they are "above" the plebians. They are SERVICEMEN! :-)

How many FRCers don't have a computer CRT in the shack?

It's getting to the point that most hams who do any half-serious
contesting, homebrewing or dxing have a dedicated shack computer. Not
to mention digital mode types.

First all solid state legal limit HF ham amp I ever saw was cover
story of QST. April, 1976. Expensive monster, but I figgered 3-500Zs
would soon be worthless. More'n a quarter century and they're still
expensive.

> copied with the HRO-500.

But - but - the '500 was designed by PROFESSIONALS! It was pioneering!
That old S-40 had METAL TUBES, fer gosh sakes! It cost a lot of money
and the professionals said it was "better"!! Most military HF rxs of
that time were closer in design to the '500 than to the S-40. How
could any of us lowly hams dare to argue with that?
>

No they haven't. There never has been a requirement to use standard
phonetics. Shoot, the ARRL had a different phonetic alphabet in the
'60s (I don't know when they changed) than the ICAO one that was
standard for the FAA and the military. They couldn't possibly have
promoted that if the FCC had any "standard."

I forgot to include the worst part, Steve:

If young children are licensed, they might actually wind up having (gasp) FUN with radio! On the air! With actual LICENSES!! While PROFESSIONALS IN RADIO sit on the sidelines!

Now watch out for the pool-pah

Most likely an urban legend as the FCC did not require the use of
standard phonetics. We made up all kinds of phonetics for our
calls. The last three letters of a friend's call who drove for
Greyhound Bus was DGD (Drunk Greyhound Driver), another was AGG
(America's Greatest Gabber), ect., ect., ect.
No one was ever cited and the FCC did quite a lot of monitoring of
the ham bands in those days.

Dan, I think he used to state "no wet-bottom boys". He'd sometimes speak with a station with a WA prefix, but seldom to a WB. I did chat with him once and had a fairly nice chat. At the end of the chat he said he'd have to go as his grandkids were arriving. He said his grandkids needed a paddling. ;)

Right. "adam, baker, charlie, david, edward, frank ..." was the ARRL
phonetic alphabet whilst the military used "alpha, bravo, charlie, delta,
echo, foxtrot ...".

A Redneck Christmas

'Twas the night before Christmas And all through the trailer
Not a creature was stirrin' 'Cept a redneck named Taylor.
His first name was Bubba, Joe was his middle,
And a-runnin' down his chin Was a trickle of spittle.
His socks, they were hung by the chimney with care,
And therefore there was a foul stench in the air.

>From out in the yard There came such a noise
That Bubba got scared And rousted the boys.
There was Rufus, 12; Jim Bob was 11;
Dud goin' on 10; Otis was 7.
John, George and Chucky Were 5,4, and 3:
The twins were both girls So they let them be.

They jumped in their overalls, No need for a shirt,
Threw a hat on each head, Then turned with a jerk.
They ran to the gun rack That hung on the wall.
There were 17 shotguns; They grabbed them all.

Bubba said to the young'uns, "Now hesh up ya'll!
The last thing we wanna do Is wake up yer Maw."
Maw was expecting And needed her sleep,
So out they crept out the door Without making a peep.

They all looked around, and then they all spit.
The young'uns asked Bubba, "Paw, what is it?"
Bubba just stared; He could not say a word.
This was just like all of The stories he'd heard.

It was Santy Claus on the roof, Darn tootin'
But the boys didn't know; They was about to start shootin'!
They aimed their shotguns and nearly made a mistake
That would have resulted in venison steak.
Bubba hollered out, "Don't shoot, boys!"
That's Santy Claus And he's brought us some toys.

The dogs were a-barkin' And a-raisin' cain,
And Bubba whistled, and shouted, And called them by name.
"Down, Spot! Shut up Bullet! Quiet, Pete and Roscoe!
Git, Turnip and Tater and Sam and Bosco!"

"Git down from that porch! Git down off that wall!
Quit shakin the trailer, Or you'll make Santy fall!"
The dogs kept a-barkin' And wouldn't shut up,
And they trampled poor Pete Who was only a pup.

Santy opened his bag, And threw out some toys.
Bubba got most, But left a few for the boys.
>From up on the roof Santa heaved a great sigh.
Since the guns had been dropped He just might not die.

He jumped in his sleigh, Told his reindeer to hurry.
The trailer started to wobble Santa started to worry.
Just as the reindeer Got into the air,
The trailer collapsed, But Bubba didn't care.

He was busy lookin' At all his new toys.
Then a thought hit him, And he said to the boys:
"Go check on yer Maw, Make sure she's all right.
That roof fallin' on her Could-a hurt just a might."

But Maw was OK, And the girls were too.
They fixed up the trailer; It looked good as new.
And as for Bubba, He liked Old St. Nick,
But Santa thought Bubba Was a pure-in-tee hick!

Bubba had a nice Christmas, And the boys did, too.
And the Taylors wish A Merry Christmas to you!

That all depends on what questions were actually on the test given, and the
child taking the test.
>
> My point is that the kids probably aren't comprehending the test, so
>something else is likely helping them get the ticket.

But again, it's not a test of comprehension. All anyone has to do is get enough
multiple-choices right, and it's license time.

>Although for the
>general and Extra, I contend that it would be harder to memorize the
>tests than to just learn them, it is probably possible to memorize the
>Technician tests.

What really goes on, I think, is a mix of various learning strategies.

Some stuff is simply rote-memorized, with no real understanding. In some cases
(band edges) that's the only way! Some kids are detail-oriented, and capable of
memorizing amazing amounts of data. Many of the detailed stories of young hams
passing the upper-level tests say flat out that the child simply memorized the
Q and correct A for huge parts of the subject matter.

Then there's word-association. The "inverse-square/far-field/power density"
question is an example. Really a form of memorization, in a way.

True comprehension happens at all levels. Even young children can learn that
the FCC is in charge, VEs give the exams, hams can't take money for hamming
unless they are schoolteachers and it's part of the curriculum, etc.

> And before anyone points out the exceptions of genius, I am referring
>to normal kids.

Genius IS normal, it's just not average.

More to the point, the young children getting licenses may indeed be geniuses or prodigies, with exceptional gifts. A picture isn't going to tell you a chuild's developmental level. After all, what makes these stories newsworthy is that they are unusual!

Reminds me of W7TPG, Herman Middleton. His schtick (50's & 60's) was
along the lines of "Calling CQ from W7TPG, W7 Tuned Plate Grid, "from
the beautiful 'valley of the sun', Phoenix, Arizona, where the birds
fly backwards, not because they don't trust each other, but because
they want to keep the sun out of their eyes."

Well Jim,

I've got a 5 yr. old lass who thinks playing "the beeps game" with Daddy's practice oscillator is loads of fun...and she doesn't even realize that she's got six Morse characters committed to memory. (Or does she?...)

She's in Kindergarten and they must take a book from the school library once a week and have their parents read it to them. Well, Imagine this proud papa's surprise when she brought home a book entitled 'Radio Rescue.' This book was written by Linda Barasch, the daughter of an OT who got his ticket in the 20's. It details how his interest in radio was piqued, how he was Elmered, his persistence in learning the code, (He failed the first time out, but kept on. No B&M'ing back then!) his trip to Cortlandt St. to gather parts to build his first rig, and lots more leading up to the point where he actually violated a reg to effect the radio rescue to which the title refers. I'm going to order a copy for our own personal library. When I asked her if she wanted earn her license to talk on Daddy's radios, I received an enthusiastic "yes!"

Kewl Beans!

Here's the Amazon link.

Yes, 60m is in vital need of exploration and experimentation. The
ARRL proposed, however, that 60M be a domestic band for USA ops. I
guess we'll do our exploration and experimentation a little closer to
home.

Yeah Rich is history. His pride overtook his brain and he is history. The Herpster will be back. He shucked and jived his way back into ham radio. Check 14.300in the mornings for Queenie and Herby fun hour.

Welcome back Mike. Hope ya get the tower up and no one comes down to visit ya anymore. Poor Judy has given up on ham radio tho. So who are you going to talk to about masturbation? Maybe you can find David Tolassi to help you out there, eh?

Oh one more thing Captain....grin...we both know thats bull don't we?. Be careful of the 'enforcer'. He talks softly and carries a big stick. They call him Riley......ask Polly about him.

The Extra exam which you took consisted of a) the written portion and b) the morse exam. To pass the exam, you'd have had to pass both of them. Since you did not, your claim is factual only under the Bill Clinton interpretation of "factual".

Well, now you're going to get me started on Blackie, W6HLH.

He'd sit on 28.503, or 14.203 (back when the American phone band
stopped at 28.500 and 14.200) and call,

"CQ, CQ, CQ; CQ 10 (20) meters. CQ, CQ, CQ, California calling, dubya
six, hotellll, leema, hotellll, calling CQ on 10 (20) meters. Dubya
six, hotellll, leema, hotellll, listening this frequency or 28.495
(14.195). If you are transceiver equipped, tune your VFO to 495 (195)
and turn your RIT to the far clockwise position. CQ, CQ, CQ; CQ 10
(20) meters. CQ, CQ, CQ, California calling, dubya six, hotellll,
leema, hotellll, calling CQ on 10 (20) meters."

Eventually someone would call him and there wasn't much to listen to
after that. He was a far better CQer than a QSOer.

"Buh-lackey, neeeear the airport...Saaaan Fraaaancisco". I've heard him use "Honolulu-London-Honolulu" to break the monotony of those 10 minute CQs :-) "All Collllllinnngs (sic) equipment"
Funniest part was when he finally unkeyed and there was a great pileup of people razzing him for being such a lid.
I actually had a QSO with him once. It basically consisted of a 10-minute monologue from him of how everybody on the band was an asshole. He went into drunken rambling spells in some of his CQs where he just went on and on muttering about how everybody was.
I'll give the OF his due, he always had one helluva signal!

I'm not bitter. Its just that Ham radio is not what I expected it to be.

I have given constructive ideas. I made a list of some 20+ ways for better amateur radio (in the 7 steps to improve Ham Radio). Okay, some of the items were not useful or just insensitive. However, overall its sincere. My list was well received by those that were willing to consider it. It was more relevant to the topic than what Wouff Hong had to say and what WA8ULX says about "CBplussers"

I even had a few members join my type of radio club. However, I did not have the resources to continue it at the moment. I would encourage others to start a similar club. I would join this type of amateur radio club.

>>
>>N2EY
>
>There's no doubt that there are a lot of people upset with the current
>testing scheme.

True. But what can be done to make it better? Many of us suggested ways to
improve the system in our comments to the FCC, but instead the FCC reduced the
number of written tests and the number of questions. It's clear FCC doesn't
think the system needs fixing.

>It's so pathically easy, that I remember a story in QST, prior to VE
>testing, in which a 12-year-old walked into an FCC field office with no
>license, and walked out an Extra.

That must have been between 1976 and 1983. What's the problem with a 12 year
old Extra, if he got the license honestly? I don't think he thought it was
easy!

>There is, however, one thing that everyone is
>overlooking, and that is the fact that a license is only an entry level test.

Many of us are not overlooking that at all. The test simply means the folks who passed it have satisfied FCC requirements, not that they are fully qualified to do everything the license allows. Just like a driver's test doesn't usually test a new driver at night, in snow/rain/fog/ice conditions, etc.
>
>It, by no means, indicates that one is an expert in the field of radio
>electronics. Sure, the license will get you on the air, but the learning

Exactly. And for most hams, that's exactly what happens.
>
>In a sense, this is how I became discouraged with amateur radio. It seemed
>that the hams I met were only concerned with working DX or the next contest
>that came around. They assumed, incorrectly, that I wanted the same thing. I
>asked about various antennas or transceivers, and the response would be, "That

>antenna won't do you no good in a contest."

You obviously fell in with a bunch of dx/contest types. Their continued learning is in the direction of learning what gets more contest points and more DX countries.

There are planty of other hams interested in other things. The 'net makes finding them easier. There are reflectors, newsgroups and email lists for all sorts of interests.

>(Personally, I'm bored after ten minutes of working any contest.)

I love contests - but I also enjoy a good ragchew, or building a new rig. To each his own.

>Working DX today is a joke with the DX packet
>clusters.

Not all of us use them.

>If your station set-up is good enough, it's like shooting fish in a
>barrel.

That's why QRP has such an avid following.

> The bottom line is that no ham I met wanted to grow beyond their own

I'm not sure what you mean, Tom. Serious question: What would I have to do to "grow beyond my own ego" in ham radio?
>
>I should point out that my original interest in amateur radio was far from
>technical. I am not a technically-inclined person. I was drawn to it because

>worked

>DX station - you don't chitchat. You exchange callsign and signal report, let
>the next guy work the station. I felt this to be boring and impersonal.

I've felt that way too, which is why I'm not much of a DXer. But much of the reason for that is things like language barriers and restrictive rules. If I want a rag chew, there are plenty of nonDX hams to chat with. And often some nonrare DX will have a real QSO.

Alright guys and TITs, all BS aside, I just acquired 2 Brand New Radios that Im willing to part with. These units are still in the Box Brand new, I took them ought to check to make sure they worked, they worked perfect. Heres the deal, They are Brand New, and I will take Offers on them for 1 Week, then they go on EBAY.

Radio Shack HTX-10 10 Meter SSB and FM Rig 25 Watts, orignal Box and all the Stuff that comes with it.
Radio Shack HTX252 2 Meter FM 25 Watts, unit also has DTMF Mic, this unit is also brand new.

I can be reached at WA8ULX@AOL.COM, as I said before these are Brand New Units, let the bidding start.You have only 1 Week then I put them on E-Bay. All BS aside, I got them at a good price, you can have a nice 10 Meter Rig or a nice 2 meter Rig for a resonable price.. After this sale I will get back to my nasty self.

Don't be put off by that dude, Carl. When you hang around here awhile you soon learn he's just a poor old
useless Goober with no life and no ham radio license, and no real interest in ham radio at all other than
to put it down as low as he thinks he can. I just pass by his rantings without opening them at all.

Anything and everything he says always degenerates to just such mushy drivel. Useless to everyone except
him, so that says where he is.

Dick

lets see i have been to the one that i got my licensed, and i have
seen a number run by various of the nearby clubs, never seen or heard
of anyone supervising them except the VE's themsleves

now it is possible for there to be curuption in the VE groups indeed
it is all but certian that is at least some such coruptiuon after al
the VE's/VEC's are made up of human beings. How much? beats me. not
enough that FCC sees any need to change it

About 11:30pm my time, W8CH and his gang and the group from 3860 got into a funny QRM-fest. They went back and forth between 3865 and 3860. Looks like this 75-meter zoo is getting more interesting. Don't get Mr. Hollingsworth involved, this is a comedy-central!

At about midnight or after, WB2CLN (Tommy tube) goes up to 3865 and tells Criss, that the group from 3860 were going to QRM him. This went on for a almost an hour, back and forth, until Criss passed out drunk on 3860.

Unless it's changed since my youngest son was in school, Texas doesn't even provide road tests any more. If the kid (or person) passes driving school (in my son's case, Driver's Educastion), they take a little piece of paper to the DOT Office and get their license. Seriously...

Which is definitely a good idea, so that the mistakes of 34 years ago
are not repeated. (See below for examples of alternatives). Note that
one of the main points of the ARRL restructuring proposal was "nobody
loses", and FCC acted on that part.

> You
> obviously have the best handle on the history of Incentive Licensing of anyone
> I know.

Thanks! That may unleash another pool-pah from one of the resident
stuppas, but no big deal. One thing that was/is frustrating, then and
now, is the large amount of misinformation circulating about the whole

issue.

> Still, as a Post Incentive-Licensing ham, I don't consider it to have
> been a bad thing. If I had been a General or Advanced at the time, I'm sure > my
> outlook would be quite different. However, I like to think that, like
> yourself, I
> would have picked myself up, dusted myself off, and gone out and taken the
> tests for Extra.

The fact of the matter is that there was widespread support for IL
back in those days, among the very hams who would lose privileges if
it were enacted. This is borne out by the comments FCC received on the
issue.

Grandfathering existing Conditional/General hams to full privs would
have created all sorts of problems. For example:

How would the FCC and the amateur community differentiate between,
say, an "old" General and a "new" General?

If the above problem were handled by giving existing
Generals/Conditionals a free upgrade to Extra or Advanced, how would
FCC deal with the ~170,000 applications that would generate?

One of FCC's biggest concerns was the technical and operational level
of already-licensed hams. How could FCC justify raising the standards
for newbies only?

End result is that the only practical solution was one set of rules
for everybody.

But FCC set themselves up for failure by making slivers of spectrum
space the main incentive, and setting up the incentive by removing
privs. Here are some alternatives they could have enacted:

1) Vanity Calls - at the time, you could get a 1x2 by having an Extra,
25 years experience, and paying a $20 fee. Not much of an incentive
for a newbie, and over time this was expanded and made less expensive.
Imagine if, from Day 1 of incentive licensing, Extras could get 1x2
calls and Advanceds could get 1x3 calls for, say, a $10 fee. OTs might
not have been motivated, but those of us pounding out 2x3s on our
J-37s would have gone for it.

2) Wider Phone Bands - The biggest gripes came from 'phone hams, and
rightly so, because they lost the most spectrum. Back in those days
the 'phone bands were narrower - 75 was only 200 kHz wide, 40 was only
100 kHz, etc. Imagine if FCC opened up, say, 3775-3800 'phone, and
corresponding parts of other bands, to Extras only (which they
eventually did anyway) but did it on Day 1.

3) More Power - The old power limit was 1 kW input. Why not allow
higher class ops more power (say 3 kW input) and/or the option of
measuring output instead of input? (FCC eventually did this anyway!)
Sure, it's not an incentive for low-power types like me, but I knew

plenty of hams who would have done whatever was necessary to get a license that let them run more power.

But FCC didn't think that way.

HAW! Somebody got the joke!

I had a By Saam moment when I wrote that. He was 3ZS/W3ZS from the
first days of licensing to his death in 1936. He's in Laurel Hill,
now. He and Maxim died within days of each other, early in 1936.

Trivia question: Where is Maxim buried? Hint: It's not anywhere near
ARRL Hq.

BBC used to send out mobile vans with directional antennas to detect unlicensed TVs and radios. They'd listen for the local oscillators. Quite effective, given the density of typical British housing. I think that in some cases they'd impound the TV and charge a hefty fine. Like what Philly is now doing to drivers without all the proper papers.

The practice was parodied in a Monty Python sketch where one of the troupe attempts to get a license for his pet cat.

> >
> >If IL was such a bummer, man, why did US hamdom grow so much faster after it
> >was enacted?
>
> That is a mystery and has nothingto do with the issue.

It has EVERYTHING to do with the issue of growth or lack of growth in amateur radio. The simple fact is that there was virtually no growth in the US ARS ranks in the '60s, and lots of growth in the '50s and '70s. Claiming that IL killed growth simply doesn't fit with the facts. If anything, the growth similarities of the '50s and '70s indicate that things like license test requirements and license classes have little effect on growth, and that we should be looking elsewhere for more important factors.

> The current
> lingering effects are why it is was a bad idea. Today we have the
> classes conousness and still have folks complaining about how they
> were ripped off by it, amoug other things.

Some hams who had Advanceds and Extras in 1953 felt they were ripped off, too. Some hams feel they were ripped off by the 2000 restructuring. Were those things bad ideas because some folks complain, even today?

Any human activity has a class structure of some kind. The best class structures exist to help and support all of the individuals, regardless of class. The idea that everyone should have equal rights does not mean everyone is guaranteed equal results.

Some folks seem to think that the ~15 years between "old" and "new" incentive licensing were a sort of Golden Age of Universal Ham Equality, but in fact it was not like that. 'Phone vs. CW, SSB vs. AM, transceiver vs. separates, DX/contest vs. ragchew, Conditional vs. General, Collins vs. Drake vs. everything else. Nothing new under the sun in that area.

> Have you ever said qualility over quainity?

Nope.

I may have written "quality over quantity", but google comes up blank on it.

Is quality over quantity a bad thing? Or would you prefer the world of Harrison Bergeron?

--

Here's the main policy question to consider: If/when the code test disappears from US ARS license testing, what other practical changes should be done to the license structure and test requirements to best serve the ARS? ("Practical changes" means things that FCC might actually do, rather than things we'd like but FCC will not do).

>Without Titles, Rank, Class, Callsign "approved" or
> "authorized" by the government, the unlicensed radio services
> aren't attractive to those needing self-glorification.

What, Oh Licenseless One, can someone do in the "unlicensed" services that I can't do in the Amateur Service, only better and LEGALLY...?!?!

My "title" of Amateur Extra Class Operator is shared by thousands of others, and grants me nearly unlimited access to the ether.

My "title" as an Amateur Licensee grants me that which eludes you...permission to operate a radio station without further adieu. Except for your tour in teh Army as a radio station clerk, you have never been a radio OPERATOR, and even that period of time is dubious at best.

At no time in your "career" did you EVER have the unfettered access to so much electromagnetic spectrum as some prepubescent Amateur licensees have today. Your commercial license allowed you to operate someone else's transmitter on whatever discreet channels that his or her station license allowed you to emit RF on...Never at your "whim" or discretion. Too bad for you.

>Some radio amateurs are too focussed on emotional-ego
> aspects of their hobby activity and cannot handle the term
> "amateur" even though that is also a regulatory term meaning
> no pecuniary interest.

At least some of us have the opportunity to be concerned about it. That's one "worry" you don't have, eh Lennie?

>They want to think of themselves as...(SNIP)

Whew, Lennie! What an imagination! You have a grand total of six or seven people you ahve cited by name and callsign as Amateur "friends" or acquaintences, yet you feel you have sufficient experience in matters of practical Amateur practice to make such a demeaning and denigrating slur.

What a PUTZ!

>Those who take up amateur radio avocationally, as just a
> hobby, a fun thing to do in their spare time, are regarded as
> "second-class" and probably not fit to cohabit the planet with
> these self-defined Seekers.

Who told you THIS? From what scientifically conducted poll did you come to this conclusion? Or are you man enough to admit that this is just YOUR opinion, which when combines with $2.50 can buy you an overpriced cup of coffee at Starbucks...?!?!

Well...You've slid back into Putziness. You were doing pretty good, even insightful...You're LENNIE again!

>Do you really think you will get a list, or any sort of logical
>response to that request?

No Jim, I didn't expect a(n) (honest) reply. However the question is out there, and Lennie can duck and hide all he wants, but his failure to answer the questions says more than any spin he could add.

>Actually, it was taken away long before that point. When FCC went to
>all-multiple-choice, it became possible to pass the written exams
>without demonstrating comprehension. That was about 1960-61.

I dunno! I tested (Novice) in 72 and I had to do some thinking! Had to do some math, too! And I did a lot more when I moved up in 75.

>> As pointed out above, you have forgotten the other option...The child
>> memorized enough of the questions from rote memorization to be able
>> to "answer" the questions. This is NOT cheating under present FCC/VEC
>rules
>> as long as the
>> applicant does not use said "study guide" during the test itself.
>
>Another BFOO. But some folks just don't get it, Steve

I know...And I hate having to restate the obvious, but when you have a persistent propagandist like Lennie trying to denigrate and demean with his assinine flailings, you have to constantly keep your guard up.

>> I'd rather see 10,000 under-12 licensees than ONE of
>> them out playing with drugs, illegal guns or premarital sex.
>
>YES!! If ham radio keeps even a few kids out of those problems, or
>even diminishes their appeal, that's a VERY GOOD THING.

I am sure they are out there, but so far my experience has been that kids who devote enough energy to doing something as relatively easy as pass an Amateur license generally don't get into thos kind of problems...

>Do you see ANY examples of problems in the ARS being caused by the
>licensing of young children who pass the required tests? I don't, and
>those challenged to provide examples have none. That's the most
>important fact.

Lennie still has yet to present whatever child-rearing experiences he has,
or what practical experience in child development he has experienced.

>Now do you understand what inspires those completely-unsubstantiated
>allegations, Steve? And why you'll never get any evidence of the
>allegations, just more trolls from the accuser?

I agree. And my publically asking the questions directly of the accuser
is my way of keeping his trolling apparent. he DOES have the skill of masking
the troll. Best it be kept aired out.

>I'm not bitter. Its just that Ham radio is not what I expected it to be.

Yes, you are bitter. If you weren't, you would have just laid down your Amateur gear and license and moved on to some other pursuit. You haven't. You feel compelled to sit in here, anonymous at first, making snide, often rude allegations and insinuations of how bad Amateur Radio in general and Amateur Radio Operators in particular are.

THAT is bitter.

>I have given constructive ideas. I made a list of some 20+ ways for better
>amateur radio (in the 7 steps to improve Ham Radio).

And most of those items I rebutted to you as being already part and parcel of Amateur Radio. You simply ignore the obvious.

>Okay, some of the items were not useful or just insensitive.

MOST were not useful and "insensitive" is a fair adjective.

>I even had a few members join my type of radio club. However, I did not have

The computer is a integral part of a ham setup these days. no question.
A person can operate on paper and can operate without a computer, but
that is rapidly becoming the exception, and is an anachronism in any event.

In my own case, I gotta have it, because I run mostly psk31.

Corollary? Jim didn't write a corollary. Not even metaphor, simile, allegory, nor analogy. Just a bit of plain old folk wisdom.

If you're going to flash your badge at others for their grasp of the language, then yours should be impeccable. You couldn't spell 'corollary' and your usage of the word betrays the fact that you do not understand its meaning.

Turn in your badge.

Herb Schoenbohm returns to ham radio (Dec 4, 2002) -- After nearly two years off the air, Herb Schoenbohm, ex-KV4FZ, has made good on his promise to one day return to the Amateur Radio ranks. The FCC on December 4 issued Schoenbohm a new call sign, NP2MJ, as a General-class licensee and was expected to act quickly on his Amateur Extra-class application. In 1994, the FCC put Schoenbohm's renewal application for KV4FZ up for hearing following his 1992 felony conviction on federal fraud charges. The Commission finally turned down his renewal application in 1998, the US Appeals Court upheld the FCC's decision in 2000, and the US Supreme Court declined to hear the case later that same year. After losing his renewal bid, Schoenbohm applied for a new license in 2001, first passing the General and then the Extra exams. The FCC subsequently designated Schoenbohm's General application for hearing on the basis of character issues stemming from his 1992 conviction as well as his alleged lack of candor during subsequent FCC hearings on the matter. Following a hearing last spring, Administrative Law Judge Arthur I. Steinberg in October cleared the way for Schoenbohm's return to ham radio by declaring that Schoenbohm appeared rehabilitated and qualified to again become a Commission licensee. Schoenbohm has said he may apply for KV4FZ as a vanity call sign.

---------- cut -------------

I DON'T KNOW ABOUT YOU GUYS, BUT I CAN'T WAIT
TILL HERB GETS BACK ON 14.300 AND EXPOSES THE
MARITIME NETS CONTINUED AND NEW VIOLATIONS OF
PART 97.113

WELCOME BACK HERB SCHOENBOHM TO HAM RADIO !!!!!!!!!!!!!!!!!!!

It went on till 1:45 AM when Chris finally
passed out "drunk-as-a-skunk-three-sheets-
to-the-wind" in his radio room.

What was all the fuss about CLN and "Chicken Feathers"
however. I heard this late-on and there seemed to be a
complete disentegration of the Motley Group as a fallout
from all of this. What happened???

Truly it was a 5-star evening of radio mayhem on 75 meters.
Was almost as good as the days of the classic 14.313/14.300
net wars.

Will there be a repeat tonight? I just gotta set the VCR Audio
Record Line Channel to SLP this evening with a T-160 Tape
in it on 65 just like I used to do with the Art Bell Show !!

While thebook is categorized as fiction, much of it is not fiction at
all. You know what happened to Cortlandt Street, of course.

You both might also like "Calling CQ", which can be downloaded from
N9AVG's website.

Looks good - hmmm, perhaps some stockings around here need stuffing.

--

Just last night I was reading a 1953 QST, and there was a picture of a
7 year old girl who had just passed her Novice test. She was waiting
for the license to arrive. Story said she would enter third grade in
the fall of '53. This was in the days when people who lived where she
did had to take all tests at the FCC office, even the Novice. (This
changed in '54).

WAY COOL!!!

The site says it's a TRUE story, not fiction, and that the young ham
was 10 years old. The rescue happened in 1923. Should be pretty easy
to verify from historical accounts of the day.

73 de Jim, N2EY

The things I am concerned about with kids are dumb stuff like chewing
on antennas, Picking on the family pets with the ht antennas (a cat
finds a rubber ducky antenna irresistible, and it might be fun to see
what happens if we key the thing up. Kids can do the darndest things.

But your point is well taken.

>
> But isn't it a double standard to hold a child to a different level of
> performance than an adult, based solely on age?

<rant on>

Don't care. Anyone I would coach would know the material when they are
done.

This whole "test" mentality is ingrained in our culture and has been as
long as I know. It's like that in the school system. My kid has a big
thick book with "sample" SAT tests at home.

Don't care. I think that memorizing answers is a low level form of
cheating. People have done it as least as long as I have been around,
so I suspect they did it before that. But it's the entire system that is
that way, and if people do that, then okay, they are allowed to. Mostly
they cheat themselves out of knowledge. Maybe they don't want knowledge.
how does knowledge help you watch Survivor or Jackass - The Movie?
Modern US culture doesn't reward knowledge- it rewards sitting on ones
duff and being entertained.

<a big Homer Simpson like> Booooriiinnng!

I don't blame the FCC any more than I blame the school system or politics or whatever. The material is there, you can learn it or not. The question pools don't bother me, they are just a method of letting you know what is on the test. They could just as well make a book that has all the material in it, and you just read and "memorize" the book. All covered in depth. Thing is, some people will just go through and mark all the things they consider relevant with a hilight pen. Some people won't like that either. After all there are the answers!

Don't care. Fact is, we can't regulate other's behavior. I will learn the material, and anyone who wants to tutor under me will learn the material. But if someone wants to do it otherwise, they are welcome to cheat themselves.

<rant off>

> Funny thing is, most of the newbies I encounter really want to learn
> the material.

There are some weirdos like that around! 8^) I suspect that a lot of people DO want to know what is going on. Maybe the 80 meter ragchewers don't, maybe the repeater rats don't, but most of the crowd I hang with do. But even among the pariahs, I suspect that many are knowledgeable, after all even an old dude with kidney stones can know about electronics. 8^)

Hold on a sec there....

"because the gov't. obviously should not endorse or legislate a hobby"

Why not? It's not obvious to me at all.

Doesn't matter if an activity is a hobby, service, business, vocation,
avocation, or some other name. If the activity uses a limited, shared
public resource, and/or is involved with the safety of third parties
and their property, it's definitely within the gov't.'s purview to
regulate that activity. "Endorse" and "legislate" come under
"regulate", I think.

Ed Armstrong was a major in the US Army Signal Corps in 1918, stationed in Paris, when he filed for the patent on the superheterodyne. Hardly a "fourteen-year-old!" :-)

Perhaps he needed (as Heil and Carroll claim/imply) that he had to have "permission from the ARRL DX bureau" in WRITING to "get on the air?" :-) :-) :-) :-)

The Sarnoff kid was a junior morse operator at some NYC radio comm station owned by OTHERS when he worked some Titanic rescue emergency traffic in 1912. He would eventually grow up and head up the new RCA Corporation forged out of a GE division...and be the subject of hatred and thievery on radio patents allegedly stolen from Armstrong and others according to someone's past posting in here. :-)

So...how come Elecraft doesn't show a Miccolis as the designer of the K2? ["I only operate ham gear that I DESIGNED and built myself"- Mr. N2EY]

More likely, the FCC doesn't consider amateur radio as any
"vital, important 'service' to the nation." Horrors! :-)

ALL US radio operator license testing has become privatized.
COLEMS were allowed to administer commercial tests at the
same time that VECs were allowed to administer amateur
radio tests. By implication it would seem that the FCC doesn't
think that radio operator licenses are high on their list for tools
to regulate all US civil radio.

>I really am beginning to wonder if there isn't some bit of insecurity on
>behalf of folks who just don't want to believe kids can master the material
>enough to pass a test for amateur radio.

You are free to believe what you want. However, the "insecurity"
charge is rather artificial to those who have a need to win
message points. :-)

If you wish to use that as a claim that six-year-olds are as
responsible as adults in legally operating a radio transmitter
in the EM spectrum that can reach around to the other side of
the earth, legally so alone and without any adult supervision,
then I'm wondering what exactly are you talking about...?

No one has defined "kids" chronologically in here. Was anyone
(including readers who don't post) ever licensed at age four?
Age three? Age two? By strict legal non-definition of age, VEs
could "pass" infants for FCC-granted amateur licenses.

>Unless it's changed since my youngest son was in school, Texas doesn't even
>provide road tests any more. If the kid (or person) passes driving school
>(in my son's case, Driver's Educastion), they take a little piece of paper
>to the DOT Office and get their license. Seriously...

Whenever VEs in any state do testing for motor vehicle licenses,
that becomes relevant to amateur radio policy discussions.

Dickiebird hypocritically twitters again...he just "passes by the
"rantings" while his cuckoo bird imitations QRM the newsgroup.
:-)

>Anything and everything he says always degenerates to just such mushy drivel.
>Useless to everyone except him, so that says where he is.

I'm in Southern California where the predicted high temperature
today is 74 F and clear skies for Los Angeles.

No mushy drivel cascading down from any New Madrid fault line.
Or even from an Old Madrid fault line.

Of course, that leaves everyone here at a disadvantage...hardly
any possibility of trudging barefoot (uphill both ways) through the
snow to any Nobel-laureate-category amateur radio test session!

Tweet, tweet...

I agree, but that is not "endorsed" in here...all things must
remain as they were in the beginning when all these radio
"experts" became licensed. They define amateur radio as
"working DX on HF with CW."

Not only that, all must trudge miles barefoot through the
snow, uphill both ways, to take an "official" amateur test
which is the equivalent of an academic PhD grant. These
mighty radio experts have said so...in WRITING! :-)

"Endorse" and "legislate" come under >"regulate", I think.

Legislation of laws enables regulatory powers by an agency.

The second dictionary definition of endorsement is to "support, sanction, approve" something. ARRL endorses US amateur radio but it doesn't regulate it. Individuals in the US ARS endorse amateur radio but do not regulate it...despite what some of them claim...

Subject: Re: W3TIT?

I brought that up with Wireless, the Bureau that does the licensing; and
asked
why the heck they'd let it through. Their answer was that it they started
screening, there'd be no end to having to block certain call signs. My
answer
is baloney, state hiway departments do it every day with vanity plates. You
sure wouldn't see that on a license plate. It's in very poor taste and I
hate
to see it in the Amateur service. Image is everything, in a service that
uses
billions of dollars of spectrum for free, and Amateurs are going to lose if
they doesn't remain aware of that. Call signs such as that don't help.

So you're ready to cash in your (formerly) seven figure 401K and distribute it EVENLY to every needy soul in ham radio that you can find in order to equalize things? Or do you prefer to remain a member of the financial elite CLASS? There's really no difference, ya know. Your world class high$ ham radio station only proves the case. You run whatever you wish in the way of expensive gear instead of yesterday's castoffs. If that's not the action of one of the elite class what could it possibly be? Act otherwise as you wish, but the truth is there.

Dick

Shows what you know. Most people taking that or any test mainly want to pass the test. Some will be glad to learn whatever piques them sooner or later, some not, but all have as their immediate goal making a passing score.

> > So now I'm curious Steve, who is monitoring the VEs at an exam session?
>
> Wow! Silence from Steve.

As a longtime VE I will be glad to answer that. VE's monitor each other, and for certain the VEC whom they
send all the paperwork to monitors each and everything they did. You would probably be very surprised what the
VEC can learn about the test session in general and the handling of each applicant in particular by
conducting his review of the exam session, which he does EVERY TIME.
Does all that guarantee there will never be a problem? No, nor did testing by the FCC. But you may have
noticed that most apparent problems with tests by VE's are reported to the FCC by the VEC himself.

Big F'ing deal! The Better Amatuer Radio Federation can still be achievd!

It's for White Nationalists. No jews, no blacks, etc.

We dont need Herb to have a ham club!

And we wont call no-code techs "CB-plussers" either!

>Never had to. Good thing. Were you ever able to?

Totally irrelevant what any one person can or can't do. Laws and regulations are never made that way. Do not fall into the trap of personalizing an issue.

On-off keying codings have become obsolete, defunct for all commercial, government, military communications. Denial looks foolish when long-time amateurs keep insisting on that singular skill's "importance" or "necessity."

The FCC does NOT demand in any way that US radio amateurs use one mode allocated over another. All US radio amateurs have the option to use any allocated mode, any band, any class. The FCC has stated for a dozen years that tested morse code skill does not have any relevance to their task of regulating amateurs through licensing.

If you wish to "challenge" anyone, then challenge the FCC commissioners and their staffers making the regulations that you must obey in amateur radio to remain legal. Ask them "if and when they ever learned morse code."

Good luck on this one...

Beats me, maybe a few far-end OTs don't have 'puters. In five years
most all of the mob will be using LCDs, not CRTs.

> It's getting to the point that most hams who do any half-serious
> contesting, homebrewing or dxing have a dedicated shack computer.

In the past 6-8 years 'puters have all but reveloutionized the hobby
from top to bottom and it goes far beyond just contest CAT control &
logging. However the things have also revolutionized the workplace and
just about everything else, we ain't alone at all. My 'puter has
changed the way I work out in the smokestacks much more than it has
impacted my ham activities.

The big experiment in this year's WW CW was trial runs of a club
SpiderNet team for spots vs. packet. Filtered full-time high-speed
connections to the Web straight to the logger. Worked. Minus some
easily corrected filter & config glitches.

> First all solid state legal limit HF ham amp I ever saw was cover
> story of QST. April, 1976. Expensive monster, but I figgered 3-500Zs
> would soon be worthless. More'n a quarter century and they're still
> expensive.

They're not free but at $150/pair they're only $30/pair more expensive
than they were 25 years ago - without factoring in the adjusted
dollars. Huge bargain no matter how ya cut it, no way can ya beat 'em
at the 1 Kw input level per jug on any realistic basis.

> > Point is that the option does exist, we takes 'em or we don't, the
> > technology isn't the problem.
>
> Bingo. And it's not just technology that drives the ham market.

The technology is only one little corner of the hobby and in most
cases the avearge ham only gets into it when it's time to go out and
buy a radio. And even then only sometimes.

> > > That's you. Most hams will diddle a few knobs to get the suds.

>
> 'zactly the point.

Which is not to say I wouldn't unload a tube amp and jump all over a
solid state amp if the deal was attractive. I poked around a bit more
over the past couple days and it turns out that they're a lot more
cost competitive than I thought, the ratio is more like 1.5:1. Which
with auto band switching, no tubes with finite lives and much less
noise they come up pretty competitive.

> > Imagine Brainiac loose wih a Henry 3K or an

> could any of us lowly hams dare to argue with that?

'Twas the DeLorean of solid state HF rcvrs period. It's been
demonstrated many times that the Pentagon will buy radios hams
wouldn't touch with a ten foot pole. Military gear has to be
idiotproof and built like a cinderblock and not much else. They take
operator skill outta the equation which is the huge difference between
ham ops and military ops. Toss a 100w ham xcvr at the average Signal
Corps grunt in some far off place and tell him to build and hang an
antenna then call home with it and/or establish direct two-way HF
comms with ten countries . . .

> > > Not just that. Their applications evolved. Note how the use of active mixers in

>
> But - but - it's DSP! It's gotta be "better" - the PROFESSIONALS IN
> RADIO told us so! How dare we hams question their pronouncements?

Horsepucky.

40-bit extended floating-point processor, 18-bit over-sampling A/D
converter, 16-bit D/A converter. Lotta DSP.

A pox on it and them when it comes to hamming with it, especially cw.

Considering all the gelt I poured into the thing I expected it to be a
decent cw rcvr along with being a decent swl rcvr. It AIN'T even a
half-decent cw rcvr. Crank in the 50 Hz (yeah, fifty HERTZ) DSP
"filter" and ya get a weenie little spike maybe a few dB high then the
skirts flare out like the wings of a J-3 Cub . . The goofy old Heath
Q-Multiplier I wired into to my goofy old HQ-129 did a better job in
1960 fer cripes sake.

The AARL lab ran and archived an extensive review of the 545 but
nowhere in that review did they "happen" to get much into this "little
detail". They musta "run outta bandwidth" in QST . . Dump in the
review and check me. It's OK on ssb but no killer. All JRC had to do
to make it a huge winner on all counts was to make provisions for
adding a few optional plug-in ssb & cw analog filters. They didn't do
that. "It's 100% DSP!" Back to the pox.

But it's beyond superb for AM which is the real purpose of the 545 and it's probably the pace-setter in that game, I've never tuned a better swl radio and I've tuned slews of 'em. You'd have to hear it when I bring up a weak, buried AM BC signal to believe it. Has a front end as good as the K2 and the MP.

I don't regret buying the thing at all because I do a lotta SWLing. In the end it's a no-counter for ham ops anyway, separate rcvrs went out with tubes.

Re: Great Buy For CBplussers and Real Hams

This is not a policy issue. You start by insulting the buyer (calling them a CBplusser) and then they should buy from you because it may be a great deal?

You should put in the ebay ad. "This equipment is good for both CB plussers and "real" Hams. I do not like non-Morse code using CBplussers. However, I am even willing to sell to CBplussers."

This would be a more honest ad.

At any VE session there is always a minumum of three examiners. Often there
are more. Most VEs value their licenses and would not stoop to dishonesty.
If they see other VEs doing so, they will report them so as not to
jeapordize their own licenses and credentials. That is why there must be at
least 3 VEs present.

Hansl (sic),

I am totally ignorant of military radio operations and how that all works in the *post*-WWII military (I *do* happen to know a very little bit about WWII-era radio ops, being that my father was in the military in WWII- though not a radio operator- and he counted a couple of communications guys as close friends), can you briefly describe to me how and why a recruit would become a radio operator in the US military- pick your favorite branch- and what they'd do on an average (read: non-wartime) day insofar as their duties are concerned?

I hope I didn't make my request sound egregiously difficult. I am just curious to know what kinds of duties would constitute the daily routine of a modern day military radio operator. I have NO illusions whatsover about comparisons of these military ops to amateur ops either. I'm just curious, that's all.

MARKIE! You finally saved up enough money for that $5.00/ISP, or

did you
finally get your discharge from the U.S.Army Chemical Corps and find a

REAL
job...?!?!

stevie i know this is hard you to understand, at the time i refering
to a 5/hr ips that was the case, these days i have another choice, in
this case an ISP that is to me free, in large part becuase I am
involed in crateing a local option. given that you seem likely to
change you socks more often than think any thought i can understand

the confusion

>>> VEC test sessions are NOT monitored by anyone else DURING
>>> testing.
>>
>> Wrong.
>
>Really who does

Other VE's...that's who. How do you think some of these
"audited"
sessions are audited, Markie?

which my statement was and remianins correct since the VE's are the
VE's if the VE monitor themselves then they are monitored by anyone
else.

>now it is possible for there to be curuption...(SNIP)

Geezis, Markie...You STILL haven't gotten a spellchecker, have
you?

nope i haven't so what

>How much? beats me. not
>enough that FCC sees any need to change it

However they DO expect that we will audit and self-police
ourselves. This
is glaringly apparent from the number of reports in QST, CQ, etc, of
audits and
investigations of apparently questionable VE sessions.

yeah and your point is. obivoiously the FCC is basicaly satisfied as
the level of corportion but the VE's are not monittored by anyone over
than themselves. an inperfect system but most are such as democracy,
but it works well enough for the need, (ARS licensing)

How do YOU think they did it, Markie? Pin some names of VE's on
a
dart
board and let the snap of the wrist decide who get's investigated?

i believe some of those are random, some are based on complaints and
someare based on questioned resaied by the VEC's that over see their
own VE teams

What "point?" 49 years and 10 months ago I was QSYing
15 KW Press Wireless transmitters on HF. Lots of knobs,
dials, meters, manual changing of shorting bars on its final
tank coil. Isn't that what you used to like (according to past
messages in here)?

>Depends on yer sense of humor. I happen to enjoy watching The Putz
>thrash for attention & relevance on those few occasions when I bother

Tsk, tsk, tsk...SOMEONE has to correct your technology
inadequacy.

>What the hell is this "SIGNARS" crappola he's locked onto??

"Crappola?" Go over to ITT in Fort Wayne and tell them it's
"crappola." 241,000+ built and 239,000+ fielded to the US
military as THE small-unit manpack, vehicle, and aviation
radio.

The name is SINCGARS for SINgle Channel Ground Air
Radio System. It's been around for 14 years now.

Nice troll, ignoramus. It worked. Do you also go trolling
around iceholes?

>... It's been
>demonstrated many times that the Pentagon will buy radios hams

>Corps grunt in some far off place and tell him to build and hang an
>antenna then call home with it and/or establish direct two-way HF
>comms with ten countries . . .

US military radios aren't designed or built for amateurs to have
wallpaper contests or bragging material at NCO and O-Club bars.

Since before WW2, US Signal Corps radios had antennas that
were integral with the radio itself or packed with it.

If "field expedient" antennas are needed, their construction has
been taught at Signal schools for 39 years. If you need a link to
them in order to make your own antenna, just go to the Fort
Gordon website and search. Or, you can see the same thing in
a book on NVIS techiques...material lifted right out of US
government FMs (no copyright restrictions on US government
published work).

Did you move to Missouri to live next to the dickiebird?

Have you learned how to use all the controls yet? You sound just
like the dickiebird when he was pissing and moaning all about the
"worthless" outboard DSP unit he bought once. Tsk, tsk, tsk.

:-)

>I don't regret buying the thing at all because I do a lotta SWLing.

Of course you do... :-)

Gosh, senior, you ought to do the patriot thing and volunteer all
your smarts to the US military. I'll bet you could really show
those "putzes" at Monmouth what REAL radio is! Yeah, like
using only 100 W to "call home" or "work the world" ANY TIME
they felt like it! Tell them that you are an OF extra amateur
who knows far more than those engineer pukes...tell them you
can expand their patent numbers twenty-six times!

Okay, Googie, how do you get 5 PPM in a TCXO, hmm?
Shout loud at it, call it names? Show it your bank account?

I, uh, kinda think that's what I was saying, Jim. The gov't. is constrained
to call ham, CB, FRS, etc., a service--*because* it is not in the business
of endorsing or legislating a hobby. And, because of the very reasons you
state, amateur radio--and other radio hobbies, are noted as services by the
gov't. We, out here in the real world, may also see amateur radio as a
hobby.

And the Bureau and Riley both have a point. On the side of Constitutionality, I'd err on the side of the Bureau. Though, I have heard of some callsigns "they" will not issue. I'm not so sure about Riley's statement that "you sure wouldn't see that on a license plate." I've never applied for my callsign on a license plate--but I'll certainly y'all know what happens if and when I do. It'd be my guess I'll post the picture of my plates on a website. But, maybe Riley's right.

Well, once again, no less an authority than K4ZDH condemns a demeaning, sexually-suggestive amateur Vanity call sign, and indeed, cited the very reasons I've used in my arguments with our own resident offender, W5TIT. And the ARS is again taken "one step closer to extinction."

This website might satisfy your curiosity about the US Army
radio operations of today - http://www.goarmy.com/jobs/

If you search under "science: engineering and technical" you
will turn up many different MOSs (Military Occupation Specialties)
involving radio and electronics. The 31x MOSs directly involve
Army land radio operations somewhat similar to what was done
50 years ago.

To see US Army Signal equipment in a single comprehensive
descriptive public document (Field Manual 24-24, 29 Dec 94),

go to the website - http://155.217.58.58/atdls.htm also known as the General Dennis J. Reimer Training and Doctrine Digital Library. Click on the "Library" button, then click on the title "Official Department Publications" in underlined and in blue That opens up the Library itself. If you select "Field Manuals" on the left and "Signal" on the right, then click the button underneath you will get a listing of "FMs"or Field Manuals for signal doctrine. FM 24-24 has the "catalog" of equipment. Some of the other available documents may be of interest.

The US Army Signal Center is at Fort Gordon, GA, the main Army signal school. A search or link will take you to the Signal Museum on-post with some of its contents on-line. An extended link can take you to Signal, the Army news-letter for signal personnel with many past issues available for viewing.

Fort Monmouth, NJ, had been a Signal School (in my time, having trained there in 1952) but is now CENCOM or Central Electronics Command for planning and contractor interface. Not very informative for "lay" people, only to manufacturers.

The Fort Huachuca, AZ, website is mainly for Military Intelligence and its schools which include radio monitoring and UAV (Unmanned Aerial Vehicle) training. They have a good on-line history section of military intel people and some civilians who worked with the US military.

Military communications of today and even a dozen years ago (at the start of the Gulf War) are FAR removed from what it was 50 years ago...except for the non-signal-specialist communicators carrying one of the quarter-million AN/PRC-119 family radios in small-unit land operations in all "line" units.

It is the same with the US Navy and the US Air Force, although they don't quite have as much information on-line...yet. Give them time. What the US military has in the way of communications and electronics is exciting and rewarding for those who enter into it. The equipment is, in the view of professionals, first-rate and may very well be the best in the world. It's NOT on an amateur scale by any means...

Leonard H. Anderson
Army Serial Number RA16408336 (1952-1960)
MOS 281.6, somewhat equivalent to today's MOS 31P

Gee, Kim, d'ya think? And if so, what do you intend to do about it? Would
you actually do the right thing and change your call, or are you going to
continue to take the ARS "...one step closer to extinction" ? As I've stated
before, I believe you have it in you to do the right thing.

BTW, I checked qrz.com, and W3TIT apparently wasn't issued, or just
hasn't showed up on the database yet. It will be interesting to see what
happens.

3106. RRAP Intro to Markie Morgan

Newsgroup: rec.radio.amateur.policy
Date: 2002-12-06 08:13:40 UTC
From: k4yz@aol.com
Message-ID: <20021206031340.21143.00009515@mb-fx.aol.com>
Source record: 57296

For those of you who have "joined" RRAP in the last 12 or so months, I'd like to take this moment and introduce you to Mark C. Morgan, KB9RQZ.

Mark is a unique person. He is obviously very passionate over the "Morse Code test" issue, however the ends to his means are even MORE unique.

When I first entered into this forum, Markie decided that becasue of my retired enlisted U. S. Marine Corps status he could "scare" me into not responding to his posts by insisting that he is a commissioned officer in the United States Army Reserve "chemical corps".

He initially stated that he was a "lieutenant colonel", but then later backed off and "admitted" he was "only" a lieutenant.

Fortunately for me, Markie is almost as ignorant as he is functionally illiterate because 30 minutes on the phone proved that he never served in ANY branch of the Armed Forces, enlisted or commissioned, Reserve, Active OR National Guard. His story then compounded as he insisted that he was "drafted", and that he was being held in reserve duty due to the sensitivity of his duties.

The REALLY colorful part is the part where he states that he is a gay pagan, and that he is kept on active duty anyway, his "CO" having waived the "don't tell don't ask" policy of the Department of Defense just for him.

Later succumbing to his own paranoia, Markie then went on a tirade about being "stalked" by his violent ex-wife who is seeking child support, and that his current "name" is an alias, and none of my findings with the defense personnel agency was valid since he never served under THIS name.

He also insists that the FBI and Secret Service said it was "OK" for him to commit a felony (impersonating a commisioned officer of the Armed Forces) in order to put me and his ex-wife off his trail.

Oh yes...About the "drafted" part....Anyone who is knowlegeable on such matters knows that the last draftees who did not voluntarily re-enist or extend their commissions were mustered out in 1974 or 75. The last one's were inducted in 1972 or 73, which would make Mark only EIGHT years old when he was "commissioned". Markie has yet to explain how this happened.

Furthermore, he later went on to claim that I had stalked him at his residence, taking my comments to "take my best shot" at him in this forum as a threat on his life. A lawyer in his home county was retained and Markie was advised that he was about to find out what civil penalties could be brought against him for such allegations. Seems he got the hint, but maybe he needs to be reminded.

So...it's been a pleasant year as the Illiterate Drafted Gay Pagan Lieutenant of the United States Army Chemical Corps Reserve took a break from this forum, depriving us of his fractured and ill-prepared drivvel, but I guess the "bad penny" is always going to turn up when you least expect it.

For those who care to try an engage Mark in any posts, please not that he has publicly stated that he ahs been told by federal agencies that it's OK for him to lie or mislead ANY person for any reason, and that he will do so at liberty.

A search of "konstans", "konstans@oneleven.net", "mwmorgan@yahoo.com", "kb9rqz@yahoo.com" and others will reveal a plethora of humourous, even entertaining, rants, tirades and blatant lies promulgated by what must be Amateur Radio's most assinine jester of the century.

Welcome back, Markie.

Thanks, Dick.

Brian, you're in the killfile, along with ULX and a couple others. I only see your stuff when echoed by someone else. If you'd care to get an immediate response from me on any matter, e mail it. There's already too much senseless garbage in this forum for me to unmask you, and with Markie's return, I dare say it's about to be compounded.

There are huge variations in applying 'puters to ham radio. On one
hand there are those who simply yak the machines in which case they
usually could care less about getting a computer involved. The other
side of the coin are the dx contesters who are *required* to submit
their logs as computer files.

So the original radio amateurs were unlicensed? No Morse Code exams?

Dick, I'm so glad that aninsider answered that questioned.

So VE's monitor each other, then some guy gets a package in the mail monitors the VE's. Wow.

We could cut prison costs if we let the inmates take turns guarding the prison.

Then the Warden could read about it in a monthly reoprt, verifying that it is legitimate by the postmark on the envelope.

Perhaps I'll fly that suggestion by the Dept. of Justice.

Though Bruce is all of that, you haven't addressed his claim that he
could have passed the Extra when he was 4 years old, which included a
20WPM code exam that he couldn't pass at any age.

Yet you don't let go of the fact that I didn't passed the 20wpm,
though I did pass the written as stated.

That is the double standard I refer to.

The following e-mail was posted on r.r.amateur.misc yesterday by Hans K0HB.

This has to be the ultimate rejection letter ever! Herb basically didn't even
acknowledge our resident moron Lloyd Davies.

Tubby is probably considering slitting his wrists and/or getting professional
counseling.

This is like getting the best Christmas present ever!

Imagine that, Lloyd Davies was a pretender all these years. And, a self
appointed one at that.

Firebottle

Lloyd,

I forwarded your message to my friend NP2MJ. He responded, saying....

Hans,

I plan not to get suckered in to any radio wars. My principle interest is 160 meters and chasing some new ones when they show. I probably won't have much up until next year. I have so busy with my regular government job, 6 radio station where I have engineering responsibilities, a well as still participating in the local Republican party leadership.

Let them have their fun. I am going to find enjoyment elsewhere.

73

Herb NP2MJ

In other words, BARF is not on his Christmas list.

With all kind wishes, <chuckle, smirk>

de Hans, K0HB

You asked for paperwork. I have none. All I have is my "story."

Since you're the only one who ventured forth as a VE expert in another
thread, tell us if Volunteer Examiners maintain paperwork. At least
Bruce has that (maybe).

So when Bruce was 4 years old and there were 20wpm code exams required for Extra, and Bruce cannot pass a 20wpm code exam at any age, how is it that he can claim to be Extra at 4 without a code exam, but when I passed the Extra written exam in 1994 or 1995, without the code, everyone comes on here correcting me that I only passed "a part of the exam."

So which is it? Could he be an Extra in the golden days of inventive licensing without passing a 20wpm code exam? (minus waivers long after Bruce was 4)

Good luck on this one.

You said that long distance communications are commonplace and no
longer impress folks looking at amateur radio from the outside. It
doesn't attract people the way it did in the golden days of inventive
licensing.

Today, Morse code just makes it more so. What is wrong with saying
that?

I dunno about the PhD grant, but they've said all the other.

Having been trained in land surveying, cartography, GIS,
geomorphology, etc, I'm still looking for that "uphill both ways"
paradox.

That's very typical of your logic and the "power" of your thinking process.
So go ahead and give 'em a laff, pass it on.

Hmmm, looks to me like that's exactly what Bruce has! You're saying we should just accept your story
and no one else's. Got it.

>
> Since you're the only one who ventured forth as a VE expert in another
> thread,

You always have to twist others' statements to assert they said things they didn't say. Nowhere do I
claim to be an expert on anything. I know you claim that, but can't seem to support it with anything
but your "story". Don't attribute that to others.

> tell us if Volunteer Examiners maintain paperwork.

I always maintained extensive paperwork files on everything I did as a VE. I don't see how one can
properly do the job without it.

Good luck yourself. You're really concerned about Bruce's claims. I'm not, nor with yours.

To most hams it's obvious. Ham radio is not for the masses, and never was.

Yes! For instance, Hamscope, which I am trying out now, has a number of macros for repetitive functtions such as CQ'ing, answering a CQ, and things like equipment bragfiles.

Say someone is calling CQ. You highlight their callsign in the recieve text window and double click on it. This tells the computer who you want to reply to. Then when they stop transmitting, you click on the "call" button, and your rig starts transmitting <theircall> de <yourcall>. Their are similar macros for tings like BTU, end of QSO, etc. You can also modify macros for your individual purposes, such as multiple callsign, QTH, etc for the occasional weak QSO. I'll use the macros to start, then drop to live typing if we're going to chat a while.

And when that happens, don't worry about being a slow typist. It's not like CW where the listener can sometimes have trouble with a slow sender. It's all in the screen , which acts as a buffer.

Great thing is, you can correct spelling misteaks too!

I think I would too. I love twiddling knobs. That's why I bought an IC745 for my first rig. 38 knobs and switches! Just what is needed to keep me happy.

Nothing wrong with that, either. He can take his own ball and go home.

But if somebody wants others to play, there has to be some common
ground on what the game is. And the games go on, with or without Vhsah
$ company.
>

Go back Dick! It's a trap!

Let's say some entity is monitoring the VE's to be sure they are
complying. Then who monitors the monitors. And who monitors the monitor
monitors. On and on.

If you're thinking digital HF take a look at MIXWIN. Loaded with various
interesting modes and options.
A quick GOOGLE search will get the download sites.

Obviously some do not. I didn't make up this thread and the direction in which it went. Some people have noted that they simply memorized the Technician test material and whatever knowledge they picked up was almost accidental.

And how is what I am posting a bitter lament or a righteous prophecy of doom? Its a statement, like I will climb that mountain, and anyone who wants to come with me will have to climb it too. Sheesh!

PSK-31, to name just one example. Remember the "Warbler"? Little
one-board rig the size of a Band Aid box, totally controlled by the
attached computer. A watt or so of PSK-31 on 3579 kHz, cost $40 as a
one-evening kit. $40 rig connected to a $1000 lapper - tail wags the
dog.

> However the things have also revolutionized the workplace and

Same here. Most customers won't accept anything that isn't on CAD. To
their specific CAD standards, too.

> at the 1 Kw input level per jug on any realistic basis.

Not with junctions, anyway.

In fact, some newer bottles are less favored. Take the Heath line -
they SB-220 was/is a pretty nice amp, pair 3-500s, desktop, easily
QSK'ed (if QSKing is ever really easy). Then Heath made the SB-230,
with the conduction-cooled 88-73 or whatever ceramic-metal tube it
was. Turns out that today a pair of 3-500s is much cheaper and more
available than the newer ceramic metal tube in the '230. So much so
that you can pick up a '230 for cheap because the tube costs so much.

That there are far more bottles making big RF in hamshacks than
silicon.
>

Of course. Basic engineering economics applied to the hamshack. The
Ancient Ones built racks of monoband finals to get quick bandchange.
Quite a practical solution back when surplus RF parts (and chassis!)
were cheap.

No commercial 4-1000s but a few years back yer buddies NL and JJG were
over to the Southgate Radio factory on RadioTelegraph Hill with a
bunch of unmarked Ls and variable Cs. Used my Q meter to determine
exact values and quality. JJG was building a 160 meter 4-1000 amp. I
donated a few small parts to the cause. He won't blow it up, either.

Please don't feed the trolls. It only encourages them.
>
> What the hell is this "SIGNARS" crappola he's locked onto??

SINGCARS - Single Channel Grounsd and Airborne Radio System. First
used in Korean DMZ in 1988. Standard VHF shortrange single channel
voice radio for combat net use (and lots of other uses, obviously).
Uses frequency hopping SS to achieve security from interception and
DFing. Current cost in the $3000 range, according to websites I
visited. You don't wanna know what they cost in 1988. AN/WRC/91A is
one model. Why SINGCARS should be of interest to hams is a mystery.
Military did not develop and deploy SINGCARS so folks could have fun
using radio.

Lots of other duds from that generation out there, too.

> It's been

Of course - because the mission is completely different. So are the
resources.

> They take
> operator skill outta the equation which is the huge difference between
> ham ops and military ops.

If possible, they eliminate the operator, too. The US Navy no longer
has a specialty called "radio operator" or a similar term. Instead
they are communications specialists. Having a skilled operator
dedicated to radio comms is a weak point in military ops because if
you lose the op you lose the comms. That's a big reason why Morse use
by the military is almost completely gone.

To the military and commercial users, radio is but a means to an end.
To us hams, radio is an end in itself.

> Toss a 100w ham xcvr at the average Signal

Some could certainly do it. There ARE hams in the military, y'know.

DSP is cheaper and electropolitically correct. It's NEW, it must be
BETTER!
PROFESSIONALS IN RADIO told us so!

Note that my K2 has no DSP. Hmmm.

I'm not addressing "could haves" because, if I did so, I'd have to
address the fact that Bruce didn't pass the Extra at age four and that

you didn't pass it at all. As of this moment, Bruce (as unpolished as he is) passed the Extra exam as evidenced by the FCC's own database. You haven't but you've stated a number of times that you "passed the Extra". I didn't "let go of the fact" because it is a fact.

I do.

> I tested (Novice) in 72 and I had to do some thinking! Had to do
> some math, too! And I did a lot more when I moved up in 75.

The same was true for me a few years earlier, when I took the tests.
But the main point is that for over 40 years one did not HAVE to
actually "think" or comprehend the material in order to pass - all
that's been required is to get enough of the multiple-choices right.
Respected folks like K2UNK say they memorized the diagrams (with
little comprehension) back in draw-a-diagram times. I believe them -
don't you?

For all any of us knows, we may have gotten questions we thought we
"comprehended" wrong! As long as we got enough right answers, FCC
grants the license.

Now if the exams were essays where we had to generate original material, there'd be some indisputable proof of comprehension. Trouble is, the testing would then become very subjective, because whoever graded the exam would have to pass judgement on the answer. Even if FCC had the time and resources, the subjectivity of such tests would be a big problem.

Take a simple question like this:

"Describe the construction of a dipole for the 40 meter amateur band"

Simple, huh? Two pieces of wire, three insulators, coax and some connections. But how will the grader see it? Do we talk about mechanical construction or just electrical? How accurate must the formulas be, and how many are required? What about a balun? Should there be descriptions of noncoax feedpoints? Does "dipole" automatically mean a halfwave dipole, or can it be some other length? Do spelling and grammar count for points?

See how complex such a simple question can be?

> who devote enough energy to doing something as relatively easy as pass an
> Amateur license generally don't get into thos kind of problems...

'zactly. Find something safe that a kid is genuinely interested in, give them some resources, and watch 'em go to town with it. The kid who is busy following something he/she finds interesting for its own sake has no time or energy for trouble. Doesn't matter if it's tuba-playing, rock climbing or ham radio, the interest is the thing.

This is not a new problem. 30 years ago, in high school and college, us kids could get all the drugs we wanted. Weed, 'ludes, acid, and

speed were all around and cheap. Easier to get and cheaper than booze! But most of us just weren't interested in them because they essentially incapacitated you for other things for too long a time. As a young ham, I was concerned that getting busted could imperil my ham license. Also, who knows what those substances could do to my code speed?

> >Do you see ANY examples of problems in the ARS being caused by the

What words? The discussion is about growth and IL. Policy issues if I
ever saw some.

> IL has
> had bad efects on the ars, that it allowed growth for awhile only
> means it was not part of thing with some merit.

IL had some bad effects and some good effects. Whether it was worth
all the trouble is a matter of opinion.
>
> indeed IL being a bummer has nothing to do with growth or lack of it

Nonsense. If it caused growth, that's a good thing. If it hindered
growth, that's a bad thing.

One word: SPELLCHECKER. Every posting software I've encountered has
one. If you refuse to use it, don't be so thinskinned about an
occasional tweak over your multiple misspellings of common words.

> cheapshot

What's a cheap shot is when someone repeatedly refuses to use a spellchecker and burdens the reader with deciphering various gobbledygook. It's an act of hostility towards the reader.

Hans may call me "spelling kop" and other foma, but the facts remain. Refusing to use simple tools like a spellchecker when a person knows they are a poor speller makes that person look foolish and disrespectful of the reader. And it diverts attention from whatever message the poor speller is trying to convey.

Do you want to convey the same sort of image as 'ULX?

> >Is quality over quantity a bad thing? Or would you prefer the world of

"Jackie L." <buzzygirl@REMOVE.attbi.com> wrote

: can you briefly describe to me how and why a recruit would
: become a radio operator in the US military- pick your favorite branch- and
: what they'd do on an average (read: non-wartime) day insofar as their
: duties are concerned?

Well, that'll keep me busy for awhile!

First, I can only speak from the Navy point of view, since that's where my experience comes from. Some of the things I mention will be familiar to soldiers, airmen, and marines, but because of their differing environments much is also very different in terms of the things they do, the equipment they use to do it, and the basic mission of their communications services.

As to "why" a recruit would chose to be a Navy Radioman, there are as many reasons as there are people who are in the field. Probably number one is the fact that it's a "technical" job, the working conditions are generally comfortable, and it beats being on the deck force pulling lines, standing lookout watches, and similar tasks. Some people get into it because they're genuinely interested in telecommunications, radio, computers, and similar techie-geek kinds of things.

As to the "how" they become a Radioman, there are two paths. (By the way, the name has recently been changed from "Radioman" to "Information Systems Technician" to reflect the broad scope of their duties beyond simply being "radio operators".) The most common path is that they are enrolled (after "boot camp") in training schools which teach them the skills they'll need before being sent to the fleet. The other route is by on-the-job training in the fleet. Some sailors go to the fleet with only "boot camp", usually ending up on the deck force. They can apply to "strike" for a technical rating like Radioman, especially if they have some related skills acquired before entering the Navy. Many hams became Radiomen through this "OJT" path.

The things they do in the fleet are extremely varied, depending on the sort of ship they're assigned to, and their level of training and their rank. Also, the things they do during peacetime are exactly the same things they do during wartime, although perhaps with less "intensity".

For illustration, let's consider a 'mid-sized' warship like a destroyer or cruiser. These kinds of ships will usually have 15-20 different radio-communications circuits in use simultaneously. (Other ship types would have differing requirements and methods -- submarines, for example.) Long distance circuits (back to shore and to distant ships in their battle group) will be via satellite radio, backed up by HF radio. These circuits

are usually low speed data, often multiplexed so that many individual data streams are carried on the same RF link. Occasionally they will "disable" the satellite link to exercise and prove-in the HF path under "real payload" conditions. Unlike a ham who just strokes up on a particular band and works whatever DX may happen to be around at the moment, the Navy Radioman must understand HF propagation well enough to keep 24/7/365 communications up and running from his mobile platform to a specific host terminal ashore.

"Local" communications within the battle group fall into two categories -- "human to human" and "weapon systems/threat sensor/threat evaluation systems". Both are carried on UHF/VHF/microwave frequencies. The "human to human" communications are voice communications between the various ships in the battle group, and there are generally about a half dozen or so different circuits in play. Radiomen don't actually "talk" on these circuits, but are responsible for equipment tuning, patching the right circuits to the right space (bridge, CIC, etc.), having the right encryption schemes in use, and similar tasks. Once up and playing, the radioman has no ongoing involvement, unless troubles develop in which case they tune alternate equipment and put it on line.

The really "whizzy" communications are the communications between the various threat sensors and the weapons systems. Modern warships operate in an environment where threats come from other surface ships, from the air, and from under the sea, sometimes all simultaneously. All the ships in the battle group continuously share this information with each other on very high speed data radio links, in such a fashion that the entire force becomes a single integrated weapons system. For example a distant surface target may be detected and evaluated as hostile by an airborne sensor (aircraft) and the actual reaction selected to deal with the threat may be a missile from an AEGIS cruiser which has never itself even "seen" the target with it's own sensors. Again all of these channels are established by the shipboard Radiomen and are continuously groomed to reflect changes in the force mission and physical disposition.

I'm getting long winded here, but I think you can start to grasp the complexity of modern military communications, and the above is very much oversimplified. Military communications people are not the "police dispatchers" that Brian Kelly mistakenly assumes, but products of extensive training and experience. Amateur radio indeed looks very Amateurish alongside these communications systems managers.

73, de Hans, K0HB
Master Chief Radioman, US Navy

: Having a skilled operator dedicated to radio comms
: is a weak point in military ops because if you lose the
: op you lose the comms.

Jim, you need to stick to topics where you have some knowledge. Obviously you don't understand military communications systems.

By the way, the term "Radioman" was changed to reflect the fact that Navy communicators are responsible for establishing, maintaining, and grooming the entire telecommunications information stream, not just the radio link.

: That's a big reason why Morse use by the military is almost completely gone.

Morse by the military is completely gone because modern multithreat warfare can't be fought at 25WPM! Reactions must be instantaneous.

She must have known it well enough to convince the FCC examiner.

Point is that down through the years we have solid evidence of young children being able to actually learn enough radio to become licensed hams. With ZERO evidence of any wrongdoing.

Didja check out WA2SI's link to "Radio Rescue"? Fascinating true story.

Same here. Point is, folks with ZERO evidence have accused the ARRL, VEs, and the children themselves with "fraud" based solely on the claim that young children cannot possibly have legitimately passed the license tests.

Partly because the tests are given so much importance. High SAT =
better chances getting into college of your choice. Low SAT = poorer
chance of same.

You do not want to know what I did on the SATs back in the early
1970s.

And, once again, I say that Riley has every right to believe and think as he does. However, I disagree with his opinion. That you agree with it, Larry, is no surprise--as you've always proven to be nothing but a follower. Ya know...the Queen was once the "authority" where our forefathers lived. Imagine if they'd let "authority" be the determining factor of their decisions...

Well, no, no, no. That's not why I asked. There's a great bunch of folks on the TI repeater (TexIns=Texas Instruments), but the last time I was on that repeater--goodness--was over 5-6 years ago. You said "engineering" so I made the connection that you're possibly in town for something to do with TI. There's also a Alcatel repeater...but, goodness, I am not sure of its frequency. I *think* there's a machine for Nokia...but, again, not sure of the frequency.

No, I would most *likely* be on 145.190 ("the Big Machine in Big D). However, I rarely even listen any more, let alone get on the air. My "new" (year old) truck has provided me with listening pleasure that I couldn't avail myself of before--CDs and tapes on a half-way decent stereo. So, I've been "reading" books on my commutes to and from work; a pleasure I was never able to do before.

However, if you'd let me know when you're going to be in town, I'd be happy to get on the air with ya. The best--and I don't say this because I consider my home repeater--repeater in the area is most likely the 145.190 machine...PL 110.9. Well, there's one better and that would be the 145.35 machine (I think they've PL'ed it--and that is probably also 110.9), where you can say hello to a bunch of friends and acquaintances of mine--at least I think they're all still there. Both machines have great range. I think the most used is 146.880, the Dallas Amateur Radio Club machine. It's got a great bunch of folks on it, too; however, there are a few folks whom I don't

wish to even hear let alone deal with so I'd likely not be there.

If you've got 70cm capability, there's the sister to 145.190: 442.625 (PL 110.9). Regardless, do bring your radio if you feel like it--you'd really enjoy the guys on the TI machine. Many, many of the guys on 145.35 are pilots (with personal aircraft) and they're all real friendly. Can't think of his callsign, but Harry is a really great person...he has a very odd sounding voice (warbly?) but he's a really nice guy. And, Henri, N5KA, well, he's just a wonderful person. There's so many of them on that repeater.

Yeah, Larry, I think. And, I intend to do nothing about it. I am doing the
right thing: by having the callsign I wish to have. So, you're absolutely
right--I *do* have it in me to do the right thing.

What is supposed to happen, Larry? What do *you* intend to do about it,
except be an armchair critic? You do tend to do things the easy way.

You GO, Steve!!! Fakes like this need to be exposed more and more. People
are just often too afraid to "take on" the liars and fakes.

http://www.authentiseal.org/

On that website, check out the names Paschall and Yeager. They are our
local crappy folks, and some folks took a lot of heat for exposing them, but
they've were exposed.

not tyhin skined but it was an is a cheapshot proving you lack
anything of substance, something you also prove with your verbage

as to every posting software you expernce is not complete

>
>> cheapshot
>
>What's a cheap shot is when someone repeatedly refuses to use a
>spellchecker and burdens the reader with deciphering various
>gobbledygook. It's an act of hostility towards the reader.

bull since you clearly understood or did you if you understood then
you were not burdened. now you claimed to be burdened,

it iwas and remains a chapshot and hostile towards those les able than
yourself, was in the opinion of some pro's an act of hostility

>
>Hans may call me "spelling kop" and other foma, but the facts remain.

i know of no software compatable and easy to use that alows for it i
would nhave to use several different programs and go though quite a
bit of hassle, it may well btw make the pster look follish to you, but
that is a refelction of your smal mind

>

>> >actually do, rather than things we'd like but FCC will not do).
>>
>> agreed
>
>So what are YOUR ideas on that subject?

i have sated them often one test one class (prosible since it would
reduce the burden on the FCC) I think it merits thought dicussion
wether we would be beter with more of GMRS license we pay and we
tranmit with the fees resevered for enforcement on our bands, not sure
i agree with the last idea but i think it merits thought,

OTH none of this has anything to do with this thread

never said the secret service but the FBI did state when asked i could
say about anything including the above to defend myself. it would only
be a crime if i tried to use to obtain something i was not entitled
to. such as perhaps using such a claim to obtain the use of Govt
property
>
> Oh yes...About the "drafted" part....Anyone who is knowlegeable on such

never said a lawyer in my home county wa retained. I have long
retianed several lawyers in the ciruse of my busness they were
consulted

>advised that he was about to find out what civil penalties could be brought
>against him for such allegations. Seems he got the hint, but maybe he needs to
>be reminded.

i was never so advised never cliamed to be so adivised, and no lwayer
i woudl hire could posiblity know that i was about find out what civil
could be brought. I may have stated that you could have brought a
suit but would be unlikely to prevail, i may not i simply don't
recall.

he did advise i could sue you stevie but that it was likely not worth
it
>
> So...it's been a pleasant year as the Illiterate Drafted Gay Pagan

gee you just havn't noticed stevie i have been posting less this year,
a marraige and building a new house have been taking up my time
>
> For those who care to try an engage Mark in any posts, please not that he

please not? do you mean please note funny that you take me to task
over spelling can't manage yourself

>has publicly stated that he ahs been told by federal agencies that it's OK for
>him to lie or mislead ANY person for any reason, and that he will do so at
>liberty.

nope i have never said that i have siad i may lie for my safety and
that if i feel it will make me safer i will lie. i point out i am not
under oath here. i will also leave out details at times when they are
irelvant to point. this is not a court room or any officail proceeding
and therefore I or you or anyone else may lie legaly in this forum

>
>as to every posting software you expernce is not complete

The lack of "substance" is yours, Markie. If you care so little as to NOT
take the effort to make yourself understood, then you obviously have nothing to
say worthy of consideration...Serious consideration, taht is...Your rantings
and obvious abuse of The King's English provide hours of entertainment!

>it iwas and remains a chapshot and hostile towards those les able than
>yourself, was in the opinion of some pro's an act of hostility

The "problem", Your Jesterishness, is that you seem to revel in being an
idiot in public. You do it so well when the "fix" is so simple.

>i know of no software compatable and easy to use that alows for it i
>would nhave to use several different programs and go though quite a
>bit of hassle, it may well btw make the pster look follish to you, but
>that is a refelction of your smal mind

MS Word and other programs make it almost (since we ARE speaking of YOU)
idiot proof. It underlines every error and provides alternatives.

And Markie, the "smal mind" is yours for thinking that the rest of the world has to accomodate YOU, rather than you overcoming your obvious shortcomings to fit in.

>can't answer the question i don't know who Harrison Bergeron is.

Silly Jim. Why should he expect you to REFER to an encyclopedia when you can't even SPELL encyclopedia?

>>So what are YOUR ideas on that subject?
>
>i have sated them often one test one class (prosible since it would
>reduce the burden on the FCC)

How so? The FCC just verifies the data on the application from the VE, enters it into the database and spits out the license document. It wouldn't matter to them if there was one license class or a dozen.

>OTH none of this has anything to do with this thread

Very little of your stuff has anything to do with any thread.

Steve, K4YZ

>>silly little group is not that Important.
>
>i could not have put it better myself

Then you have laid claim to your own assertion of "smal mind" that you claim of others.

ANY forum in which one seeks to be heard AND taken serously deserves one's best effort.

Judging by YOUR posts, Markie, (past and present) it appears that you are quite satisfied with the title of "Court Jester". Nothing you post here deserves any other consideration until you clean the mess up.

In your "post" as an officer of the club in Sangamon County, are you so careless and cavalier about what you write and how you write it?

did you read the FCC? the FCC considrs reducing the number of classes
to a reduction in thier work. I can seculate as to how since the
processing of the entry requires computer time, in addition one class
one set of rules means enforment is easiler

>

I am not harassing you, Mark. There is nothing in your e mail that is not
here. I select the courtesy copy feature of AOL so as to be sure that you have
the opportunity to read these thouroughly. I realize it takes a person of your
limited skills a while to assimilate the message, and every chance I can give
you to fully comprehend the message is a courtesy to you.

Please take advantage of it.

Stee, K4YZ

i have asked before but who died and made you god? i don't have to met
your stanards anymore than you have to met mine.
>
> In your "post" as an officer of the club in Sangamon County, are you so
>careless and cavalier about what you write and how you write it?

what post are you referring to not sure

if you are refering to what i may written to club when VP 2years ago
President last year, and as Past President and general pain in the
rump now well some did in fact contain spelling errors esp a peice
about i felt very strongly after 9/11. i often find that allowing them
makes people think and sometimes even aids in conveying the message,
not always

remember people that will ignore a shout will sometime strain to hear
a wisper.

that and the fact it is easier and more natural to me i have decided
to let things ride.

besides i admit to enjoying piss you off so. i do get tried of it and
spend less time here at times but i have never left

>
>nope that is lie. i hoped to deter you from threatening to kill

BBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
AHAHAHAHA ! ! ! ! ! !

WHOOOOHOOOOO ! ! ! !

Let's see...you LIE about being an officer in the Armed Forces, and THAT
is supposed to deter someone from trying to kill you.?!?!?!?

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! !
!

>nope not and never said i was gay an don't ask don'ttell and other
>policies do not prevent gays or bi from serving merely affecting their
>ability to ACT on something etc

Yes, Markie, if a bi, gay or lesbian person verbalizes their sexual
preferences or activities, it DOES affect their ability to serve in the Armed
Forces. Had you ever REALLY been in the Armed Forces, you'd know this.

>never said anything bout schild support, although she would like to
>find for simple violoence posiibly i chose the safer route

Oh really, Markie, please don't start making MORE assertions that are so
easily refuted by a person who decides to look your past NG misconduct up in
Google.

>indeed the name i use today is not the one of my birth etc. people can
>can their names stevie

What? Markie, it's bad enough you refuse to use a spellchecker, but you
won't even complete your sentences!

>>He also insists that the FBI and Secret Service said it was "OK" for him
>to
>>commit a felony (impersonating a commisioned officer of the Armed Forces) in
>>order to put me and his ex-wife off his trail.
>

>say about anything including the above to defend myself. it would only
>be a crime if i tried to use to obtain something i was not entitled
>to. such as perhaps using such a claim to obtain the use of Govt
>property

Public misrepresentation of one's service as a commissioned officer is a
felony. Period. You blatantly represented yourself here to everyone that you
were a company grade officer in the Armed Forces. You lied. You broke the
law. NO representitive of ANY federal angency will tell ANY citizen that such
conduct is lawful.

>well you still have not explianed that one right but i am still not
>going to explain the anomilies the right to speak or not is mine
>stevie

Lied. Told a tale. Misrepresented the truth. Got caught. YOUR bust,
Markie. You're still a fool.

>never said a lawyer in my home county wa retained. I have long
>retianed several lawyers in the ciruse of my busness they were
>consulted

Still clueless. Still not paying attention. Whew.

>i was never so advised never cliamed to be so adivised, and no lwayer
>i woudl hire could posiblity know that i was about find out what civil
>could be brought. I may have stated that you could have brought a
>suit but would be unlikely to prevail, i may not i simply don't
>recall.

OK...if you say so, Markie! I am sure that there are great gaps in what
you "recall" and don't "recall".

>he did advise i could sue you stevie but that it was likely not worth
>it

BBBBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHHAAHHAHAHAHAHAHAHAHAHAHA !
! ! ! ! ! ! !

>gee you just havn't noticed stevie i have been posting less this year,
>a marraige and building a new house have been taking up my time

simple comprehension of the written word.

>please not? do you mean please note funny that you take me to task
>over spelling can't manage yourself

Hmmmmm....one "e" versus reams of fractured, misspelled, incomplete and
basically incomprehensible drivvel. Let's see....Hmmmmmm

>nope i have never said that i have siad i may lie for my safety and
>that if i feel it will make me safer i will lie.

Whew...So quickly you forget, Markie...However Google doesn't.

>this is not a court room or any officail proceeding
>and therefore I or you or anyone else may lie legaly in this forum

"lie legaly"...?!?! It's LEGAL to lie? Is it moral? Is it not weakness of character to lie? Nixon lost the White House for lying. Jimmy Swaggaart and Jim Bakker lost ministries and congregations for lying. But it's OK for Mark Morgan to lie in public?

>i realy must decline that honnor, and the mwmorgan@yahho.ocm is not
>valid never used it mwmorgan was tagged to some domain can't recall
>right off.

Forgive me on the incorrect domain with "mwmorgan", however the "honnor" was not offered to you...It was offered to any third parties who are inclined to an evening's research into the mind of a very twisted, confused and incompetent correspondent. That would be YOU, by the way.....

>Why do you have such a problem with my changing isp from to time as i
>try to get away from the situation i started in here a nonlocal isp?

It's just funny watching you juggle your excuses, Mark. When you posted under the "mwmorgan" screen name, you at first denied your true identity, but your fractured use of English made it glaringly apparent to everyone EXCEPT you who was responsible for them.

>> Welcome back, Markie.
>
>never left and why no harass me both in public and private

Yes you did "leave", (over a year) and I am not harrassing you anymore than your abuse of the written word in a public forum is "harrassing" me.

Markie, why don't you spend an hour hanging outside an elementary school
and get a third grader to explain to you what's so funny about that
sentence...?!?!

>nope you could ignore me as you have threatened from time to time

And miss all the fun...?!?!

>indeed it was silly but not for that reason. it was silly to make the
>reference rather than say what he mean't

He said EXACTLY "what he mean't". YOUR lack of comprehension defeated it's meaning to YOU. Jim made the "mistake" of assuming that you were sufficiently knowledgeable to understand it.

>> Very little of your stuff has anything to do with any thread.
>
>really? Sevie how would you know when you can't according to you read
>my posts

Geeze, Markie, you can't even abuse my name correctly! Whew!

And most of your "posts" go wanting for comment since you cannot put together a comprehensible sentence.

Steve, K4YZ

not ture Stevie
bedsides a col or ltc is a feild grade officer not company grade,

i lied or will not say i did not but lieing is legal. i am not under
oath i broke no law you did in making the threat to kill me, it was "
on shot one kill" as i recall that is a felony. i can take anyaction
in defense of such a threat if depnds me, just i can't walk up an
shoot you but if you fire a 22 at me, even if you deliberatly miss, i
can reply with a 306 rifle and kill if i feel threatened

>
> >well you still have not explianed that one right but i am still not

>Markie. You're still a fool.

i have lied and i will it is safer that way since you don't know
exactly what i am or where i am caught never deined it once i was home
and better able to defend my household. indeed if you had carried
though with threat it wasn't even me you would have shoot but my dad

>

>simple comprehension of the written word.

i understood it you said i was not active in the ng i have been i have
been less active over this and told you why i have ben posting less
not not at all you idoit

>
>>please not? do you mean please note funny that you take me to task
>>over spelling can't manage yourself
>
> Hmmmmm....one "e" versus reams of fractured, misspelled, incomplete and
>basically incomprehensible drivvel. Let's see....Hmmmmmm

it is important when it is you that isisting someone else needs to
spell correctly i don't see why you need to either untill you take
others to task for it.

btw you claim to be christian, if memory serves, so it seems you odd
to have remand of the line from christ of "let he who has not sinned

cast the first stone" somehwere in mathew i believe go check it out

>>nope i have never said that i have siad i may lie for my safety and
>>that if i feel it will make me safer i will lie.
>
> Whew...So quickly you forget, Markie...However Google doesn't.

i have never said i could lie for whatever reason i have said i can
lie for sefldefence futher i state now i may well if i see fit if i
feel it makes me safer

>
>>this is not a court room or any officail proceeding
>>and therefore I or you or anyone else may lie legaly in this forum
>
> "lie legaly"...?!?! It's LEGAL to lie? Is it moral? Is it not weakness

it is legal to lie. imo it is also moral to lie at time. indeed it
shows a strengh of charater to lie when called for

>of character to lie? Nixon lost the White House for lying. Jimmy Swaggaart

my memory of nxion is that he lied in an officail proceeding not a ng

>and Jim Bakker lost ministries and congregations for lying. But it's OK for

and Pat robertson lies all the time and keep his. indeed i and many
could say that every chritsian priest and minister lies everytime
he/she delivers a service

>Mark Morgan to lie in public?

sure is ok just as it is ok you for to lie, except for that little bit
about let he who has not sined cast the first stone

i know it hard for you to understand but somke people follow religions
other than yours and that you, alegedly, swore an oath to uphold that
right marine, or rather aleeged marine.

>
>>i realy must decline that honnor, and the mwmorgan@yahho.ocm is not
>>valid never used it mwmorgan was tagged to some domain can't recall
>>right off.
>
> Forgive me on the incorrect domain with "mwmorgan",

it is not for me to forgive but i will point out even you admit to
presenting inaccurate data in your posts in other words lieing, why
should you be eblieved when you alege other things, many people wil
take that as i did furman on the n word in th oj case once i knew he
was lieing once i took nothing he sai under oath seriously

>however the "honnor"
>was not offered to you...It was offered to any third parties who are inclined
>to an evening's research into the mind of a very twisted, confused and

>incompetent correspondent. That would be YOU, by the way.....
>
>>Why do you have such a problem with my changing isp from to time as i
>>try to get away from the situation i started in here a nonlocal isp?
>
> It's just funny watching you juggle your excuses, Mark. When you posted
>under the "mwmorgan" screen name, you at first denied your true identity, but

lie i never diend it i signed it kb9rqz i said i was me when asked
changing isp's mean your email address changes most of the time.
indeed in a few months i will likely be changing isp again when i
move, is that going to make yoiu accuse me again of hiding?

i did deny changing screen names because i don't use them, that is
something of aol and maybe a few other sources. i di not change screen
names i changed isp's

grow up not everyone uses aol

>your fractured use of English made it glaringly apparent to everyone EXCEPT you
>who was responsible for them.
>
>>> Welcome back, Markie.
>>
>>never left and why no harass me both in public and private
>
> Yes you did "leave", (over a year) and I am not harrassing you anymore than
>your abuse of the written word in a public forum is "harrassing" me.

nope i have posted several times over the last year you just did not
notice. i hav eposted less till recently, all of which is my right
stevie. then kill file me as you claim to have done and ignore me

it is your choice yours to double send your messages, twice becoming
harassment. it your choice to post these lie, and mie to reply to them
i may give after awhile perhaps you will then think i have left again

btw this the last post i will to this thread as i will ignore it in
future and i will be not leaving valid emailadesses in my posts to
save space in my email in box

"Dick Carroll" <dixie@townsqr.com> wrote

: Ummmm. Hans, the big problem you face with all that lengthy roll is
simply
: that there no longer exists any such thing as a Navy radio operator

Well, Dick, you are just plain flat-assed wrong.

Here's what the Chief of Naval Operations has to say on the topic. If there are no Navy radio operators, then what the hell is paragraph 5 all about? Sunuvagun!

FM CNO WASHINGTON DC//N1//

TO NAVADMIN

UNCLAS file://N01220//
NAVADMIN 293/99

MSGID/GENADMIN/N13//

SUBJ/RADIOMAN (RM) RATING NAME CHANGE TO INFORMATION SYSTEMS
TECHNICIAN (IT)//

REF/A/MSG/CNO WASHINGTON DC/051331ZSEP95//

REF/B/MSG/CNO WASHINGTON DC/191850ZFEB98//

NARR/REF A IS NAVADMIN (215/95) DATA PROCESSING TECHNICIAN AND
RADIOMAN MERGER. REF B ANNOUNCED THE RM-DP MERGER
SURFACE WARFARE TRAINING AND READINESS REVIEW (SWTRR) HELD IN
MAR 98.//

RMKS/1. THIS NAVADMIN ANNOUNCES NAME CHANGE OF THE RADIOMAN (RM)
RATING TO INFORMATION SYSTEMS TECHNICIAN (IT) EFFECTIVE IMMEDIATELY.

2. ACCELERATION OF NEW TECHNOLOGIES IN TELE-COMMUNICATIONS AND
INFORMATION SYSTEMS DISCIPLINES REVEALED THE NEED FOR A NEW RATING NAME
THAT BEST REFLECTS SKILLS AND ROLES OF SAILORS IN THIS RATING.

3. THIS NAME CHANGE IS CONSISTENT WITH ONGOING NAVY EFFORTS TO
PROPERLY MAN AND TRAIN THE RATING TO HANDLE THE CHANGING ENVIRONMENT OF
THE INFORMATION AGE. NEW RATING NAME ALSO REFLECTS NAVY COMMITMENT TO
IT-21, INFORMATION TECHNOLOGY FOR THE 21ST CENTURY, AND SERVES AS AN
ATTRACTIVE RECRUITING TOOL FOR POTENTIAL RECRUITS INTERESTED IN THESE
SPECIALIZED TECHNICAL SKILLS.

4. PER REF B, AN RM-DP CONFERENCE WAS HELD IN MAR 98. ATTENDEES OVERWHEMINGLY AGREED A NAME CHANGE WAS NECESSARY FOR THE NEW RATING. ATTENDEES CITED FOL JUSTIFICATION:
(1) NEW NAME SHOULD REFLECT CHANGING ROLES AND FUNCTIONS;
(2) NAME SHOULD BE SEPARATE IN NATURE FROM THE HISTORICAL PARADIGMS OF RM AND DP;
(3) NAME NEEDED TO REFLECT RATINGS NEW COMBINED ROLES, EXPERTISE, AND SKILLS; AND
(4) ANY REFERENCE TO COMMUNICATIONS OR COMPUTERS IN THE NEW NAME WOULD NEGATIVELY PORTRAY A DISTINCT AND PREFERRED EXPERTISE.

5. IT'S OPERATE AND MAINTAIN NAVY GLOBAL SATELLITE TELE-COMMUNICATIONS SYSTEMS. THEIR DUTIES INCLUDE DESIGNING, INSTALLING, OPERATING, AND MAINTAINING STATE OF THE ART INFORMATION SYSTEMS. THESE SYSTEMS INCLUDE LOCAL AND WIDE-AREA NETWORKS, MAINFRAME, MINI AND MACRO COMPUTER SYSTEMS, AND ASSOCIATED PERIPHERAL DEVICES. THEY PROVIDE COMMUNICATION LINKS AND CONNECTIVITY TO EVERY SHORE STATION AND SHIP AT SEA ACROSS EVERY BAND OF THE RF SPECTRUM.

6. RESPONSIBILITIES OF THE RATING HAVE EXPANDED WELL BEYOND TRADITIONAL RADIO SETS AND MAINFRAMES. THE IT RATING BETTER REFLECTS THOSE SKILLS AND ROLES ASSOCIATED WITH THE RATING TODAY, AS WELL AS IN THE FUTURE.

7. IN KEEPING WITH THE PROUD TRADITION OF THE RM RATING, THE RATING BADGE OF ELECTRONIC SPARKS ASSOCIATED WITH THE RATING IS BEING RETAINED.

8. RELEASED BY VADM D. T. OLIVER, N1.//

Therefore we can derive from your lack of effort to make yourself more legible and comprehensible that you attach NO importance to this forum. That being said, WHY are you here?

>i have asked before but who died and made you god? i don't have to met
>your stanards anymore than you have to met mine.

No one made me God, and it's obvious that YOU don't feel compelled to meet ANYone's standards since you refuse to correct your own inadequacies in spelling and grammar.

And as for me meeting YOUR standards...?!?!

BBBWWWHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! !

I'm not taking a lobotomy for ANYONE, least of all YOU!

>besides i admit to enjoying piss you off so. i do get tried of it and
>spend less time here at times but i have never left

Oh, Markie! You flatter yourself! You don't "piss (me) off". On the contrary! I take great pleasure in poking holes in your rants and showing your lies and misdeeds for what they are!

The only time you have "PO'ed" me was to claim the rank and title of a commisioned officer. You have absolutely NO idea how offensive it is to a veteran to have some puny little nobody try to elevate themselves or gain some advantage by unlawfully and inappropriately hiding behind something you neither earned or were awarded by competent authority. Especially when the claim is so easily and readily refuted.

Kim, W5TIT has provided a link to a list that is maintained to expose those who claim to have been Navy SEALS but never served on the teams...Too bad there's not a similar list for those who falsely claim to have been in the Armed Forces in general. But I imagine that such a list would have to be a

domain unto itself.

Enjoy your "days off". We'll be waiting here for more of your rantings, railings and generally humorous misdeeds.

Steve, K4YZ

I can personally recommend Fornada Software's QuickSpell ver. 3.0.

see: http://www.fornada.com/

This spellchecker acts in real time with ANY Windows application.
It gives you a little red or green light above and to the right
of the word you are typing as you type it.

It can also check and correct blocks of text copied into/out-of
the Clipboard.

It costs $24.95 for a single-user copy. It's shareware and can
be downloaded from their website, or from Simtel.com.

.....in order to rememeber what was being said by who. And if I DO need to
research a comment by ANYone, I know how to do it.

>then you should not be smirking i am aware of the spelling and
>mistakes i make in an offhand forum

"Offhand forum"...?!?! So, everything said by everyone else in this NG is
"offhand" and without merit?

And the smirking is not merely at your (poor) spelling. It's the context
in which your comical misspellings occur. You don't seem to grasp your own
foolheartiness.

>you stated in material you removed from the exchange that only the
>ve's are monitoring the sessions then you stated that others are one
>of those statement is a clearly a lie, i don't know which, and i
>hardly care

I never said, nor did I acknowledge, that ONLY VE's are monitoring the
test sessions. It is not a lie. And you could not care since you are
incapable of knowing the difference.

>who else moinitors the sessions, obviously as a mere tech i can't know
>that answer,(according to stevie) you claim to know but will not

>answer the question.

Who else monitors the exams are the FCC and other VE's. I clearly stated
that VE's, NOT a part of the team doing the testing, audit the test sessions.

>>What is "binsiting"...?!?!
>
>inssiting

WHAT is "inssiting"...?!?!

>>What is "violtion"...?
>
>you know you idoit obviously violtion is a word i can't spell

Neither is "idiot", which I have pointed out to you in several posts today
and last night. Of course, had you used a SPELLCHECKER, it would have alerted
you to the errors and deprived me of the opportunity to once again rub your
nose in your stupidity.

However your anxiousness to whip out a verbose retort overwhelmed your
common sense, once again allowing me the opportunity to have fun at your
expense.

Thanks!

>>See, Markie...you've got me smirking again!
>
>Am i remembering you claiming that SM is sick if that memory serves
>then i will proceed to cal you sick by your own stanards, not by mine
>of course but your own

I assume you refer to "sado-masochism", Markie, which is the propensity of
the afflicted to enjoy inflicting pain for the sake of experiencing the pain
itself.

"Smirking" is an attempt by the amused to prevent an overt laugh. Your
ever-deepening fall into your own misdeeds is what amazes me. Laughter is
hardly painful.

I'll add in the Army point of view, the Army of today. First of all
every Army person is a soldier FIRST, a specialist second, that
unchanged since WW2. No exceptions. As with the Navy and
ship crews, Army forces have coordinated "crew" functions for
the entire "crew"...different land "crews" define their overall
function: Infantry, armor, artillery as the "line" units directly
involved with fighting...signal for coordination, transportation for
movement, quartermaster for supplies, ordnance for keeping the
ammunition of warfare on-hand and working, medical for health
and aiding wounded, intelligence for finding out where the enemy
is and as much as possible about them...many other specialties
but, above all, each is a soldier and warfighter first.

Modern land force radio communications at the battalion and lower
level (4 squads of 12 soldiers in a platoon, 4 platoons in a company,
4 companies in a battalion is a general sizing) is relatively simple.
The standard small-unit radio for manpack and vehicular (land and
air) use is the SINCGARS family of 30-88 MHz, 0.1 to 50 Watts,
clear or encrypted voice or data mode. SINCGARS makes a
terrible problem for enemy interception because it hops frequencies
ten times a second. It doesn't have the conventional frequency
selector controls, just an indicating touchpad where the "hopset"
is entered, the "hopset" defining mode of operation as well as the
encryption and frequency pattern. The internal timeclock is better
than 4 seconds a day but may be set precisely by connecting a
military GPS receiver (AN/PSN-11) to the front panel for an exact
time and date. SINCGARS works best in a network but can be

used as well in a linked pair. It is secure and difficult to find yet can be used by non-signal personnel after brief training.

Signal specialists in battalion and lower levels do other things. They establish communications with military aircraft in the 225-400 MHz band, operate radio relay sets that handle multiple voice and data lines to other, larger units or to radio relay aircraft or satellites, handle wire, data, terminal signal interfaces to/from larger organizations, and to assist in field-level maintenance of common radio and electronics. Rarely is there a necessity to operate on HF nowadays but there is still equipment for that job.

Intelligence specialists are charged with numerous other tasks, everything from passive snooping on the enemy trans-missions, operating and maintaining the UAVs (essentially flying electronic systems), to examining captured enemy radio and electronic equipment. ELINT (ELectronic INTelligence) involves a combination of "scanning" in many bands and translation of both language and electronic signal modes...sometimes when language and modes are different than first assumed.

Artillery in the Army depends on both communications and electronics for tracking targets and coordinating multiple battery fire as well as simple "rock-throwing" aiming. There are computer systems for artillery fire control (TACFIRE, one of the oldest as an example)...and that must include defense against enemy aircraft and missles. Armor units require radio networking for coordination and movement, not only of battle vehicles but support vehicles as well...and they rely on GPSS for instant position data which is converted to small computer screen displays in most vehicles. Support trucks must keep up with them even when the battle lines change by over 300 miles a day. Only radio can do that effectively and automatic position data exchanges enable support group leaders to plan their ordnance truck and tanker movements.

Above battalion at brigade, regiment, division levels the message centers look more like data terminal offices in olive and sand camoflauge with a great variety of large commsat dishes, radio relay sets, or troposcatter radios up and working on many bands. Alongside them are trailers containing the entire telephone centrals of small towns to handle the enormity of voice and data channels needed for supporting 4 to 10 thousand in brigade to regiment size forces. Data terminals are high speed and have encryption capability...as do the telephone central trailers. The amount of information transferred is enormous at the division level; during the Gulf War one day's worth of messaging exceeded the amount of messages sent all year on the amateur NTS.

Communications MUST tie into Air Force and Navy networks
for coordination of all branches in every military action now.
Communications links everyone on the digital battlefield and
all must work with the same information to accomplish their
objective. All of that requires specialists with training in not
just small radio but computers, telephone equipment,
landlines, satellite radio, intelligence monitoring, troposcatter
communications, radio relay equipment...all capable of working
in the harshest of environments, not just in weather but from
enemy forces wanting to destroy all friendly communications.
It's an exciting and challenging task and I think the US Army
is up to it wherever it might happen in the future.

It was both. :-)

The NATO standard phonetic alphabet became doctrine
in mid-1955. The ICAO rubber-stamped that for inter-
national civil aviation a few weeks after that.

Us signalpersons in uniform got to self-teach ourselves
from mimeographed copies...no xerocopy machines
then and nobody wanted to scratch on the military
budgets to print it formally until the next year.

electronics for Department of Defense contracts.

>By the way, the term "Radioman" was changed to reflect the fact that Navy
>communicators are responsible for establishing, maintaining, and grooming
>the entire telecommunications information stream, not just the radio link.

The same is true in the Army of 2002. Communications of all
kinds are now firmly set into the integrated environment of
"The Digital Battlefield" on land, coordinated with air and sea
forces.

>: That's a big reason why Morse use by the military is almost completely
>gone.
>
>Morse by the military is completely gone because modern multithreat warfare
>can't be fought at 25WPM! Reactions must be instantaneous.

Hans, I doubt he understands any of that "immediate response"
necessity...despite ICBMs that were only 20 minutes to dooms-
day from the time he was a child...or the 600 Knot strike aircraft
back before that in the Korean War era...or the first appearance
of short-range battlefield missles such as the Army's Honest John
in 1955...or the fact that 16-inch naval rifles were aim-assisted by
millimeter radar...or that incoming Exocets required automatic
tracking and shooting-at by a Phalanx system gatling gun after
the Falklands War (didn't have it then and the Brits sure could
have used it)...or that ASW teams need to talk to one another
to GET that hostile submarine before it can sink a friendly. A
patrol of a dozen out 20 looking for an enemy battery wants to
report its exact existance NOW...that battery doesn't have Volts,
it has HEAT and can kill and maim dozens-plus after a half-
minute flight of a single artillery round. Multi-ton Abrams tanks

traveling 40 MPH over rolling desert terrain don't have the luxury of gentleness to tap out morse on a knee-strap key when the tank crewmen have to hang on to anything inside. Fleets need accurate position reports NOW through GPSS, not the leisurely sextant-ephemeris-lookup method and to accurately coordinate that with other ships...one mistaken number in a position report sent by morse can be deadly to thousands. Aircraft supporting ground troops in 500 MPH planes with 20mm high-rate cannon need support direction NOW by voice, not by slow-speed morse from a specialist weenie in the back whose added weight means less cannon ammunition on board.

The notion of "being behind enemy lines tapping out intel info by morse on an HF radio" is romantic nonsense good only for old movies. HF radio and relatively slow-rate morse is a dead give-away of their position for even the simplest of enemy DF gear. The romantic hero might get one message out, then he is spotted, tagged, triangulated and dead meat a few minutes after that. What is really used behind lines as far back as the Gulf War of '91 was a UHF set sending data text at 1200 WPM to a loitering Joint Stars relay aircraft using a directional antenna (back then an AN/PSC-3, now phased out by the PSC-5). Essentially QRP, the direction-finding is hindered by a directional antenna beam pointed away towards friendly lines...not the omnidirectional HF wire-string antenna pattern.

When the information medium to some is solely from motion pictures and action books without pictures, it is hard to make them understand what military communications really is or how it is used.

:
: Ummmm. Hans, the big problem you face with all that lengthy roll is
simply
: that there no longer exists any such thing as a Navy radio operator:

If the Navy has no radio operators, you'd kinda wonder why they have an 82-week training course for radio operators? This is just one of DOZENS of Navy radio operator training courses in the current CNET (Chief of Naval Education and Training) online catalog.

Sunuvagun!

TITLE: TRANSMISSION SYSTEMS TECHNICIAN
STATUS: A
STATUS DATE: 10/10/2001
DATA CURRENT AS OF: 12/5/2002
COURSE LENGTH: 82 WEEKS
COURSE SECURITY: SECRET
TYPE COURSE: C1 ENLISTED NEC
SKILL AWARD: NEC 2379 TRANSMISSION SYSTEM TECHNICIAN EFF DATE: 10-OCT-2001

PURPOSE: To provide the Information Systems Technician (IT) with the knowledge and skills required to operate communication equipment in the High Frequency/Ultra High Frequency Operator (a-260-0059), Extremely High Frequency/Automated Digital Network System Operator (A-260-0058), and Super High Frequency Operator (A-260-0060) courses.

SCOPE: Provide students with the knowledge and skill to perform operations, circuit monitoring, fault isolation and circuit restoration of external communications suites in the HF, VHF, UHF, EHF, and SHF frequency spectrum afloat and ashore. Topics include: RF transmission, Input/Output devices, Cryptographic devices, Interface equipment, Patch Panels, Multiplexers, Modulators/Demodulators (Modems), HF transmitters, receivers, couplers and antennas, VHF, UHF, SHF and EHF transceivers and antennas and ADNS.

PREREQUISITES: OTHER=Must meet minimum physical readiness standards. and

PAYGRADE=E4 and RATE=IT and

SECURITY CLEARANCE=SECRET
TRAINING PROGRAM COORDINATOR (TPC): N7511
RESOURCE SPONSOR: N6
TRAINING PROGRAM MANAGER: N7511

>btw this the last post i will to this thread as i will ignore it in
>future and i will be not leaving valid emailadesses in my posts to
>save space in my email in box

Why, Markie? Do you think that because you don't put it there that no one remembers your "kb9rqz@yahoo.com" address...?!?!

>lie i never diend it i signed it kb9rqz i said i was me when asked
>changing isp's mean your email address changes most of the time.
>indeed in a few months i will likely be changing isp again when i
>move, is that going to make yoiu accuse me again of hiding?

You only acknowledged yor identity AFTER you erroneously added your callsign in the signature line. In that very post you stated you were NOT "the" Mark Morgan. You were busted by your own error.

>it is not for me to forgive but i will point out even you admit to
>presenting inaccurate data in your posts in other words lieing, why
>should you be eblieved when you alege other things, many people wil
>take that as i did furman on the n word in th oj case once i knew he
>was lieing once i took nothing he sai under oath seriously

Why does someone need to be "under oath" to be telling the truth? The truth is truth regardless of any "oaths" to verify it. Does an "oath" make a lie the truth?

>i know it hard for you to understand but somke people follow religions
>other than yours and that you, alegedly, swore an oath to uphold that
>right marine, or rather aleeged marine

Markie, when was the last time I tried to physically restrain you from practicing your "faith"? When was the last time I denied you access to articles of faith, be they written or for ceremonial purposes?

And what is an "aleeged marine"...?!?! Maybe you meant "algeed Marine", as in a Marine who stumbled while disembarking from a landing craft and fell in algee? You certainly can't mean "alleged Marine", as you have the same access to the same agencies that disproved your "service" that can verify mine.

>it is legal to lie. imo it is also moral to lie at time. indeed it
>shows a strengh of charater to lie when called for

"Strengh of charater" to lie...?!?! Whoohoo!

>said i can
>lie for sefldefence futher i state now i may well if i see fit if i
>feel it makes me safer

Then considering the amount of mistruths you have generated in this forum alone, you should feel like you are back in the womb.

>i have lied and i will it is safer that way since you don't know
>exactly what i am or where i am caught never deined it once i was home
>and better able to defend my household. indeed if you had carried
>though with threat it wasn't even me you would have shoot but my dad

First of all, Markie, you were never threatened by me, nor were you in any danger from me, other than lawful civil suit.

Secondly, if I WANTED to harm you, I surely wouldn't announce it or partake in any drama in a public forum before carrying it out.

And lastly, the Marine Corps taught me enough about identifying the correct target that your father would have never been in any danger had I wanted to hurt you. I know what you look like, and you foolishly leave a plethora of clues as to your residence, whereabouts and movements as to make it easy for anyone to target you. That's YOUR mistake, Mark, not any effort on MY part!

>i can take anyaction
>in defense of such a threat if depnds me, just i can't walk up an
>shoot you but if you fire a 22 at me, even if you deliberatly miss, i
>can reply with a 306 rifle and kill if i feel threatened

If I "deliberatly" miss...?!?! Why in the world would I do that?

And I seriously doubt that you could get the correct end of the weapon aimed in the correct direction to effect an effective defense.

>not ture Stevie
> bedsides a col or ltc is a feild grade officer not company grade,

Oooops! I let Markie get one right! 2LT through Captain is Company Grade. My bust!

>sorry stevei but people can change thier names if they like

Not if it's for the purpose of evading justice which your child support claim would seem to make you. (Yes, Markie, you HAVE claimed you were avoiding your ex for child support)

>>>never said anything bout schild support, although she would like to
>>>find for simple violoence posiiblly i chose the safer route
>>
>> Oh really, Markie, please don't start making MORE assertions that are

>

>look it never said child support

Yes..it did.

>>Yes, Markie, if a bi, gay or lesbian person verbalizes their sexual
>>preferences or activities, it DOES affect their ability to serve in the
>Armed
>>Forces. Had you ever REALLY been in the Armed Forces, you'd know this.
>
>you keep geting it half right activities are different from
>preferences and where and when you said it. indeed i can also lie
>about such interests a solder can walk into a gay bar if he or she
>chooses check your facts

My facts are fine, Markie. YOU keep forgetting that I spent a part of my life with REAL veterans...I am quite aware of the difference between one's "interest" in particular behaviour, "participation" in that behaviour and "avowing" preference in that lifestyle.

No...it is not illegal for a service person to walk into an establishment frequented by or catering to persons who are gay. It IS illegal for them to enter that facility and then engage in same sex dating.

>>Let's see...you LIE about being an officer in the Armed Forces, and
>THAT
>>is supposed to deter someone from trying to kill you.?!?!?!?
>
>it shut you up for 3-4 days as i recall whcih as i recall gave me time
>to get home from the trip i was on

Suuuuuuure it did, Markie! Suuuuuuure it did!

Thanks for the laughs...again!

I doubt that kim's callsign will take the ARS any closer to
extinction, it is just that some people have no sense of good
taste and what is appropriate and what isn't.

>i get it you have no answer to my points you attack me personaly it
>obvious and i belive helpful to the nocode side, so i help you do it
>by taking the path of leat resistance

(Nope...he DOESN'T get it....)

What points, Markie? You haven't made any, save to say that Morse Code testing and use are killing Amateur Radio.

That, however, is unfounded as Amateur Radio continues to thrive.

>>Nothing is "out of context", Mark.
>
>yes it is when you crop out what subect and everything that froms the
>context it is out of context

If I need to "requote" something more than one or two posts back, then YOU are the one with the problem, Markie. I followed it fine. What's YOUR problem?

>>I don't think YOU understand what you wrote!
>
>then you are an idoit. i know what i wrote. even IF and i say IF no
>one esle does

Again with the "idoit" insult by somone to idiotic to spell it right.

>> Regardless of WHOSE English it is, Markie, you are incompetent in it's
>>use.
>
>prehaps perhaps i just don't see this as impotant enough to bother
>with

I wouldn't expect a functionally illiterate person to be concerned with the proper use of English, ergo...NO surprise.

>>I am not "harrassing" you "off" the NG, Mark. I have not CC'ed anything
>to
>>you that was not in tis forum too.
>
>that is the harrasment you idot it then takes up space in my inbox

>that is a service denieal attack

Mark, a FREE Yahoo mailbox allows you 6 MEGAbytes of box space. I seriously doubt that these e mails are sufficient to get Yahoo to block any other e mail coming to you.

No one has denied you anything. YOU deny yourself the opportunity to be taken seriously by not taking the time and effort to use a spellchecker and by expressing yourself honestly.

>>Markie, why don't you spend an hour hanging outside an elementary
>school
>>and get a third grader to explain to you what's so funny about that

Nonsense, dickiebird. That title was renamed to fit the times.
The United States Navy STILL has many skilled radio operators
but you've forgotten that "operating a radio" NO LONGER
REQUIRES being skilled in morse code sending-receiving.
The radios are still there and the skilled operators are still
there...they just don't use or need morse code skills.

Please tell us your amazing stories in operating US Army
radios when you were in...did you "work behind enemy lines
tapping out intel info by morse?" Just what DID you do in
the US Army?

>
>Read that as "MOSS 281.6. Widget, Rear, Repeater Babysitter", 1 ea.

Poor baby...all upset at something, are you? :-)

The civilian General Electric radio relay set (dubbed AN/FRC-23) was six racks of seven foot height and used about 360 tubes to carry 24 voice channels. As a maintenance and operations supervisor (the ".6" in the old MOS) I had charge of 9 of them. Four terminals were the only link to the transmitter site at Camp Tomlinson in Kashiwa. No landlines to there in '55-'56.

Prior to that I was a team leader-NCO at the ADA transmitter site where there were 43 HF transmitters ranging from 1 to 40 KW output. "Rear area?" I suppose...the truce period of the Korean War went into effect in July, 1953...and it's still in force, the Korean War NEVER settled to this day.

In the 1950s only one in seven US Army soldiers were ever "in the front lines" in the world. The Vietnam War rather proved that ANYONE in a "rear area" could be involved in combat.

How did you make out "in-country," ace? Oh, that's RIGHT, you never served...I'm so sorry. You only want to shoot at veterans of the US military. Today. Make you feel good and patriotic to do that?

How many HF transmitters were YOU ever responsible for, military, civilian, or otherwise? Answer quick..."the world wonders." :-)

>>I<< never refuted WHAT..??? The CONTEXT of the statement, Markie, was that YOU made claims of being a commissioned oficer in the Armed Forces. THAT was easily refuted by a 30 minute phone call to Waashington, D.C. You lied, pure and simple.

Furthermore, you were never threatened by me, ergo I could not "dishoonor" any oath I took while in the Marine Corps. And in any case, I was relieved of that oath when I rejoined the civilian community. The only on-going "oath" I have from the Armed Forces were related to written secrecy caveats that specifically bind me, legally, until 2030.

>thank you i do think you migh be tryiong to be gracious there but i

Len, just stop it with the facts. They're not going to get you anywhere.

Go learn the Morse (/Farnsworth) Code, pick up ice cubes with your buttock cheeks, and when whacked with a Titanic Lifeboat Oar, say, "Thank you, Sir. May I have another."

Or something like that

Yes, I passed the Extra written exam.

Ahem, Mr VE Expert, are you saying that Bruce received no CSCE froom the VE's for passing Extra? Are you saying that the VE team didn't pass anything to the FCC?

And, of course, you believe the 1) on a bet, 2) without studying, 3) no lucky guessing, 4) without error, 5) in 8 minutes, 6) took $250 from two CB-Plussers, and now 7) could have done it at age 4.

No doubt about it, the PCTA Double Standard is going strong.

> > Since you're the only one who ventured forth as a VE expert in another

Even more so hanging on to the Morse (really Farnsworth) examining requirement.

Why demand to be archaic?

They change, I'm sure. I was a radioman in the US Navy in the late 60s so it might well have changed from the 50s. A civil service test I took about 8 years ago had the phonetic alphabets as I listed them (scored 100%, no veteran's points). Fortunately, I got back in with my old employer. Unfortunately, now my employer is shipping all manufacturing to China. Fortunately, not all jobs are going at once. Unfortunately, my plant is being closed next year. Fortunately, I am in a position to retire with health care, insurance, and pension. Unfortunately I'm getting dizzy with all of this ...
The reality of this (at least to me) is that if a lot of phonetic spelling is necessary (such as unfamiliar surnames, street names, etc), it would be better to use digital means to transmit the information.

Sure looks to me like they deal with "information systems", not radios.

Same type of thing happened where I spent a career. I hired on as a radio operator, and a part of the job was to actually tune up and service radio systems, as well as operate them in the normal routine of service to the system users. A First Class or Second Class Commercial Radio Operators license was as job requirement.

As time passed and the computer age integrated into the operation, the job changed to where the only radio done by the same category of people was to press a PTT and speak into a microphone. I guess you can call that operating radio if you want. MUCH more of the job deals with computers and their job related applications. Accordingly the job title also changed - most of those people are also known as Telecommunicators, and though a FCC GROL is considered desirable, few employees who hold that license have the skills to actually put it to use. There is a question pool for that test also, you know. Operations and engineering have separated. I doubt the New Navy situation will be substantially different

Dick

I knew lots of guys like Len during my time in the Air Force. Usually
they spent their time leaning against one of the racks while
entertaining (with looooong, windy stories) those trying to get some
work done.

I check in here once every 5 years...it's enough. Same old people hashing
the same old thing. -

FWIW, if Herb (KV4FZ) is back on the air, it's good news for those who enjoy
low band DX'ing. The guy's accomplishments on 160 are, by anybody's
standard, remarkable-- especially when you consider that he did it all from
the noisy Caribbean.

Waah, shucks, I ken answer that one EZ!
For the past continuous 46 years I've been responsible for a long list of "civilian" transmitters, all of which belonged to me and which I kept at my residence, and operated when I decided. As a sideline I also was "responsible" for quite a number of transmitters belonging to various governmental bodies and several broadcast stations of various styles, frequencies and power output levels, some as part of my everyday job, some as a contract engineer and others on an as-needed basis. Poor ol Putz, on the other hand, was left hanging when his military ETS rolled around. He had no more transmitters to babysit, much less operate.

No wonder he hangs out here, the sad result of a budding beginner's career in radio transmitting cut short.

You're obviously STILL cornfused, Confucius. Bruce's Extra shows up in the FCC database, lending credibility to his story, whatever
the details. Yours does not, and remains just as vaporous as your official permission for your alleged Somalia operation.
When it comes to credibility, RAP certainly isn't the only venue that values documentation. But you SHOULD have already known that.

Kim:

I don't agree with Riley (that's MISTER Hollingsworth to you!) because he's an authority -- I agree with him because he's saying exactly the same things I would be saying under similar circumstances. However, in this case, he IS an authority, and his words carry weight. You are a person who should NEVER disagree with authority, because of your proven track record of making wrong decisions.

BTW, our forefathers, in their disagreement with the Crown of England, came over and started their own country, where they could run things in a manner which was more to their own liking. Please feel free to leave the United States and do likewise. However, while you remain a U.S. citizen and a licensee in the U.S. Amateur Radio Service, I'll thank you not to continue to create a demeaning and unwholesome atmosphere in our family-oriented service with your selfish, provocative, suggestive Vanity call sign.

So, Larry, what was Riley's opinion of you wanting to sell off two
meters and 440 to the cordless phone people? Did he think your
rantings about "welfare mothers of color with their hands out" was a
proper representation of the Technician class licensees?

Then there was the "Knuckle dragging 4-lander with a Southern accent"
you so often referred to. I'm thinking Riley has a 4 area call.
Lemme check, K4ZDH. Yep. Is Riley a knuckle dragging 4-lander with a
Southern accent? Would you say it to his face? Would that bring
-you- one step closer to extinction?

Oh well, I'm probably kill-filed.

But before I go, do you recall what you said about your "favorite
Black on the bus?"

It's in the archives.

That's good advice for anyone, Hans. But if you start giving that advice here every time it's needed, you won't have time to do much else!

>Obviously
>you don't understand military communications systems.

I don't claim to. What I DO understand is that the concept of a skilled radio operator manually sending and receiving radio messages while using manually-operated radio equipment is pretty much a thing of the past in most modern militaries.

>By the way, the term "Radioman" was changed to reflect the fact that Navy
>communicators are responsible for establishing, maintaining, and grooming

Likewise to you, Larry, because I'm not going anywhere. I appreciate the fact that my forefathers gave me the right to choose whatever callsign I wish under the licensure system as administrated by the FCC. Talk to the FCC if you're so shook up--*THAT* is where your whining *might* do you some good.

Possibly. But the change took place before Ike was inaugurated in January of
53.

>The years during and following WWII saw radiotelephone come
>into technological maturity (as did SSB a decade later, as
>Bill Sohl pointed out) and one no longer had to be a
>"radio genius" to put a 'phone rig on the air on any amateur
>band.

That was true in the late '30s. And it still took quite a bit of knowledge to
put a 'phone rig with a good quality signal on the air in 1952.

>It was at least technically possible to expand the
>privileges. And ham radio had shown itself to be a "Good
>Thing" during WWII and so, perhaps, deserving of government-
>policy encouragement and growth.

Part of that Good Thing, however, was that hams knew code and theory already,
and needed less training than raw recruits.

I think the biggest driving force behind the FCC's sudden change of heart was
the desire to get hams using and working on SSB. The original 1951
restructuring would have reduced the flow of new hams to HF 'phone, because it
would have required post-Jan 1 1953 hams to get Extras in order to use HF phone

on the bands between 2 and 25 MHz. Less crowding, fewer 'phone hams, less need for SSB and fewer hams working on it.

Open up those bands to Generals and Conditionals, and there would be enough crowding to push SSB use by hams.

If it happens at all.

--

So let's be proactive. Suppose S25.5 goes away next year, and FCC decides to dump Element 1. What else should FCC change in the ham license structure?

Off by about a decade. But they took over for a whole bunch of reasons.

>But I'll stick with my assertion about pre-packaged 9 MHz
>crystal filters being one of the enabling technologies
>for low-cost SSB transceivers.

Trouble is, the facts disprove it. None of the lowcost SSB transceivers used 9
MHz filters. And the real cheapies (Eico 753, HW12/22/32) used discrete-xtal
filters, not prepackaged ones.

But you've got the basic idea. Phasing really took off with the introduction of
packaged audio phasing networks like the B&W 2Q4/350 (there were others).
Filter took off with the development of lowcost xtal filters in the HF range.

I'm afraid you have it sideways, Hans. Folks complain about bad ideas. They also complain about good ideas. They also praise bad ideas as well as good ideas.

The mere fact that some folks complain about something doesn;t mean it was a bad idea. Nor a good one.
>

That's me, all right. Imagine such ideas! Things like "equality of rights does not mean equality of results" and "the Bill of Rights would have been accompanied by a Bill of Responsibilities, but the founders thought the responsibilities were so obvious that they didn't need to be elaborated".

The important question: Is a particular class structure good or bad?

None over 2 KW output legally...and no broadcasting of any
kind, legally...and only on HF bands which represent less
than 2 percent of the total spectrum allocated to US radio
amateurs.

>As a sideline I also was "responsible" for
>quite a number of transmitters belonging to various governmental bodies and

"Various governmental bodies" = State of Missouri.

>Poor ol Putz, on the other hand, was left hanging when his
>military ETS rolled around. He had no more transmitters to babysit, much less
>operate.

What is dickiebird twittering about now? "ETS?" "No more
transmitters?!?" I'm on file with WBEL (5 KW) as working
there in 1956, also WREX-TV (5 KW visual transmitter) the
same year. Two others also, but only 1 KW and 500 Watts
each...all broadcasting...except the VHF remote Tx at WRRR
converted from a military unit (FCC inspected and certified).

> No wonder he hangs out here, the sad result of a budding beginner's career
>in radio transmitting cut short.

Dickiebird twittering off-key again. I wasn't looking to be
forever in broadcasting 46 years ago, just trying to get some

money back then. Got the money, later got a lot more from real, live engineering in radio and electronics from EOS, a division of Xerox, RCA Corporation (maybe you've heard of them once?), Hughes Aircraft Company (they made electronics, Hughes Tool Company made aircraft...helicopters), Teledyne Electronics, and Rockwell International.

Ever communicate with a station ON the moon, dickiebird? I have. Legally. You can't. All you can do is read about how amateurs use the moon as a reflector. Distance to the moon is a quarter million miles, longer than the longest terrestrial DX path. Ever get above the 1200 MHz band, dickie? I've designed, tested, and used microwave equipment well over that, all the way up to 18 GHz. Ever work below MF, dickie? I've done that in design and test. Ever make a 3 KW coaxial oscillator at 500 MHz for some sensitive project? What PLMRS radio bands did you "contract out" to "be responsible for?" I've been co-owner of such a radio. Ever operate VHF, transpond or DME at L-band, get VOR on VHF all at the same time while IN the cockpit of an aircraft in flight?

You've done more than that by keying morse following standards and practices of the 1930s and thus "pioneering HF" by working DX only on HF in the 1980s? Wow, real technical wizard, Mr. EZ.

Read up on all those 60m "pioneers" and their recent "break-throughs," Mr. EZ, you might learn something about raddio and propagation that wasn't pre-canned by the VEC QPC for tests that you once proctored.

Wasn't your REAL Army MOS equivalent to today's "eleven-charlie?"

>>>> >Harrison Bergeron?
>>>
>>>Well?
>>
>>can't answer the question i don't know who Harrison Bergeron is.
>
>Look it up.

No need. "Harrison Bergeron" is a FICTIONAL creation of Kurt Vonnegut, a fiction novelist NOT in mainstream US science-fiction. Fiction doesn't serve as a baseline for physics or legislated law on radio communications.

Neither does Ayn Rand's fictional works have any bearing on radio, much less amateur radio. Neither does some 60's TV show imported from Britain ("Monty Python") because WGBH needs to fill in their PBS schedules with something. Neither does some late Brit's fantasy FICTION about fish thanks and hitchhiking across space...there is better fiction out there in science fiction land than what a few anglophile critics suckered you into buying.

Electrons, fields, and waves don't much give a snit on FICTIONAL ideas in or about radio. Electrons, fields, and waves don't take to fantasy or some mythical "powers" held by "the first communications mode in radio" or the edicts from Newington or the "supreme skill in hamdom," morse code. You meet physical reality on reality's terms. Using novelists, fiction writers as "defining humans" in anything but fiction publishing is bogus, false, nonsense.

Is US amateur radio some creation of Kurt Vonnegut?!?

Were the sirens on Titan too loud for your comprehension?

...from jobs that never allowed you to operate on any channels except the discreet channels they were licensed for.

VERY unimpressive.

>Ever communicate with a station ON the moon, dickiebird?
> I have. Legally.

No Lennie, you did not "communicate" with a station on the moon. You may have remotely commanded a telemetery unit there, but you did not "communicate with a station" on the moon.

>Ever operate VHF, transpond or
> DME at L-band, get VOR on VHF all at the same time while IN
> the cockpit of an aircraft in flight?

Have you, Lennie? I do not see you name in the FAA database. I, on the otherhand, have operated UHF-AM mil airband, lo-band VHF, TACAN, IFF, >>AND<< HF-SSB airmobile while airborne...On the same flight...In a HELICOPTER....of course that was as CREW.

I have also operated civil VHF-air, ADF, VHF-VOR, VHF-FM and air-to-ground datalink and video WHILE flying the aircraft with CAP on disaster relief and SAR missions. You WILL find me in the FAA database. Active, by the way. You will find my current flight medical on the database too.

Please, Lennie...You have told us of all your OTHER exploits, please enlighten us as to your prowess as an aviator.

I am waiting with bated breath...

There's a bit of truth in the legend, though. Sometimes hams made up phonetics
that effectively hid the actual call. FCC would sometimes cite for that. But
the use of nonstandard phonetics was OK if the call was still clear.

The standard battlefield "radio" of today is more the functional equivalent of a cellphone. The commander dials up whatever subordinate with whom he needs to converse. No doubt there are skills involved in using that device, however you do stretch things a bit by regarding him as a skilled radio operator. Skilled cellphone operator, maybe. It does require an engineering/maintenance staff to keep the system running. If you prefer to call that staff "skilled radio operators" that would be your privilege.
At the squad level the communications gear is built into the helmet and operates VOX as needed. I suppose that's skilled, also. No doubt there's an on'/off switch to learn about.
I'm not current on modern Navy technique -shucks, they may still even have some HF gear still that needs a few simple knobs twisted, though the thrust has clearly been toward eliminating the role of radio operator as being another complicating unneeded link in the chain, and toward making the communications system as "transparent" as possible to users, which will significantly reduce the role of any operator. But you did say "military", which covers all branches.

BTW I knew a fella who had been a first class radioman on a submarine who sure was no radio genius. The longer one knew him the more obvious it became that he really hadn't learned much during his service time.

There a big difference between "being responsible" for something that's installed and working, complete with training courses and instruction manuals, and being 100% responsible from inception to operation. Including financing.

That works out to 1957.

What are "code clerks"?

The point I'm trying to make is that dependence on communications systems that require skilled operators actually handle the messages can be a vulnerability and a limitation. Doesn't matter whether they use Morse, Navajo, or ASL, if you lose the operator(s) with the special skills, the communications capability is reduced or eliminated. Most people know how to talk and type.

> Has nothing to do with economy.

Where did I mention economy at all? Perhaps you are comnfusing what I wrote with what others have claimed. For example, I have never claimed to use only ham radio equipment that I designed and built myself.

However, economy is a big factor in commercial operations. And it may be a factor in military comms as well. Simple math: Suppose it costs X dollars to teach Morse code to a radio operator, and Y dollars per hour for that op to handle Z words per hour. And suppose the op is on duty for a total of N hours in his/her military career. Then the cost per word is

C = (Y/Z) + X/(N*Z)

for each end of the communications circuit.

>It's just simply inadequate in terms of speed.

That's ANOTHER big reason....
>
>But skilled radio operators are more important than ever in every military

>modern military.

Are they directly in the path of the messages handled? Or is their job to keep the equipment working so that others can use it?

My radio won't tune down to that low a frequency i.e. 3.865 kHz!
(Three point eight six five kilohertz?)
Maybe it should read 3.865 megahertz? Or perhaps 3865 kilohertz?
After all 3.865 kHz is 3865 hertz and that's in the audible
range; I think?
Just curious?

> that you can pick up a '230 for cheap because the tube costs so much.

And it's not getting any better. The big ceramic-metal tubes do have
one big advantage over 3-500Zs, they will kick out a helluva lot more
output per watt of drive power. Not a trivial consideration.

IF he ever builds the thing he won't blow it up. It's still in the
"807 stage", "Let's get together and do some more 807s and talk about
it again."

> used in Korean DMZ in 1988. Standard VHF shortrange single channel

> voice radio for combat net use (and lots of other uses, obviously).
> Uses frequency hopping SS to achieve security from interception and
> DFing.

Since when did SS get to be "single channel"?? Ya mean it doesn't even
have a channel selector huh?

> Current cost in the $3000 range, according to websites I
> visited. You don't wanna know what they cost in 1988.

Wunnerful. Ya can buy a disposable 150 channel Vertex/Yaesu Pro 5
pocketable airband HT from Sporty's for $289. Less than one cannister
of 30mm ammo costs Sam. The Pro 5 is built to Mil specs, tx/rx on the
comms freqs, rx on the nav and wx freqs etc. Somehow I doubt that
deleting 149 channels and adding SS to the Pro 5 would cost Yaesu
anywhere near the additional $2,711 ITT charges for their widget. One
will get ya ten that ITT and the Pentagon done got together and made
yet one more typical "engineering mountain" out of a molehill. This is
the off-the-wall "Golden Fleece Award radio engineering" world The
Putz comes from. He musta worked on the thing.

> AN/WRC/91A is
> one model. Why SINGCARS should be of interest to hams is a mystery.

Like my Yamaha FM stereo rcvr is a hot ham policy topic. Duh?

> Military did not develop and deploy SINGCARS so folks could have fun
> using radio.

But whatta ya bet they do just that? Been there, seen that, done that
myself actually. Jollies comms with deck-edge USN Gonset Communicators
on the CVA 100, the USS Concrete. Tune around 7.4-7.5Mhz some nite and
dial up the ssb CB-type chatter amongst the USN Atlantic fleet shore
stations.

> Having a skilled operator
> dedicated to radio comms is a weak point in military ops because if
> you lose the op you lose the comms. That's a big reason why Morse use
> by the military is almost completely gone.

I dunno how much of a factor that was but what I do know for absolute
certain is that cw was a "victim" of advancing comms technolgies over
many years which did a better job in all respects. Dead discussion
today.

For the sake of perspective Chuck Yeager & Co. sure as hell
"communicated" and they didn't spend much time beeping when they had
Messerschmitts up their asses.

> To the military and commercial users, radio is but a means to an end.
> To us hams, radio is an end in itself.

Dunno about that.

We're not channelized on HF, we operate over a wide range of freqs with several modes with the same hardware, there's often a lotta weak signal ham work done and the purposes of the comms are quite different from military & commercial comms. And much more often than not we do it for investments which are only a small fraction of certainly what the military pays for the same basic technical results.

Gimmee the $3k Sam pays for one of those SINGCARS things and I'll show ya some RADIO!

Again much more often as not hams don't learn to do it on the taxpayer's dime either, we do it outta our own pockets as a side issue to our lives out in the civilain world. Ditto the equipment. There are obviously enormous differences bordering the infinite between ham & military radio but in the end they're both about communicating. Take the technical aspects outta ham radio and it would prolly still survive in some twisted form. Take the communicating out and there is no ham radio.

> > > Driven by a market that kept demanding better rigs.
> >
> > Ummm . . more like driven by the manufacturers competing for market
> > share.
>
> Of a market that's willing to buy TS-940s and FT-1000s.

"Willing" implies that the choice is 100% optional. Which it is. There are no points given for coming up with a ten-dollar ham station except amongst the rest of the ten-dollar station worshippers.

> > Horsepucky.
>
> How can you SAY that!! The long-time PROFESSIONALS IN RADIO say it
> MUST be so! You are being electropolitically incorrect!

Been that way all my life. Tough beans. If there's one thing I've learned about "professionals" in ham radio it's their coefficient of bullshit.

> > 40-bit extended floating-point processor, 18-bit over-sampling A/D
> > converter, 16-bit D/A converter. Lotta DSP.
> >
> > A pox on it and them when it comes to hamming with it, especially cw.
>
> 'Nudder HRO-500, huh?

No way, it just isn't selective enough for weak signal cw ops for my taste and it's a disappointment in this one respect.

> DSP is cheaper and electropolitically correct. It's NEW, it must be
> BETTER!
> PROFESSIONALS IN RADIO told us so!
>
> Note that my K2 has no DSP. Hmmm.

>
> I dunno about the front end being THAT good.

ARRL tests:
3.5 Mhz BDR = 128 dB.
3.5 Mhz IP3 = 92 dB.
Now ya do know.
Not yer father's Zenith Transoceanic.

Been raved about in The Big Three mags, QST, Passport & World Radio.
It's fer serious.

> Synchronous detector?

Silly boy, of course. Will inject it's own "carrier" to stabilize AM
fading, pick the sideband ya wanna listen to. Or do both and listen to
the AM stereo stations with yer 'puter speakers. All of it DSP
tweakable. CW selectivity "issues" aside the DSP in the thing *really*
cooks when ya get into heterodyne & noise suppression.

Anywho I enjoy tuning the 3Mhz tropical band, the 10-11 Mhz swl band
and the AM BC band for the weak overseas types after midnite when the
U.S. pipsqueaks pull their switches. Goes back to my childhood when
Mom thought I was tucked in for the nite. If there was ever a radio
built for these particular pursuits the 545 is *IT*.

> >

Gotta agree with you wholeheartedly on that one. Folks complain about Nagasaki and Hiroshima--but it was still probably a good idea. By the way, I just watched the end of a movie yesterday that I'll have to look back up. It had Paul Newman in it. Anyway, at the end it was giving textual information on what I guess was the real-life characters in the movie. One of them said that Oppenheimer refused to work on the Super-H bomb. Given my first comments: that Hiroshima and Nagasaki were complained about by some folks but that it was probably a good idea; I really wonder if he (Oppenheimer) felt it was definitely a bad idea. What a situation, huh? To be both a hero and villain at the same time?

Yep, you bet it is. I don't know what the statistics would show--haven't checked it out--but I think I'd be willing to bet that the accident rate has really escalated. I don't know...I just feel a lot better with a DPS cop giving the road test. I mean, he's/she's going to be a lot more sensitive to things that can happen on the road because they are the ones "sending forth" (or not) the driver taking the test.

Yeah, lemmee think--Nick (my youngest) was 16 when all this was going on, so that was around 1992. I haven't been around any teen-agers since then, except for my hubby's kids but we've never talked about it. I'll ask them next time we see them and find out how it was when they were going to school...though that would have been just a few years behind Nick.

Yep, it's definitely scary. Why ya think I turned to driving a nice, high truck? <BIG GRIN> Only thing is, you oughta see a young teen behind the wheel of one of those huge SUVs that Mommy and Daddy have either bought for them or let them borrow!

What truth?

Take a look at the Kurt Vonnegut story "Harrison Bergeron". It can be found in the short story collection "Welcome To The Monkey House". Your local library should have it. Highly recommended.

Source record: 57353

From the Elecraft reflector, thanks to N5IB:

Louisiana Naval War Memorial
Baton Rouge LA

USS Kidd, DD-661, was named for Rear Admiral Isaac Campbell Kidd, killed in action on 7 December 1941 aboard his flagship USS Arizona. He was posthumously awarded the Medal of Honor for his gallantry under fire that day.

In commemoration, W5KID, aboard USS Kidd, DD-661, will be on the air with two stations, possibly a third, Saturday Dec 7, from about 1500Z until 2300Z. Probably mostly 20 m ssb, 10 m ssb if that band is open, 15 m ssb, potentially some 40 m and 30 m CW. Just above the lower edge of the general phone bands and near the QRP watering holes for CW. TenTec Jupiter and K2 #1233 should see service.

QSL information on the QRZ.COM listing for W5KID

...lest we forget...

>
>Hey, yeah, I remember that song came out when I was a wee little girl, and I
>recall liking it a lot... now who did it? Shoot, I can't recall.

That's another twist in the game. Recall a song then ask what year it came out, who sang it, who wrote it, what other versions exist. Drives 'em crazy.

>Another
>song I recalled liking from that same time period was "Horse With No Name"
>by America. I would not even have been in the double-digits in age yet... :)

Dave Barry on that song:

"You're in the DESERT. There's NOTHING to do. NAME THE FREAKIN' HORSE!!!"

Variants of the Bad Song thing:

1) Identify stupid song lyrics

"All the redemption I can offer, girl, is beneath this dirty hood"

2) Various permutations of TV theme songs

--

There's also The Movie Game:

Imagine that someone is interested in making a movie/TV series/documentary/whatever about someone you know. What actors (past or present) would play the various roles?

--

>Back from the local radio store, finally having decided what to buy for
>myself for Christmas.

I wonder why "they"(?) didn't do a Special Event callsign--or is W5KID a Special Event callsign? My slow computer is trying to get to QRZ as I write this, but I ain't waitin' around all mornin'! Anyway, I wonder why the call K5IDD wasn't used. Aw shucks, my firewall and network and all is messing up, so I can't get to QRZ.

ROTFL. Gotta love Dave Barry!

> >Back from the local radio store, finally having decided what to buy for
> >myself for Christmas.
> >
> Which is?

I bought a 2 meter/70 cm FT-90R, power supply, SWR meter, and an antenna...
I'm putting it all up today. The little radio is only about 5" x 5" square.
Teensy and just perfect for the tiny table I have to put it on.

The HF rig I want (which I have not bought yet) is the IC-718. I plan to
pick one of these up before the end of the year. Hopefully I will have
passed the code exam sometime in January, then I can start using at least
some of the HF bands.

I have a problematic situation in my yard where large antennas are
concerned. Too many trees and powerlines near my house, as well as no
ability to put a large antenna up on my roof, leave me to believe that I'll
need to use a well-tuned long wire that's attached to my roofline somehow. A
friend of mine actually modified his friend's steel gutters and they were
able to use them as an antenna- guess it worked very well too. But that is
something I don't know enough about to attempt myself!

>Kim W5TIT

You may have a "legal" right to choose a call sign which is harmful to the image of the ARS, but you have no moral right to do so. One of the natural consequences of living in a country with great personal freedom is that people such as yourself have the freedom to make public spectacles out of yourselves. That's OK, as long as you're willing to accept the consequences of your actions. One of the consequences you're going to have to accept is the condemnation of ham radio operators who do not appreciate your foolish expression of your self-serving imposition of a sexually-suggestive call sign in what is widely regarded as a family-oriented hobbyist radio service. Anyone hearing it would not draw the conclusion that this is a wholesome activity for young people, but rather, just another extension of our permissive popular culture. Don't look now, but the last election has shown that America is rejecting the immaturity and immorality of the '60's liberals. YOU are an anachronism.

I've always said that I thought you had it in you to change, and prove that you're not the idiot we all think you are. I guess I'm wrong about that. Sorry
to have to say it. I'm just glad I'm not you!

73 de Larry, K3LT

And, what ya gonna do, Larry, if I misbehave? I join in those who can share
in the adult prerogative of referring to Riley as Riley, because I can and
will. Ya see? I haven't "proven" a thing to you, Larry, nor do I have to.
You're so funny.

I just sat here and shrugged my shoulders. Sure I am in a position to have
an opinion on whether the ARS is going to be extinct or not. Everyone is.
And, it's not, in my opinion. In fact, it's doing quite well.

At least you recognize that. And, it is your perfect right to believe it is
a public spectacle I make of myself, Larry. However, I'd remind you that it
takes many kinds to make up a world. My kind, your kind, all kinds. I
think that's a concept that you actually have a problem with.

>
> That's OK, as long as you're willing to accept the consequences
> of your actions.

>

Oh, I forgot that you think I have a real problem with your
condemnation...you really seem to like the idea that some opinion you'd have
of me would be something I'd be concerned with. Larry, condemn away...you
have such a good time at it. Is that "acceptance" enough for you? If I
were rich, I'd start you a club and fund it myself...but I'm not that rich.
I support, fully, your condemnation of my callsign!

>
> Anyone hearing it would not draw the conclusion that this is a
> wholesome activity for young people, but rather, just another extension of
> our permissive popular culture.
>

And, perhaps you should realize that if someone sees my callsign as vulgar
it is because of their own propensity for "dirty" things. What *is* so
vulgar about breasts, Larry? And, if there's a kid out there who "has a
problem with" my callsign I daresay it's not because I taught him/her it was
dirty: it was someone like *YOU*. There's nothing vulgar or dirty at all
about the callsign W5TIT. There's nothing dirty or vulgar at all about
tits, or dicks, or asses, Larry. If you wish to portend to be puritanical
about your approach to sex and sexual things, that is--as you like to
say--your prerogative. I, however, do not. And many do not.

>
> Don't look now, but the last election has

Oh, wait, an idiot calling me an idiot. Not that!! I just don't know how
to respond to that, Larry. Like I've always said, welcome to your own
grandeur because it sure is no one else's. Oh, and, ROFLMAO...I am sure

glad you're not me also.

Hanging a morality hat on Washington, DC. Jeeze, Larry, you can do better than that, can't you?

I think it is a club/event call.

Maybe it's already held. Or maybe they thought splitting the name "Kidd" made
it less recognizable than dropping the second D.

I think the best special event call for that station would be K1DD.

Here's the bottom line;
It's her right under our vanity call system to have that call sign if she
wants it. It's also our right under the same system NOT to have a
callsign like her's "ae" the naming of body parts or other risqu&#65533; things.

The thing is if you or I or anyone else doesn't "approve" of her call,
we don't have to call for her on the radio and talk now do we? We
are free just to ignore her or anyone else because that is OUR
freedom as well.

I am a B.A.C. and a church elder locally and I'm not comfortable
with her callsign either but it's her's and I'm not the one who is
going to "judge" whether or not she should have had it or not, HE is!

You're right. My writing "Whoopie" makes you an Extra no more than your
writing that you "passed the Extra". You were not awarded an Extra
Class ticket for passing part of the exam.

Look on the bright side though: You got way closer to achieving it than
Leonard H.

Yes...irresponsibility in military communications can result in death
of yourself and comrades...or failure to destroy an enemy. Are
those small things below the exhalted level of radio amateurism?

Irresponsibility in civilian commercial communications seldom results
in more than a termination of wages (necessary to maintain life)...
although severe irresponsibility can result in imprisonment and fines.
Again, small things below radio amateurism?

Mr. N2EY wants to dismiss/denigrate other radio activities in
attempting to "compare" occupations with avocations. He is so
biased in that operation that there are no letters left in the alphabet
to classify that bias.

>operators" that would be your privilege.

Hans was talking about NAVY radio operators, dickiebird. He was talking
about radio operators who operate radios, NOT morse keys.

If you want to talk about land battlefield radio operations, go ahead and
download FM 24-24 and see just how many 1994 signal devices are
"functional equivalents of cellphones." [it's a public release, even linked
on at least two ham websites]

Modern battlefield radios (including air and sea battlefields) have built-in
test features and the flexibility to operate in different configurations,
changeable in the field.

Civilian cellular telephones MUST have nearby cell sites to work. Those
don't exist in any battlefield...except when military people go out in the
field and put them there, antennas and all...without getting destroyed in
the process.

> At the squad level the communications gear is built into the helmet and
>operates VOX as needed.

Oh? Is that "standard" in today's Army, dickiebird? Or did you read
of it in Popular Electronics or a Tom Clancy novel and believe it the
"truth?" Go and read some more on the "radio built into a helmet" from
real, actual sources from the people who do military communicating.

The "helmet radio" concept failed field testing two decades ago despite
the Wonder PR press plugging going on in print media. The old H-33
handset fit nicely under the old metal helmet back in the Korean War
era of half a century ago and its offspring (relatively unchanged) work
just fine with the new fritz helmet. The earphone is loud enough (with

present audio output) to hear a call when it is clipped to a pack strap
by a shoulder. Still press-to-talk on the handset, too.

But...you've never been IN any field using small-unit Army radios, have
you? All you've done is read some PR pieces in newsy civilian press.

>I suppose that's skilled, also. No doubt there's an on'/off switch to learn
about.

There's a lot more...but I doubt you know the difference between a
hopset and Hop Sing (of Bonanza) on an AN/PRC-119. You could
download a graphics training aid on the controls...there's two of them,
one from Army signal school at Fort Gordon, another designed by
the USMC, both of them available through the Gordon site for the
last three years. A bit more than an "on/off switch."

> I'm not current on modern Navy technique -shucks, they may still even have
some
>HF gear still that needs a few simple knobs twisted, though the thrust has
>clearly been toward eliminating the role of radio operator as being another
>complicating unneeded link in the chain, and toward making the communications
>system as "transparent" as possible to users, which will significantly reduce
>the role of any operator. But you did say "military", which covers all
branches.

Want to see what a modern radio room on a USN missle submarine
as of 1995? Go to the site of the Federation of American Scientists
and see drawings of the layout with descriptive data, all reproduced
from USN documents. A LOT more than just "on/off swtiches."

No morse keys on Trident boomers. No morse keys on hunter-
killer subs, either. Warcraft aren't designed for hobby use, to have
fun in DX contests, or places to twist knobs without knowing fully
what those knobs do. ALL the military has one primary purpose,
that of destroying an enemy before the enemy destroys us.

There's NO hobby aspect to the military, NO room for casual fun
handling huge warships, supersonic aircraft, or guns/artillery that
can destroy thousands in a single firing. Errors in communications
can kill friendlies so the tools of warfare are designed, doctrined,
implemented to minimize errors as much as possible.

There's NO room for morsemen of the past century in military
communications of today. None. They made too many mistakes
and took too long to communicate in older days, required time-
consuming controls and checks to authenticate, needed too much
training from humans selected for that aptitude.

> BTW I knew a fella who had been a first class radioman on a submarine who
sure
>was no radio genius. The longer one knew him the more obvious it became that
he
>really hadn't learned much during his service time.

I've seen the outpourings of extra super-special class radio amateurs in here who clearly aren't even journey-man class metalities about radio, even after three to four decades as amateurs. They haven't learned much of anything except what ARRL spoon-feeds them in QST along with propaganda and mythology of morse.

My nephew was an electrician rating on a USN hunter-killer sub handling nuke power plant stuff. Not a "genius" but damn smart and a willingness to work, use his brain, and get jobs done. Did he pull snakes through conduit to wire houses? No. Submariners need a lot more skills than replacing light switches or bulbs. Nephew got married, left the USN, became an electrical power broker while living in a very up-scale suburb of Minneapolis. He didn't need to JUST know about "on/off switches" while in the USN...or in civilian life.

Having never been in combat (by virtue of NOT having been awarded the Combat Infantry badge), how would you know? Rear Arew Widget Warstory Telling 101...???

>Irresponsibility in civilian commercial communications seldom results
> in more than a termination of wages (necessary to maintain life)...(SNIP)

Necessary to maintain lifeSTYLE, perhaps, but NOT necessary to maintain LIFE.

>..(UNSNIP)...although severe irresponsibility can result in imprisonment and fines.
> Again, small things below radio amateurism?

Hardly, since citizens have recently had to face prison for being too stupid to follow the few rules that are imposed on Amateur Radio.

>Mr. N2EY...(SNIP)

Jim Miccolis still continues to refer to Lennie as "Len" or "Leonard", yet Lennie continues to efer to Jim as anything BUT "Jim". Of course Lennie the Liar (excuse me...Lennie the Pathological Liar) has repeatedly said words to the effect that he only treats those who treat him in a certain way with certain responses. Of course "rules" are for everyone EXCEPT the Grand High Exhalted Liar.

One more reason to NOT let your babies grow up to be "proferssional radio engineers".

>...wants to dismiss/denigrate other radio activities in
> attempting to "compare" occupations with avocations.

Of course this is interesting...coming from a guy who tries to make himself look noble by associating himself with Soldiers who died in combat 3 years before he was "in-theater".

>He is so
> biased in that operation that there are no letters left in the alphabet
> to classify that bias.

As opposed to the bias YOU demonstrate against those who have what you covet, yet denigrate due to your OWN incompetence?

Whew, Lennie...Heavy stuff for such a loser.......

> I am not making this up.

... you SWEAR you are not making this up...?! :-) So what's your favorite Dave Barry book then? I have several; I've never been able to choose between 'em. They are all gut-achingly hilarious. I don't think it's possible for that man to NOT be funny.

> COOL!

Unfortunately, I ran out of daylight before I got the antenna on my roof-- I had some problems with the soldering gun. Had to go to the hardware store and buy a new one. By the time I got home there was only about 45 minutes of daylight left to get everything up there and hooked up. So it'll be tomorrow before I have the whole thing up and running.

> Only thing about those "pack of smokes" rigs is ya hafta be careful not to
> leave 'em in a shirt pocket. They don't like being run through the wash.

Er, yeah!! Good advice.

> Nice lil' rig. I dunno what the price difference is or the size of your
radio
> piggybank, but you might consider a look at the new FT-897.

I have considered that one too, but I've not seen one up close yet. It's not so much the money that's the issue really, the IC-718 has all the goodies I want and it appears to be a good rig for beginners like myself, but one that I can have for a long time. Do you have the FT-897? If so, do you like it?

> How's the code learning going, btw?

I'm actually surprised by how quickly I've picked it up. I have heard that it's easier for people to learn code if they know how to play a musical instrument, which I do. I am at stage now where I'm just building up some speed. I've learned all the letters, #'s and prosigns that were given on the CD's, and now it's just practicing. I think I'll be able to pass the code test in about another few weeks or so, but I've decided to wait until after New Years to take the exam. I still cannot practice daily, but I seem to be retaining what I've learned.

> Possibilities:
>
> - Attic dipole or wire

We just have a crawlspace... a wire strung somewhere around the house or roof might work. I may have to get clever in how I hook it up to the house.

> - Horizontal loop around the house or yard

This is the way I'm leaning.

> - Vertical

An R8 Cushcraft vertical was the first thing I looked at, but there is nowhere in my yard to stick one where it would not fall on a power line if it did fall. We've got a several of them to the rear in my yard, plus my place abuts a park too, so there are lots of kids running around and I'd be afraid that one of them would run into the antenna or mess with it.

> Hope your house doesn't have aluminum siding...

no, thank goodness. It's wood.

> btw - when you go for the code, try the General written, even if you're "not
> ready". It's good practice, there's no extra fee and you might surprise
> yourself.

Ehh... I may wait for that. I've done several of the Java online General quizzes, just using what I know know for answers, and am not even close to passing yet. I know that if I took the General now and didn't pass, it would not be a reflection on my study habits or anything, but I just don't know how good of an idea it is to go into a test, knowing you're not ready, and expecting to fail. Psychologically speaking, it may be discouraging, even though I know I could and will learn the material eventually.

73 de Jackie

"In the old days, it was not called the Holiday Season; the Christians called it 'Christmas' and went to church; the Jews called it 'Hanukkah' and went to synagogue; the atheists went to parties and drank. People passing each other on the street would say 'Merry Christmas!' or 'Happy Hanukkah!' or (to the atheists) 'Look out for the wall!" - Dave Barry

> Possibly. But the change took place before
> Ike was inaugurated in January of 53.

K7JEB:
My thinking was along the lines of how
"Republican" the Clinton administration
became in its closing years.

I was all of 10 years old in '52, so it
was just a swirl of "I like Ike" buttons
to me back then.

K7JEB:
>> The years during and following WWII saw
>> radiotelephone come into technological
>> maturity (as did SSB a decade later, as
>> Bill Sohl pointed out) and one no longer
>> had to be a "radio genius" to put a
>> 'phone rig on the air on any amateur
>> band.

N2EY:
> That was true in the late '30s. And it
> still took quite a bit of knowledge to
> put a 'phone rig with a good quality
> signal on the air in 1952.

K7JEB:
It did, but there were a good many WW2
vets back in civvy's then who had cut
their teeth on BC-610's and kept fleets
of ART-13's in (and on) the air. I don't
think AM was quite the mystery it had
been before the war. And then there
was that windfall of surplus command

sets that made quite acceptable AM
right out of the box from Fair Radio.

K7JEB:
>> It was at least technically possible to
>> expand the privileges. And ham radio had
>> shown itself to be a "Good Thing" during
>> WWII and so, perhaps, deserving of government-
>> policy encouragement and growth.

N2EY:
> Part of that Good Thing, however, was that
> hams knew code and theory already, and needed
> less training than raw recruits.

K7JEB:
Very true. Consider the perception of a
gov't policy-maker, though. All the gov't
has to do is throw frequency allocations
at these folks and they train themselves
up in technical and operating skills and
then flood the enlistment centers when
the next Big One comes around. And in
1952, it seemed like Big One #3 was just
around the corner with the Russkies and
the Red Chinese. Definitely going to
need a lot of radio ops for a land war
in Asia.

N2EY:
> I think the biggest driving force behind
> the FCC's sudden change of heart was
> the desire to get hams using and working
> on SSB. The original 1951 restructuring
> would have reduced the flow of new hams to
> HF 'phone, because it would have required
> post-Jan 1 1953 hams to get Extras in order
> to use HF phone on the bands between 2 and
> 25 MHz. Less crowding, fewer 'phone hams,
> less need for SSB and fewer hams working on it.

> Open up those bands to Generals and
> Conditionals, and there would be enough crowding
> to push SSB use by hams.

That's a very interesting idea. That *was* the
ultimate effect of over-populating the 'phone
bands with DSB-AM - encouraging the transition
to SSB. To be honest, though, it strains my
credulity to think that the FCC could be *that*
forward-looking (and that Machiavellian). It
seems much more straightforward to think that

someone saw the regulations as overly restrictive
and passed the word down. It was definitely
a turnaround, though, and on short notice.

N2EY:
> So let's be proactive. Suppose S25.5 goes
> away next year, and FCC decides to dump
> Element 1. What else should FCC change
> in the ham license structure?

K7JEB:
In my opinion, not a thing. There are so
many disincentives to getting into amateur
radio right now that I honestly believe that
the FCC could print ham tickets on Wheaties
box tops and we still wouldn't see growth
in either VHF or HF operation beyond what
we are experiencing now. All operator
licensing should do is make sure amateur
radio operators don't interfere with the
other users of the radio spectrum.

K7JEB:
OK, OK. I'll backpedal some more and say that somehow
the cost of crystal filters, however implemented and
on whatever IF frequency, did come down during this
period and they became a more predominant component
in the architecture of amateur radio SSB transceivers.

> But you've got the basic idea. Phasing really took

Am I mistaken, or is obscene and offensive language a violation of FCC regs? Kim has made it plain enough on this forum that she specifically requested the callsign because she is pleased by its potentially obscene interpretation. She has also claimed that "hundreds" of contacts informed her that they "loved" her callsign. Seems like a clear enough case of violation...has anyone lodged their objections with the FCC?

On balance, she certainly isn't single-handedly destroying the hobby. But she's certainly one more hole in the dam. (As are the hams that cuss on the air. How have things gotten this way? Reminds me of CB radio in the mid '70s.)

There's nothing like "The Great Depression" to make you want to return
to the bad old days. Maybe I'll go collect some coal by the railroad
track and reminesce. Wait, they're diesel now and its illegal to play
on the tracks.

I guess some things really do change.

Tell me about the Flower sisters.

Tokyo's Hardy Barracks was home away from home for U.S. soldiers in
1950s

By Rick Chernitzer, Stars and Stripes
Stripes Sunday magazine, November 10, 2002

Photos courtesy of Leonard Anderson
The main entrance to Hardy Barracks and the offices of the U.S. Army's central command in 1953, decorated for Christmas.

A soldier, Gerald Brame from Iowa, writes a letter to his family. Only one locker cabinet is visible in the photo, but the soldiers got a second one for civilian clothes. Foot lockers were kept on wooden stands for convenience, and shoes and boots went under the aluminum foot locker.

Soldiers on their way home to Hardy Barracks pause for a photo opportunity.

The Flower Sisters band plays at Hardy Barracks' fourth-floor Service Club.

For a young GI serving his Pacific tour in the '50s, there was one place to be: Hardy Barracks in central Tokyo.

Leonard Anderson has a memory of the installation as vivid as the color photographs he took of the facility when he was stationed there almost 50 years ago.

>wheel of one of those huge SUVs that Mommy and Daddy have either bought for
>them or let them borrow!
>
Mummy and Daddy do that because they think such things are safe!

--

It would be interesting to see the appropriate stats on that. PA is going in the opposite direction - actually raising the driving age due to the terrible accident records of 16-17 year olds. Unlike amateur radio licensing, younger drivers have a disproportionate share of problems behind the wheel.

Here's another fun stat: Guess which states have the best and worst divorce stats?

Amateur Radio Newsline™ Report 1321 – December 6, 2002

Amateur Radio Newsline report number 1321 with a release date of Friday, December 6, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. North Korea takes its only ham off the air and the first digital voice Q-S-O across the Atlantic. These stories are first on Amateur Radio Newsline report number 1321 coming your way right now.

(Billboard Cart Here)

**

INTERNATIONAL – N. KOREA: LAST HAM FORCED OFF THE AIR

The Peoples Republic of Korea appears to no longer want Amateur Radio operating from its soil. It made its intention clear when it asked its only ham ito pack his gear and send it out of the country. Jeramy Boot, G4NJH, in Nottingham England has the details:

--
Ed, P5/4L4FN, the only radio amateur operating legally from North Korea, has had to close down. On the evening of the 22nd of November, Ed was called into a meeting with the North Korean Radio Regulation Board. Without any explanation he was politely asked to stop all transmissions and to pack up all his radio equipment.

Ed spent the following day dissembling his antennas and packing boxes. That afternoon government officials sealed all the boxes and Ed has been told to take everything out of the country when he leaves North Korea for a two-week holiday on the 10th of December.

Jeramy Boot, G4NJH
--

With Ed now off the air, ham radio is gone from North Korea and nobody expects it to be resumed anytime in the near future. It also puts North Korea back near the top of D-X'ings most wanted list.
More on this story is at www.amsatnet.com/p5.html. (RSGB)

**

EMERGING TECHNOLOGY: DIGITAL HAM AUDIO SPANS THE ATLANTIC

Two ham radio communications pioneers have achieved a major breakthrough. The first two-way digital voice transmission across the Atlantic via Amateur Radio. Norm Seeley, KI7UP tells us who did it and how it was accomplished.

--
Doug Smith, KF6DX, and Didier Chulot, F5MJN, have successfully transmitted and received HF digital speech signals between Sevierville, Tennessee and Paris, France. It happened on Friday, November 22 nd.

The first historic contact took place on 21.218 MHz in the 15 meter band. Chulot spoke with Smith for several minutes using a high-frequency digital link within a 3-kHz bandwidth. Signal strengths were S-5 to S-7 and readability was solid in both directions.

The feat was accomplished using Ten-Tec transceivers and digital audio systems from Thales Communications.

--
DEMO AUDIO HERE
--

The Q-S-O demonstrated the advantages of digital audio for two way radio. This includes noise-free, FM-like reception and the potential for simultaneous voice and data exchange.

With an eye toward the digital future of Amateur Radio, I'm Norm Seeley, KI7UP.
--

The Ten-Tec/Thales system used in this experiment is based on a new international broadcasting standard for digital radio adopted last year by the International Telecommunications Union. The FCC has approved a similar standard for broadcasting in the United States. An Amateur Radio version is expected to appear on the market sometime in 2003. (KF6DX, Ten-Tec)

**

EMERGING TECHNOLOGY: PPW PROPOSES ELECTRONIC INFRASTRUCTURE TO WARN PUBLIC OF DANGER

A group of U.S. communications security experts has recommended that Americans be alerted to impending danger over their wireless devices. Amateur Radio Newsline's Fred Vobbe, W-8-H-D-U, takes a look at this new concept in emergency notification:

--
The Partnership for Public Warning says that a national wireless system could send alerts to citizens via their pagers, mobile phones or computer screens.

The Partnership for Public Warning is a newly formed thirty-member advisory body that includes representatives of government agencies, relief agencies and even a ham radio operator. And on Monday, November 25th it released a report that says conventional media broadcasts may spread alerts too slowly in instances of pending natural disaster or terrorist threat.

P-P-W says that the newly formed Department for Homeland Security should take responsibility for leading development of a national all-hazard public warning architecture. This, in partnership with other federal agencies, state and local governments, industry, universities and other stakeholders. The technology itself would be produced by private industry with the alert system

operated by governments and selected other organizations following a strict set of alert protocols.

P-P-W says that improved warning systems and procedures will reduce losses from natural and man-made disasters, and will speed recovery. Most important is that it will save lives.

For the Amateur Radio Newsline, I'm Fred Vobbe, W8HDU

--

President Bush cited quick responses to attacks as a priority of the new Department of Homeland Security which will consolidate parts of 22 departments to better prevent attacks in the wake of the September 11, 2001 terrorist attacks in which some 3,000 people died.

information about the Partnership For Public Warning is on the web at http://www.partnershipforpublicwarning.org/ppw (Published reports)

(5 sec pause here)

**

HAM RADIO GROWTH: GOOD NUMBERS TO US

The folks on that "other band" might call this “almost good numbers.” This with word that the number of radio amateurs licensed by the Federal Communications Commission is at a five-year high. But there are some caveats. Bill Pasternak, WA6ITF, has more:

--
According to the CQ Magazine website, FCC numbersshow a total United States ham population of 684,498 as of October 31st. And breakdowns provided by Joe Speroni, A-H-Zero-A, say that the primary growth has come among Amateur Extra Classand General Class licensees. Extra is now breaking the 100,000 point for the first time.

Technician Class figures have essentially held steady. Also we had 20,000 new hams entering the hobby in the year ending October 31st.

License renewal statistics were also encouraging with the renewal rate climbing from an abysmal 45% two years ago to a better, but still unacceptable, rate of 55% in the past year.

Better numbers, but not the best.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, in Los Angeles.
--

More on licensing figures are on the web at www.speroni.com/fcc (CQ)

**

HAM RADIO IN THE PUBLIC EYE: THE ATLANTC MONTHLY

The November 26th edition of Atlantic Monthly Magazine On-Line has some good words about ham radio and its role in homeland security. In an article titled America's Secret Weapon in the War on Terror, one of the groups singled out for attention is the nations corps of Amateur Radio operators. Its described in the article as an ever-ready line of emergency communications.

The story goes on to say that America boasts 650,000 licensed ham-radio operators. It quotes he ARRL's Mary Hobart as saying that about 1,500 of them are fully certified in emergency communications and are prepared to rush to the scene of a forest fire, flood, or hurricane with a jump bag full of portable radio equipment. And says Hobart, That can be crucial.

Atlantic Monthly notes that when phone lines, radio towers, and even satellites go down, ham operators -- broadcasting each to each other , and operating on batteries or generator -- stay on the air. And says Atlantic Monthly, after the terrorist attacks of 911 when New York's cell phones turned into paperweights hundreds of hams, some from as far away as Texas and California, turned out to provide radio lifelines for emergency workers and relief agencies.

The article is must reading for everyone involved in Amateur Radio public relations. It can be found at the U-R-L listed in this weeks Amateur Radio Newsline print edition.

The complete article is at
http://www.theatlantic.com/politics/nj/rauch2002-11-26.htm (KS2G)

ENFORCEMENT: FCC INVESTIGATING INTERFERENCE TO EMERGENCY TRAFFIC IN LOS ANGELES

The FCC is looking into allegations that two Los angeles area hams interfered with a distress call on an area repeater. The FCC's Daryl Duckworth, NN0W explains:

--
"The Enforcement Bureau has opened a case involving allegations of deliberate interference to emergency communications on the N6SAP repeater in the Los Angeles area. Anton W. Johnson, N6OAY, and Ledge Musselman, KC6NCN, are being asked to explain the allegations of the operations on October 2.

Information is also being sought from the repeater licensee. Scott Press.

This mater is being taken very seriously by the Enforcement Bureau since emergency communications is one of the foundations of Amateur Radio."
--

The FCC claims that Johnson and Musselman interfered with attempts to relay emergency traffic on the 147.435 repeater at about 9:45 a.m. on October 2nd.

Press is being asked to explain what action he is taking in this matter. He is also been directed to summarize any conversations he may have had with the licensees against whom the allegations have been made. The FCC says that Press must also provide any written correspondence he may have sent to Johnson and Musselman. All three were given twenty days from he date of the FCC letters to respond.

**

ENFORCEMENT: THE STORY OF THE EX-AA8DP

A follow-up now to last weeks report of the capture of Steve Anderson, the ex AA8DP. Anderson was wanted in connrection with an alleged attack on a police officer. He was arrested in the hills of North Carolina following a manhunt that has lasted over a year. Amateur Radio Newsline's Henry Feinberg, K2SSQ, has the story of how Anderson was caught:

--

A tip to the Fox Television program "America's Most Wanted" and forwarded to federal investigators has led to the arrest of Kentucky fugitive Steve Anderson, the ex-AA8DP. Anderson, an alleged white supremacist who resigned his Amateur Radio license almost two years ago and then operated an unlicensed radio station from his home, had been at large since October 14th of 2001.

According to the Louisville Courier-Journal, Anderson was arrested in the mountains of southwestern North Carolina by the Bureau of Alcohol, Tobacco and Firearms and the North Carolina State Bureau of Investigation. The A-T-F's Don York told the newspaper that America's Most Wanted received a tip about Anderson's whereabouts after airing its second segment on him about a month ago. The tip was forwarded to the A-T-F, which worked the case with North Carolina authorities.

Anderson is accused of shooting an automatic weapon at Deputy Scott Elder. This, after Elder had pulled Anderson's truck over north of Middlesboro Kentucky for a traffic violation. Elder was unharmed after Anderson allegedly opened fire, but his police cruiser was struck about two dozen times. Police said Anderson then drove into the mountains, and a search of his property turned up explosives and guns.

Anderson had attracted attention of authorities several years ago by playing host to a small Ku Klux Klan rally during which a cross was burned. He also allegedly operated a shortwave radio station out of his home, where his commentary against minorities, immigrants and the government drew the attention of the Federal Communications Commission. The Anti-Defamation League complained to the FCC about Anderson's broadcasts which were taking place in the Amateur bands. Rather than explain his actions, Anderson sent in his AA8DP license for cancellation. It was accompanied by a rather convoluted message that said he did not recognize the licensing authority of the FCC which he called an agent of a foreign power.

Anderson continued to broadcast but bowing to extensive pressure from the nations ham radio community, he took the transmissions out of the Amateur

service bands. They stopped after he disappeared following the alleged attack on Officer Elder.

For the Amateur Radio Newsline, In Henry Feinberg, K2SSQ.
--

As previously reported, the ex-AA8DP had been a member of the Kentucky State Militia until April 2001. That group dismissed Anderson because he refused to shut down his unlicensed radio operation. (ARNewsline(tm) from published reports)

**

THE INTERNET VS. HAM RADIO: HOTMAIL AND JUNO BLOCK ARRL E-MAIL FORWARDING

If you get your e-mail using the American Radio Relay League's @arrl.net vanity address, and use Juno or Hotmail as your account you know that you were cut off for a few days. It wasn't the ARRL's doing. Blame it on the twi internet service providers.

According to an ARRL bulletin the two companies notified the League on November 25th that they had stopped accepting e-mail messages forwarded to users of their services from the arrl.net e-mail server. According to representatives of the two companies, this was part of heir solution to the Internet-wide problem of spam.

The ARRL, through the vendor for the arrl.net server began working with both companies to resolve this matter. The ARRL and Hotmail reached a accord the fllowing day and service was restored. Juno was back late on Monday December 2nd. During the peak of the service outage, forwarded e-mail to nearly 6,000 ARRL members was curtailed. (ARRL)

**

RADIO LAW: NEW CODES DEVELOPED TO HELP STUDY RADIO RELATED HIGHWAY ACCIDENTS

State highway departments will soon get help tracking how many traffic accidents are caused by drivers chatting on their handheld cell phones or C-B sets, using their pagers or checking their personal digital assistants. In January, every state will receive a booklet of revised codes that describes causes of vehicle crashes, including distractions from electronic communication devices. The codes were developed by traffic safety and crash data experts, including the Governors Highway Safety Association and the Federal Highway Administration.

A spokesperson for the Governors Highway Safety Association, says that the updated crash codes will allow the organization to develop data that demonstrates whether electronic distractions in cars are a serious safety problem. A March report by the National Conference of State Legislatures suggests device-related distractions killed an estimated 600 to 1,000 motorists in 2001 and could kill 2,000 a year by 2004. (Published news reports)

**

RADIO EDUCATION: HAM RADIO COURSE OFFERED AT PENN STATE

Amateur Radio is a part of the training being offered this fall to freshmen at the Pennsylvania State University. According to Brad Parola, KB3HQE, Vice President of the Penn State Amateur Radio Club, part of the course during the first half of the Fall semester included exposure to Amateur Radio. Students were shown how to tune radios like the Ten Tec Pegasus, shown how to receive PSK 31 signals, and were given a tour of the world famous Rock Springs Antenna Test Range run by Dr. Jim Breakall WA3FET. Early in October, those students who were interested were given the opportunity to take their Technician class tests. So far 15 students have passed an Amateur service exam. (KB3HQE)

RESCUE UPDATE: ZL1AMO CONDITION REPORTED UNCHANGED

We have an update in the medical condition of famed D-X'er Ron Wright , ZL1AMO. Jim Meachen, ZL2BHF, has the latest:

--
A bit of good news this week. Wrights daughter Terri says the family visited Ron in the hospital and he was sitting up in a lazy boy chair. This is the first time any of the family had seen seen him out of the bed since he was hospitalized. Terri Wring says that Ron is also trying to communicate with those around him and he looks a lot better than on previous visits.

As reported last week, Wright suffered collapsed lungs while visiting Fiji. He was air lifted by an emergency air ambulance to Auckland New Zealand where he was initially reported to be in critical condition and on life support.

The INDEXA – the International D-X Association -- has established a fund to assist Wright and his family with the cost of air evacuating him from Fiji to Auckland. Donations go to the ZL1AMO Air Ambulance Fund, in care of Bill Jennings, W4UNP, P. O. Box 607, Rock Hill, South Carolina, 29731. Sorry, but INDEXA says that contributions to this fund are not tax deductible.

From Auckland New Zealand – down under – I'm Jim Meachen, ZL2BHF, reporting for the Amateur Radio Newsline
--

Updates on the fund and Wrights condition are being posted to the web at www.papays.com/opdx.html (ARNewsline(tm), INDEXA, AA7UC)

**

THE SCIENCE PAGE: WHALES YES – NAVY NO

A federal judge has tentatively blocked the Navy from deploying a new early warning system because it might harm whales. Amateur Radio Newsline's Brucce Tennant, K6PZW, has the rest of the story:

--
A Federal court has said no to a new high-frequency SONAR system designed to detect enemy submarines at long range because it could further endanger the worlds whale population. But in making his ruing, the judge also said the Navy may use the sonar during wartime and must be allowed to train with it beforehand.

In partially siding with environmentalists, the judge ordered both sides back to court to begin formulating a plan balancing environmental and military concerns. Environmental organizations say the Navy's powerful sonar system can strand, maim or kill marine mammals. The Navy disagreed.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.
--

A few days earlier, a different judge ordered the National Science Foundation to stop firing high-intensity sonic blasts into the Gulf of California because they harm whales. So far there has been no comment from either the Navy or the N-S-F. (Published reports)

**

HAM RADIO IN SPACE: UO-22 IS BACK WITH US – FOR NOW

G7UPN reports that U-O-SAT 22 is back on line and open for business. At least for the time being.

Chris tells the AMSAT News Service that new software has been loaded to try and keep the downlink operating most of the time. But says G7UPN, UO-22 is an older veteran satellite. This means it may give problems in the near future. More information is in cyberspace at www.amsat.org (ANS)

**

INTERNATIONAL – JAPAN: JA SAYS NO TO PLT

Japan has said no to the introduction of Power Line Transmissions or P-L-T in that nation. Following extensive trials, the Ministry of Public Management, Home Affairs, Posts and Telecommunications has decided not to permit their roll-out for fear of interference to other services.

The Japan Amateur Radio League had been actively working with the government, radio astronomers, broadcasters and others to assess the impact of P-L-T systems on the radio spectrum. The results of this P-L-T study in Japan is a real eye-opener. It showed conclusively that Power Line Transmission system emissions are harmful to High Frequency communications operating in the range 2 to 30 MHz. Because of this Japan's telecommunications regulators have refused all requests from P-L-T manufacturers to operate these systems. (JARL, Q-News)

**

INTERNATIONAL: GETTING ON THE AIR DOWN UNDER

Still in that region of the world, were you aware that New Zealand is one of very few countries in the world where licensed amateurs visiting from overseas can immediately operate?

Well it is and a visiting amateur can get off an airplane, walk into the terminal building and start operating on 144 MHz and above by simply signing his own call sign portable Zed-L. This, without the hassle of getting a license and without paying a licence fee.

For more information on operating in New Zealand as a tourist or visitor take your web browser over to www.nzart.org.nz (NZART)

**

ON THE AIR: COMMEMORATING DIANA

Back here in the U-S-A, the first successful moon bounce experiment was conducted by the Army Signal Corps on January 10th 1946. And to commemorate the event, the Ocean Monmouth Amateur Radio Club will operate from the historic Diana radio site on January 10th 2002. The Ocean Monmouth group plans to operate using Morse and SSB in the General and Novice Technician sub bands of the 80, 40, 20, 15, 10 meter bands. For more information on the Diana Project and for QSL info please visit the OMARC web site at www.qsl.net/n2mo (OMARC)

**

DX

In D-X, F6COW is reporteed tobe operating from the 9S1X club station in the Congo. He will reportedly be there until the 9th
of December. (GB2RS)

Also, F6BLQ will participate in the ARRL 10 Meter Contest on the 14th and 15th of December, also as 9S1X. His operation will be on SSB only. (GB2RS)

And ST1MN is a new ham in the Sudan. He will be active on all bands until the end of June 2003. Q-S-L as directed on the air. (GB2RS)

A lot higher in frequency, FT1ZK, is active on 6 meters every afternoon from Amsterdam Island. The operator is named Caroline and she has a beacon transmitter active on 50.086 MHz and running 24 hours a day. She will be on Amsterdam Island until January 16th. QSL via F5JCB. (VHF Reflector)

**

THAT FINAL ITEM: THE CANALS OF VENUS - DEBUNKED

And finally this week lets turn our eyes toward the planet Venus. Just our eyes. Not our telescopes. Because if we do use a telescope we might make the very same mistake made by a very famous astronomer regarding canals on that mist shrouded planet. Q-News Graham Kemp, VK4BB, takes us into the cosmos for this one:

--
Turn of the century astronomer Percival Lowell is well known for promoting the incorrect notion that water canals had been built on the surface of Mars. He

also drew a map of the "canals" on Venus; the only problem was that no one else could see anything resembling canals because Venus is always shrouded in clouds.

Turns out that Lowell had narrowed the aperture of his 24" telescope down to about 3" to attenuate the bright light from Venus. That little known fact - recently publicized - caught the attention of optical experts who realized that Lowell had unwittingly turned his telescope into a reverse ophthalmoscope, an instrument used to examine the interior of the eye. Instead of mapping the surface of Venus, Lowell was apparently mapping the shadows of blood vessels and other structures on his own retina!

Sky & Telescope magazine explains the situation in detail, presents Lowell's sketch of the Venusian "canals," and a photograph of retinal blood vessels. The two patterns are strikingly alike.

From Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio Newsline.
--

You can see the pictures Graham reefers to in the online edition of Sky and Telescope magazine. Just take your web browser over to http//skyandtelescope.com/news/current/article_648_1.asp (Q-News)

> I'd have to kill you. <BSEG>

But just how far past the button? Been a lotta cheap shots by the
assorted "professionals" in this NG over time about "non-technical"
people like myself being "appliance operators". Nowhere in any of your
posts in this sub-thread have you mentioned who *fixes* the radio gear
these days. Do RMs also do the radio bench work? Toss up replacement
antennas? Replace bad cable runs? Back a bunch of years ago when I was
a Naval GSer and earlier Great Lakes churned out ETs who fancied
themselves "the real radio professionals" and RMs were the appliance
operators +/-. Does the ET rate still exist and if so where are the
lines drawn among RMs, ITs and comms ETs?

I ask because 19 months does not strike me as nearly enough time to
turn the average raw gob into a soup-to-nuts analog & digital op *and*
tech particularly considering the huge increases in the variety of
technologies and compelxities involved in the systems used today vs.
in yesteryears.

> radio operators don't interfere with the
> other users of the radio spectrum.

Though it doesn't seem to be causing problems you hear of, licensing really doesn't do that now, and hasn't for a long time. I'm not sure it's possible to keep hams from interfering with other users. Case in point- the organization I used to work for operated a lowband VHF radio system using three frequencies on 42 mHz, running 24/7. As it happens, 42.220mhz, the primary frequency monitored at that time, is the third harmonic of 14.073 mhz and the sixth harmonic of 7.036 mhz. Both of those were and still are very active amateur 20 and 40 meter CW frequencies, as you know.

Given that the squelch sensitivity on those old receivers was well below a tenth of a microvolt, any emission that showed up on that 42 mhz channel would open the squelch and block reception, and most ham radio transmitters, even if clean, can easily transmit enough harmonic energy to do just that. And sometimes did. On a squelched receiver a CW signal that was strong enough to quiet would make a clicking sound, and wasn't copyable, though one could easily tell that it was Morse code. So on several occasions over the years when that occurred I would open the squelch on that receiver to be able to copy the CW as noise quieting thus reading the ham's callsign so I could ring his phone and "suggest" he move a few kc.

So while the ham probably understood the theory behind harmonics the material he studied for his test didn't keep him from interfering with other users of the RF spectrum.

That's only a single example of how such inadvertant interference can occur. Since most persons operating those systems aren't hams nor otherwise qualified in radio technology I've wondered how many times it has happened when the operator had no clue as to the cause. I'm sure the organization where I worked wasn't the unique in that sort of experience.

And the shoe can easily fit the other foot. I once received a phone call from another government radio tech who

lived a half mile from me, a person well qualified and of long experience, telling me that he was coping my ham radio transmitting on a VHF Forestry frequency. I had been talking on a two meter FM repeater, but had experienced no problems of any kind with my rig, and I was rather sure there was some mistake. I asked him a few questions. Turned out he had three VHF scanners turned on in his house at the same time. When I did a little math, it revealed that twice the 10.7mhz IF frequency of either of the scanners plus my 2 meter transmitter output frequency equalled the Forestry frequency he was hearing me on. Obviously what he was hearing was a mixing product.

I called him back and suggested he turn off the other two scanners and listen for me again on the forestry frequency. When he did, I was no longer heard. We tested several times to make sure there was none of my 2meter signal on that frequency, and there was not. A well trained and skilled tech had been fooled by his own equipment.

It can be a snakepit out there, whether or not one is properly tested. I don't believe that a large percentage of hams with no experience other than what they get in testing and operating only on ham radio would be able to sort out such a problem. And surely not on the strength of what they learned for the licensing test. It just doesn't go that far into the subject matter.

'Member that movie "Logan's Run." The line, "there is no sanctuary." Well, there is no "get government off our backs. Each party of choice loves to claim it--and both have very manipulative ways of interpreting it and *increasing* government on our backs.

Well, let's see. Just off the cuff, and I'm going to be generalizing here something awful, I guess for worst divorce statistics it wouldn't be a Southern state because these women are way too wimpy; it couldn't be a sparsely populated state because country folk really have to count on each other through thick and thin; and it couldn't be too populated a state because those folks are so busy in each other's bedrooms I doubt anyone notices they are getting cheated on...so, let's see. How 'bout Massachusetts, and Washington, DC? And, for best--given the same reasons--how 'bout Wyoming and New Mexico? Maybe Utah?

That would be ET's, for the most part. Some few RM's (now IT's) carry
repair NEC's, but as I recall we were talking about OPERATORS in this
thread.

But if you want to talk about repairmen, then Navy ET's also make amateurs
look like Amateurs with a capitol "A".

It's a lotta puffery, ie smoke blowing, by Hans. Hey, he's been out of the military almost as long as I, and I
later worked a 30 year career, and have been retired eight years. He knows just as you and I that the goal of
the military, of every service branch, has LONG been seamless, troublefree, anybody-can-do-it communications.
We're getting there, the fewer layers of people to glob up things up and slow things down, the better. Ideally
the head honcho himself picks up the mike and eliminates everyone else but the maintainer, card changer,
circuitboard swapper, call him/her whatever you want. Maybe the navy wants to call their ET's "operators" so as
to pay them less, that seems a good way to go about it. And radios are being made more and more expendable,
disposable, redundant, all for the very same reasons. The less you gotta fix, the less people it takes to make
it all go. And personnel costs are the big bottom line deal these days. Even in the Navy.

Yes, the service schools hurry the kids through a lot of material in short order, always have. Then they often
hire civilian "tech reps" to babysit them so as to keep them with at least nose and eybrows above the surface,
kinda keep them from drowning in their own inexperience and mistakes.

And...I had a Secret clearance way, way back there. As an OPERATOR. When I later went to tech school most of the
positions graduates landed in required NO clearance. Most of those who went to secure positions were those of us
who already had the clearance for it, usually career types. I finished out my second hitch and bailed.
The work operators do is just as likely to be sensitive as that of technical types, more so at times.

I don't wish to do either. Ever read Len's own statements. He not only
doesn't hold an amateur license, he's never tested for one. I do wish
you'd pay attention.

> One more reason to NOT let your babies grow up to be "proferssional radio

> engineers".

Whoa, let's not get too hasty here Steve and throw the babies out with the washwater. They might grow up to be REAL radio engineers which The Putz is *NOT*.

Lemmee 'splain for the record. There are engineers and there are non-engineers. The difference being whether or not the undergrad wallpaper reads "Bachelor of Science in (many disciplines) Engineering" from an accredited engineering school or not. It's 100% digital, there is no middle ground. Some of the engineers who pop up in this NG include Jim n2ey, Cecil, Rick Tannehill from back when, all electrical engineers. I'm a mechanical engineer.

There are engineering support folk out there who may or may not have formal technician-level educations in the assorted disciplines who conventionally work under the direction of engineers. The Putz is one of those. They are *not* engineering professionals. Not only that but there is no such thing as a "radio engineering" discipline. Bottom line here is that The Putz trying to pass himself off as a "professional" anything let alone a "professional radio engineer" is absolute total bullshit at the oxymoron level.

And beyond that there are state laws which prohibit anybody from advertising themselves as "professional engineers" unless they're first qualified to take then have passed the state professional engineering exams. Yeah, right, like The Putz has a California PE ticket to practice "professional radio engineering" . . Bwaahaha!

So if the baby grows up and decides she wants to do professional radio engineering for a living fer chissake Steve please don't use The Putz as an example of why she shouldn't go for an EE degree, ship her off to a decent engineering school.

The Putz comes outta the old aerospace world I was in for many years. Back when I was plying my trade in that biz and needed a grunt or grunts to crank out the manufacturing drawings of the thingeys & systems I was responsible for coming up with I usta buy widgets like The Putz. To do that I used the same standard Navy purchase requsition form I used to buy pipe flanges. Sometimes I had trouble telling which was which when they were delivered.

OK, good, thank you for the answer to my question.

> but as I recall we were talking about OPERATORS in this
> thread.

WTF Chief, I gotta get permission from you to ask a question which is
obviously and closely related to "your thread" or what? Hold yer
breath Chief. First we get frequency cops now we have a one up and
three down thread cop. Wunnerful.

> But if you want to talk about repairmen, then Navy ET's also make amateurs
> look like Amateurs with a capitol "A".

All ETs make all hams look like amateurs on the bench. Got it Chief.

Fact is however that out here in commercial reality a kid who does a
hitch or two as an ET is a helluva lot better positioned to turn his
tax-paid education and OJT into a job than is an RM or IT huh?

WTF Chief, go do some Acey-Ducey and chill out.

Ah, OK! I'd have sworn you once said 1979.(Geez, you're more of a pup than I thought) So I was wrong on that point.

Your lack of countering arguments to the remainder of my post is noted.

:-)))))

Dick

But.....you said you worked CW on a Navy ship, but didn't you recently say that the Navy hasn't used CW since 1956? If you went into the Navy in 1964.....

But there are. It's in section 113 of part 97; subsection (a), line 4:
"No amateur station shall transmit...obscene or indecent words or
language..."

The "dumbed down" question pool clarifies the intent and scope of this
restriction. The intent is to avoid offending others, and to create an
environment suitable for children to participate (dumbed-down question
T1A15). The scope includes any word you regard as potentially
offensive (dumbed-down question T1I10).

Anyone who knowingly says tasteless things with the expectation of
offending others is in violation of 97.113a4. If you encounter the
violation and feel motivated to take action, you should report the
incident to the FCC. (If the FCC takes no action, there's not much you
can do. Whining TO the person will probably gratify them, since that's
what they were after in the first place.)

> DUH!!!!

I doubt that everyone gets a vanity callsign for the reaction. I know several hams that got vainty callsigns with their initials, they don't want or get any particular reaction to them. They are in good taste. You obviously chopse your's to get a reaction, which indicates someone who seeks attention anyway they can get it. Your call shows poor taste, why don't you write in large letters on the side of your car, "I have big tits"? Even though it is tastless it will get you plenty of attention, from all the truck drivers for sure.

OK. What is vulgar, obscene or otherwise indecent about that? I gotta see this, too. Anything I ever say on the air can only be construed as "dirty" if the mind receiving it is "dirty."

Go to www.google.com and do a search on FCC and
Corruption, FCC Corruption, and other similar words/phrases.
It will take you a while to read, but it is quite an eye-opening
experience. You'll find people, places, events, legal actions,
etc. In some cases, people/times/dates, etc. are very well
documented. You can also sense the frustration of trying to
expose criminality and corruption inside the FCC. Apparently,
there is a good ole boys system in place that sweeps dirt under
the carpet quickly and efficiently. One very interesting case
where that system failed was when several FCC employees at
Laurel MD were caught by county law enforcement officials in
the act of running a child pornography ring. They used government
computers and ran their dirty little business while on the public
payroll!!!!! Incredible! You can bet the FCC never published a
press release on that little caper!

'Round here the trick is to make home just unpleasant enough for a teen that
they want to leave ASAP. Nothing abusive, just little things. Like "you can
borrow the car but you have to bring it back with more gas in it than you found
it" and "while you're out, here's a list of things we need picked up".
>

"women are way too wimpy"?I'm sure you have much more data/experience than I.
Expand and explain (this is gonna be GREAT!!!)

>it couldn't be a
>sparsely populated state because country folk really have to count on each
>other through thick and thin; and it couldn't be too populated a state
>because those folks are so busy in each other's bedrooms I doubt anyone
>notices they are getting cheated on...so, let's see. How 'bout
>Massachusetts, and Washington, DC? And, for best--given the same
>reasons--how 'bout Wyoming and New Mexico? Maybe Utah?

That's what I thought, almost exactly. We're both almost totally wrong.

It turns out that four of the five worst states are in the stand-by-your-man Deep South, and that the northeastern liberal rustbelt states are among the best. Utah is the best, though, for obvious reasons.

Two of the very worst are Arkansas and Oklahoma. So much so that their governors "declared war" on divorce. What are they gonna do - take prisoners?

See

http://archives.salon.com/mwt/feature/2000/01/24/divorce

and

http://www.csmonitor.com/durable/2001/06/28/p3s1.htm

and

http://www.religioustolerance.org/chr_dira.htm

(note that atheists and agnostics have the LOWEST rate!)

You can look up the exact stats at leisure, but the trend is pretty clear.

The important stat is "resident divorce rate" because states like Nevada have lots of zoom-in divorces.

Izzat fun or what?

>blah, ARC-5," etc. But yew've mysteriously failed to respond so far.
>Get back to me on this good buddy, answer quick, we're all waiting . .

Kellie, all you claimed was an "ARC-5 JEEP radio." :-)

"ARC-5" sets were designed for and used in AIRCRAFT that had 28 VDC electrical systems. Jeeps had 6 VDC electrical systems in WW2. Ten points if you can guess the year that the US military started "harmonizing" ground vehicle electric systems to match aircraft. :-)

Your experience in hamming up radio is restricted to HF bands. The US military operates from ELF to tiny mm wavelengths of microwaves and every decade segment of the EM spectrum in between.

>Lemmee 'splain for the record. There are engineers and there are
>non-engineers. The difference being whether or not the undergrad
>wallpaper reads "Bachelor of Science in (many disciplines)
>Engineering" from an accredited engineering school or not. It's 100%
>digital, there is no middle ground.

Nope. You are hung up on titles and certificates and ultimately wind up hung by the old school tie.

Engineering is what is DONE, sweetums. A sheepskin doesn't do anything by itself. Kearfott Microwave Division, Micro-Radionics Inc., Birtcher Instrument Division, Electro-Optical Systems Inc., RCA Corporation, Teledyne Electronics, Hughes Aircraft Company (Missle Division), Rocketdyne Division of Rockwell International all gave me engineering responsibility and pay commensurate with that. The Department of Defense, the FBI, the CIA, the NSA, the IRS, the California Franchise Tax Board, the counties of Los Angeles and Ventura, the Social Security Adminstration, Defense Contracts Administration Services (DCAS), the IEEE, the ACM all acknowledged that I was, indeed, an electronics engineer. It's all on the records...in writing!

I can add some "informal" acknowledgements such as in trade publications and the US Patent Office (one plus 28 foreign versions of the same, all assigned to RCA Corp.),

some hobby electronics publications, and, lately, the
Pacific Stars and Stripes military newspaper. :-)

>Some of the engineers who pop up
>in this NG include Jim n2ey, Cecil, Rick Tannehill from back when, all
>electrical engineers. I'm a mechanical engineer.

You forgot to add your qualification of Blowhard of (radio) Science,
a BS degree. :-)

>There are engineering support folk out there who may or may not have
>formal technician-level educations in the assorted disciplines who
>conventionally work under the direction of engineers. The Putz is one
>of those. They are *not* engineering professionals. Not only that but
>there is no such thing as a "radio engineering" discipline. Bottom
>line here is that The Putz trying to pass himself off as a
>"professional" anything let alone a "professional radio engineer" is
>absolute total bullshit at the oxymoron level.

"Professional" by itself refers to the acceptance of money for
work performed. US amateur radio is defined as a radio
activity NOT for pecuniary reasons. I've worked all my adult
life and have collected a "good" amount of money. That's a
definition of professional.

There is a confusion among many as to a state's Professional
Licensing of engineering. In California all Professional Engineers
must be passed by a state board of examiners...which is aided
but not exclusive to a degree granted by an academic
institution. California acknowledges an "Engineer In Training"
period of 5 years before applying for a Professional Engineer
License as the equivalent of a graduate degree. A state
Professional License is largely a legal document rather than
an absolute although possession of a Professional License is
considered to be the highest recognition of third-party
acknowledgement of CAPABILITY of doing something.

Graduate degrees are NOT automatically Professional state
things. Academic degrees aren't even a governmentally-
controlled accreditation, but are acknowledged by common
consent and may included in government title definitions.

Nowhere in this or any other newsgroup have I ever claimed
any Professional Engineer License possession. Not even
the EIT. Neither have I mentioned the academic institution
which granted me a degree...which was so late after starting
to DO things in engineering (relative to the status-symbol
engineers) that it wasn't worth a food-fight over school reps.

>And beyond that there are state laws which prohibit anybody from
>advertising themselves as "professional engineers" unless they're
>first qualified to take then have passed the state professional
>engineering exams. Yeah, right, like The Putz has a California PE

>ticket to practice "professional radio engineering" . . Bwaahaha!

Kellie, try to stay focussed on word definitions. You are an amateur in radio because the US government defines amateur radio as an activity "without pecuniary interest." You are still an amateur in the emotional sense of the word because you just don't demonstrate word-one of knowledge of what happens behind your own ham radio front panels.

As to electronic engineering, I've not only "walked the walk and talked the talk," but I've built the walk by DOING, written it up, showed others how to walk and talk, even invented a small part of it...and gotten PAID for it. Hint: Paid, as in pecuniary compensation. Professional work...getting paid for services rendered, things DONE.

There's no fancy status-symbol sheepskin the size of a bill-board obscuring my "walk." I don't use one as camoflage for a very tiny "walk" or as exaggerated propaganda to enlarge a "walk" to highway proportions. [see the "26 patents claim" where kellie magnified ONE patent into 26 from 25 foreign patent duplicate filings] My single patent was on RADIO, not on bearings. Kellie lost his bearings.

>The Putz comes outta the old aerospace world I was in for many years.

No. The "smoke" is coming out of the lower middle west, not the upper.

>Hey, he's been out of the military almost as long as I, and I
>later worked a 30 year career, and have been retired eight years.

Oh, dickiebird was a military lifer? ["30 year man"] I don't think so.

What did dickiebird DO in the military? March around with a TK-30
studio TV camera at port arms?

>He knows just as you and I that the goal of
>the military, of every service branch, has LONG been seamless, troublefree,
>anybody-can-do-it communications.

A minor glimpse of reality from the lower section of the middle west.

Military communications is NOT organized as a hobby or some fantasy
playground or some giant contest venue to collect QSL cards. It isn't
restricted to HF bands and morse code modes nor does it have
"direction" from a member organization in New England.

Military communications is a requirement of all command levels to
coordinate operations, from the lowest (a squad on patrol) to the
highest (a Corps area HQ or a battle fleet). Communications has
to available NOW, always ready, always as reliable as possible,
as secure as possible, and often with multiple channels on the
same comm link. It is done 24/7 or as the need arises, not as
some hobby fun thing done after work or on weekends.

> Yes, the service schools hurry the kids through a lot of material in short
>order, always have. Then they often
>hire civilian "tech reps" to babysit them so as to keep them with at least
>nose and eybrows above the surface,
>kinda keep them from drowning in their own inexperience and mistakes.

...that must have been how you felt?

>And...I had a Secret clearance way, way back there. As an OPERATOR.

Oh? What did the dickiebird "operate?" According to him his
military time at Fort Monmouth was spent in TV and Radio
BROADCAST training. No security clearances required there.
No handling of regular military communications, either.

Wow, a Secret clearance! :-) To get one, it has to first be
authorized for the work involved...which is sending a number
of forms to several government agencies, all of which have to
signify that the individual under scrutiny is not on their list of
nasty persons. DoD then assembles all the forms and issues
a clearance...which is still under the "need to know" and does
NOT automatically give them access to everything. Routine
stuff, done more for civilians designing and making equipment
than military personnel.

The only military communications people currently requiring a
Secret clearance are cryptographic MOSs and some military
intelligence MOSs. Crypto folks sometimes have to be cleared
for a Top Secret clearance, like a Secret but the FBI is tasked
with doing personal interviews of family, friends, neighbors,
former work colleagues (the "background check").

>When I later went to tech school most of the
>positions graduates landed in required NO clearance.

Oh? Dickiebird was an "operator with a secret clearance" for
TV studio broadcast work...THEN became an "operator?"

Between 1952 and 1960, the US Army required crypto MOSs,
some M.I. MOSs, and ASA MOSs to have Secret or Top
Secret clearances. ASA = Army Security Agency, later
folded into the general Military Intelligence grouping.
Clearances were sometimes required in other MOSs by
area/unit commanders for special circumstances.

> Most of those who went
>to secure positions were those of us
>who already had the clearance for it, usually career types. I finished out my
>second hitch and bailed.
> The work operators do is just as likely to be sensitive as that of technical
>types, more so at times.

Well, AFRS and AFRTS had "important" work to do but I
don't recall any pressing need for cleared TV studio people.
AFRTS used to be headquartered two miles down Glenoaks
Blvd from my house until moved out to a discontinued air
base. Was acquainted with some people there...none had
any clearances that they claimed. :-)

Kellie, all you seem to have done is APPLIANCE operating.
Where is the bs about kit building or homebrewing? If the
title of Appliance Operator fits you like a glove, don't bitch
about the tailoring.

>Nowhere in any of your
>posts in this sub-thread have you mentioned who *fixes* the radio gear
>these days.

Sometimes it MUST be done in the field or on the ship. FedEx
and UPS don't make runs into battle zones, ace. If it takes more
work than can be done on the scene, equipment goes to the
Depot...which is manned by military with the MOSs.

>Do RMs also do the radio bench work?

If necessary, yes. If time allows, yes. The military doesn't
operate in a casual environment where something can be
played with "on weekends." It can come down to the simple
choice of fix it NOW or die NOW.

>Toss up replacement antennas? Replace bad cable runs?

If necessary, yes, absolutely. Warfare may cause partial obliteration of any station or equipment system very suddenly. Can you relate to that or do you need a Sgt. B.D. to run you through his course? [re: Doonesbury comic strip]

In the US Army, field radio MOSs have been given "field expedient" instructions on HF antennas since over 40 years ago at Fort Gordon and elsewhere.

>Back a bunch of years ago when I was
>a Naval GSer and earlier Great Lakes churned out ETs who fancied
>themselves "the real radio professionals" and RMs were the appliance
>operators +/-.

"Naval GSer?!?" :-) A "GS-nn" is just a pay grade for a CIVILIAN employee, ace. You don't get a uniform or rank insignia or do sea duty or have to plod the field with grunts.

Tell us all about the Great Lakes Training Center for the USN, ace, like how was your boot camp like and how many storms did you weather on Lake Michigan while "churning out the ETs?" Did you know that the USN had other training centers?

What IS your "experience" in all that "churning out ETs?" Did your catapult task involve launching carrier pigeons?!? [US Army Signal Corps gave up on carrier pigeons after WW1]

>Does the ET rate still exist and if so where are the
>lines drawn among RMs, ITs and comms ETs?

See your friendly neighborhood recruiter, Kellie. You can get lots of nice brochures to Explain It.

The USN wouldn't take you in on a bet, Kellie. Had you served in ANY branch of the US military you would have found out that ANYONE has to be part of the work needed NOW. There are few "lines" drawn on who does what in emergencies, NO "unions" to "negotiate" tasks or pay.

>I ask because 19 months does not strike me as nearly enough time to
>turn the average raw gob into a soup-to-nuts analog & digital op *and*
>tech particularly considering the huge increases in the variety of
>technologies and compelxities involved in the systems used today vs.
>in yesteryears.

You are speaking from a black hole of ignorance of what makes up military communications systems. You can find out all the course syllabi on Army, Navy, Air Force electronics and communications MOSs for enlisted personnel. Nothing secret about the class lengths or content...except for some of the Military Intelligence courses. Even so, the Fort Huachuca M.I. school has published nearly all of those...and that school is

shared with Navy and Air Force training in M.I.

Had you ever been IN the military as an enlisted person any time from the 1960s to now, you would have found out that one doesn't have to design the equipment, just operate it, and be ready to do "field-level" maintenance as necessary. Such courses can be anywhere from five weeks to a half year. Depot maintenance is more advanced and requires ratings and MOSs commensurate with skill levels involved. Any time one HAS to fix something on board or in the field, it is done. Period. No one has the luxury of calling the manufacturer, waiting for any technical representative to show up, or leafing through old amateur Handbooks for "suggestions." It is fixed NOW or it is not used and a "work-around" system is used. All the ops have to KNOW what can be used in a work-around situation. They GET that training.

On top of all that, military communications people are in an environment where other military groups are striving to KILL them and DESTROY their equipment. They are given training for such contingincies and how to fight back. Now you show us where in your "expert" amateur radio experience someone tried to KILL you and/or destroy your station? Did you fight back with a rolled-up edition of Guns & Ammo magazine?

With all due respect, I must disagree. Mr. Baxter the one true leader in your ham radio. He fears nobody. He fights for his beliefs and never backs away. He never makes a promise that he does not keep.

The American Amateur Radio Association of which he is President is your one clear choice as a true democratic representative ham radio body. It welcomes all two-way radio people as members and works with all of them regardless of the radio service they represent.

The International Amateur Radio Network which he presides over is always "hours ahead when minutes count." When a communications emergency is declared it is Mr. Baxter's International Amateur Radio Network "Jump Teams" that are always first to arrive. No other organization is as well prepared or as responsive to human suffering!

Clearly, Mr. Baxter is a man amongst men. He desreves your respect and admiration. He has had mine since 1986.

Would you get a load of this dipschit ramble and rave? If one knew no better ya might get the impression he actually saw action at least *near* a battle front, and maybe DURING a war, instead of resetting circuitbreakers and replacing fuses and frayed AC cords in a rear area - WAY to the rear. In fact, clear across on the other side of the pond from all the action, it turns out, and even three years after all hostilities had ceased!!!!! What a *joke* HE is!! Funny, funny, funny. Phony, Phony, PHONY!!!!! to the max!!!!!!

And one *might* assume that he at least had some interest in ham radio since this IS a ham radio group, but NO! Not even a spark! He's just a bored, lonesome tragicomical old Geezerputz looking for love...and finding it only in the form of BurkeTheTurkey and Kimshe the TIT.....

Speaking of birds of a feather.........

Demoocratic? Who's the president/CEO? Who elected him? I'm an amateur
and I want an amateur radio association representing me. If the aara
works with other radio services, then they aren't giving me the full
representation I want.

>The International Amateur Radio Network which he presides over is

Corry:

Selecting a Vanity Callsign suffix which immortalizes Homer Simpson
is something which will have practically no impact on the ARS. However,
I am not the ultimate judge. After all, it was Riley Hollingsworth who
made the statement that Kim Walker's call sign had the potential to bring
the ARS "...one step closer to extinction."

I will say, however, that selecting a call sign based on Homer Simpson's
favorite saying, and making a point of ensuring that everyone knows why
you selected it, causes me to take you no more seriously than I do Kim.
But I'm not going to ask you to change your call sign, which, in itself,
is not offensive. You're stuck with it.

>> able to be doubted."
>
> OK. So tell me...[what is] so obscene or offensive about the
> phrase "how would it be able to be doubted"?

Don't be silly. When you said "how would it be able to be doubted",
you weren't being indecent--you were simply confessing. You were
saying, "My intent in choosing that callsign is perfectly obvious."
Which it is.

> Anything I ever say on the air can only be construed as "dirty"
> if the mind receiving it is "dirty."

Sorry, that doesn't wash. Nor is it original; it is the standard
defence of indecent behavior. The simple fact is that the ARS was
meant in part to provide a hobby I could share with my son, and you,
airing references to your various parts, undermine that purpose. You
know it does, and have confessed that such is in fact your intent.

But I've said all I mean to on this subject, and more than I should
have.

Kim:

This is the most despicable thing I've seen you post to date.

I'll stick my neck out a bit here and state quite emphatically that I, as one American citizen, could have well done without the events of Sept 11, 2001. And I rather suspect that I can get at least 2,991 "ayes" to that right away. I also believe that Saddam Hussein and Osama Bin Laden are two individuals that this world could very well have done without, for literally thousands of reasons. The fact is, Kim, we definitely DON'T "need all kinds of people to make the world." We can well do without some kinds of people. And, it just so happens, that YOU are one kind of radio amateur that the ARS can very well do without. And if you can even ATTEMPT to "philosophically" justify the existence of S. Hussein or O. B. Laden, I'm going to have to add that you serve no particularly useful purpose as a human being in general.

Why don't you move to Iraq and prove your point? I'm sure you'll be welcomed with open arms.

In case anyone is wondering how this got started, I'm reposting the message where Kim proudly quotes the response she received from Riley Hollingsworth when she attempted to get him to agree that she had a right to choose her callsign. Well, she got more than she bargained for. My original responses to her post are left in as well. Read on:

Subject: Riley sez Kim taking the ARS "One step closer to extinction"
From: yodoc@aol.comnospam (Larry Roll K3LT)
Date: 08 Jun 2000 14:37:47 GMT

In article <59B7203A07395FF0.50F2CC864D4ED7FE.54A4CB093D32584C@lp.airnews.net>, "Kim W5TIT" <kw5tit@hotmail.com> writes:

>
>Probably more a thoughtful wish of the prefix I wish I'd been able to get.

>Speaking of callsigns, here's Riley's response after I wrote and told him I
>was sorry for bothering him, since the FCC had already spoken on callsigns
>at the Dayton Hamfest (the rest of the email is also with it):
>
>While that's true, just because a person has a right to do something doesn't
>mean it's right to do it on every occasion. While the call sign may fit the
>constitution, for every instance where a parent or uncle or grandparent
>doesn't want a young person to get involved in Ham Radio because of
>something they hear on the bands, then you have taken the ARS one step
>closer to extinction. Then we can sit around and debate what happened to
>all those Amateur frequencies that industry bought at auction---debating, of
>course, on the internet and cellular because that'll be all we have left.
>The first amendment will still be alive and well, just as it is now, tho, if
>that's any consolation.

Interesting. Sooo, Kim -- are you going to change your call sign voluntarily, or are you going to, as Riley said, continue to take the ARS "one step closer to extinction?" Think about it!

Years ago, I would have fought tooth and nail to preserve every single kiloHertz of ham radio spectrum. However, because of the proliferation of so-called "hams" like you, Kim, I now support the concept of wholesale re-allocation of amateur radio spectrum to commercial broadcasting and utility communications services which can make much more productive, profitable, and socially beneficial use of it! As hams, we've blown it -- big time -- and you, your attitude, and your callsign are the best and most readily available example of every bad thing ham radio has become!

Sooo -- enjoy your callsign. The FCC won't force you to change it --
that is something that can only come from you -- should you decide
to become a Real Ham and stop giving the rest of us a bad image!
I have complete confidence that you can change if you want to -- but
the action to do so must come out of your decision to do what's
right for people other than yourself.

That's a rather extreme viewpoint and one I don't agree
with. Clearly the rational for morse testing existed up
and into the 70s...but began to diminish considerably
after that. Once the need for any possible back-up to
military or civilian morse operators dried up, the rational
for any mandatory code testing evaporated. At that
point, knowledge/skill assessment for morse as a mode
equalled that of any other mode...i.e. no requirement.

Cheers,
Bill K2UNK

>High
>> Exhalted Liar.

Actually, my current practice is to refer to Mr. Anderson as "Mr. Anderson". In the past I have used "Len". I see no point in calling names like "Putz" or various forms of "Liar". A person who posts an untruth here is not necessarily lying - that person could simply be mistaken.

However, one of Mr. Anderson's standard methods of debate is to make fun of others' names ("dickiebird"), callsigns, employment ("Nursie"), and military service ("Master Chief"), in an obvious attempt to get them to reply in kind. Which I have steadfastly refused to do.

Note that Mr. Anderson often exhibits such childish behavior without any provocation other than the expression of disagreement with his opinions, or the pointing out of errors in his postings here.

He also uses a variety of AOL screennames ("nocwtest", "lenof21", "lenover21", "averyfineman") in an attempt to disguise his identity.

Mr. Anderson has never held any class of amateur radio license, and, despite a claim almost three years ago of intending to get an Extra class license "right out of the box" has not yet done so.

Knowing all of this, it is a wonder that anyone bothers to respond to his posts.

>> One more reason to NOT let your babies grow up to be "proferssional
>> radio engineers".

>Whoa, let's not get too hasty here Steve and throw the babies out with
>the washwater. They might grow up to be REAL radio engineers which

[Mr. Anderson]

>is *NOT*.
>
>Lemmee 'splain for the record. There are engineers and there are

>digital, there is no middle ground. Some of the engineers who pop up
>in this NG include Jim n2ey, Cecil, Rick Tannehill from back when, all
>electrical engineers. I'm a mechanical engineer.

For the record:

I hold both bachelor's and master's degrees in EE. From (ahem) accredited
schools.

Cecil holds at least a bachelor's degree in EE. His master's degree may be in
EE. He probably has more than one master's. From accredited schools.
>
Rick Tannehill, W7RT, holds at least a bachelor's in EE. He is also a PE
(Professional Engineer). Note the capitalization.

In many states, calling yourself a "Professional Engineer" without a PE is
against the law.

>There are engineering support folk out there who may or may not have
>formal technician-level educations in the assorted disciplines who
>conventionally work under the direction of engineers.

[Mr. Anderson]

> is one
>of those. They are *not* engineering professionals.

Since Mr. Anderson says he is retired, he is not employed by anyone, and by
that definition, is not a professional anything.

> Not only that but
>there is no such thing as a "radio engineering" discipline.

In the first half or so of the previous century, "radio engineering" was a
common term. There existed an organization called the Institute of Radio
Engineers (IRE) and many books were published on "Radio Engineering". "Radio
Engineering" was a subspecialty of electrical engineering, like electrical
power engineering or computer engineering.

But by the 1950s the term "radio engineering" fell into disuse. It was replaced
by the broader term "Electronic Engineering". The IRE became part of the IEEE.
The term "radio engineer" became obsolete, defunct, outdated about a
half-century ago. Talk about living in the past....

>Bottom
>line here is that

[Mr. Anderson]

> trying to pass himself off as a
>"professional" anything let alone a "professional radio engineer" is
>absolute total

[pool-pah]

> at the oxymoron level.
>
Perhaps. If one wants to play dictionary games, "professional" simply means that one is paid money to do something. By that definition, most of us can claim a long list of "professions". Example: Someone once paid me good money to cut some pieces of wood and nail them together, so I'm a "professional carpenter" by that definition. Make up your own list - it's fun!

>And beyond that there are state laws which prohibit anybody from
>advertising themselves as "professional engineers" unless they're
>first qualified to take then have passed the state professional
>engineering exams. Yeah, right, like

[Mr. Anderson]

> has a California PE
>ticket to practice "professional radio engineering" . . Bwaahaha!

I don't think any state even grants PE licenses in "radio engineering"
>
>So if the baby grows up and decides she wants to do professional radio
>engineering for a living fer chissake Steve please don't use

[Mr. Anderson]

>as an example of why she shouldn't go for an EE degree, ship her off
>to a decent engineering school.

Good advice.

>> >...wants to dismiss/denigrate other radio activities in
>> > attempting to "compare" occupations with avocations.
>>
>> Of course this is interesting...coming from a guy who tries to make
>> himself look noble by associating himself with Soldiers who died in combat
>> 3 years before he was "in-theater".

What is being missed here is that it is Mr. Anderson who wants to compare commercial and military radio practices with those of amateurs, while ignoring the blindingly obvious differences between the purposes and resources of various radio services.

>Hey Jim: The answer is Rose Hill Cemetery, Hagerstown, Washington
>County, Maryland, USA
>
Absolutely correct. If I ever get there, I will pay a visit of respect.

Historical fun fact: Early US radio amateurs were unlicensed because the govt. did not require licenses until 1912. There were only a few thousand stations of

all kinds on the air in the entire country in those times, discounting simple spark-coil stations capable of only local communication. The radio laws of the time were simple because the radio law requirements of the time were simple. Not so today!

the
>other side of the pond from all the action, it turns out, and even three years
>after all hostilities had ceased!!!!! What a *joke* HE is!! Funny, funny,
funny.
>Phony, Phony, PHONY!!!!! to the max!!!!!!

The Korean War was as much a war as any other war. About 37
thousand Americans lost their lives in that one. It started in June,
1950 and hasn't ceased...a truce was agreed to in July 1953 but
there has never been an ending to the Korean War. Why do you
wish to dishonor 37 thousand Americans who died and the many
more thousands who served in the Far East?

I enlisted on March 13, 1952, and was sent to the Far East in
January, 1953. How much time is there between January and
July, dickiebird? NEGATIVE time from hostilities ceasing.

The distance between Chongjin, North Korea and Tokyo (where
I was assigned) is about 500 air miles. The distance between
Vladivostok, USSR, was about the same distance. That's about
an hour's flight in a Bear (NATO name for a Soviet bomber). Less
time of flight now with jet turbine aircraft.

"The Pond" is a Brit colloquialism for the North Atlantic. That
does not apply to the Sea of Japan, the only body of water
between Japan and the Korean peninsula.

My MOS in 1955-1956 was 281.6 standing for microwave
radio relay operations and maintenance supervisor (the decimal
six in that old MOS coding referring to a supervisor). That is on
record at the National Archives and Records Administration. If
you have a verifiable need to know (instead of slinging shit on
ex-GIs), you can obtain that information. Note: Maintenance
duties include a number of things which include "resetting
circuit breakers" and "changing fuses." However, the actual
duties were far more complex than that. I don't recall any

"frayed power cords" although that might have been a problem
stateside (common problem in Missouri?).

The question which still goes unanswered is WHAT DID
DICKIEBIRD DO IN MILITARY COMMUNICATIONS AND
WHERE DID HE DO IT IF HE DID?

DICKIEBIRD HAS NOT TWITTERED A PEEP ON THE
ABOVE...except once to say he was "at Fort Monmouth
attending a Signal school on TV and Radio production."
Yah, like AFRS (later AFRTS) "needs" Secret clearances
to make broadcast kinescopes! Another ignorant blowhard
puffing away fantasies...that never really happened.

> And one *might* assume that he at least had some interest in ham radio since
>this IS a ham radio group, but NO! Not even a spark! He's just a bored,
lonesome
>tragicomical old Geezerputz looking for love...and finding it only in the form
of
>BurkeTheTurkey and Kimshe the TIT.....

Poor baby! Dickiebird cries and cries, swearing and
puffing because his "arguments" in here aren't logical
or based on any known reality. Dickiebird belongs to
genus of Red-Faced Beeping Puffin, a common noisy
bird endemic to the eastern and middle western USA.
They frequently inhabit chat rooms, trying to imitate
mockingbirds by stealing others' songs as their own,
are angry and quarrelsome, unable to get along with
other birds.

Red-Faced Beeping Puffins are not on the endangered
species list of naturalists but are protected and
nurtured by environmentalists of Newington...and no
one is certain why. "Is a puzzlement."

There is no need to feed Red-Faced Beeping Puffins.
They live on hot air, frequently belching noxious
stomach gas while twittering nonsense. It is amusing
to watch them flap and jump on thin branches just
before the branch breaks sending them to the ground.

Well, Jim, N2EY, asked me what other changes
could be made to licensing requirements in
a positive, pro-active manner. I just thought
I would state my feelings about it.

I'm generally in favor of things that encourage
hams to be good RF citizens (whatever those are)
and watch things like harmonics and unintended
mixer products. I do think it's important for
hams to understand these matters before they
crank up the kilowatt-level transmitters they
are licensed to build and operate.

You've made it quite obvious why you've never managed to spend much
time with any employer. I notice that you "conveniently" forgot to
include yer gig at NADC Johnsville in the above list. Putz. What
"title" did Johnsville bestow on you on yer way in and not much later
and under what condx did you find yourself out pounding the bricks
again looking for yer next gig? Hmmm?

The Back Channel dwellers know . . Go for it Putz . .

> I've worked all my adult
> life and have collected a "good" amount of money. That's a
> definition of professional.

There was a retired trash collector who worked for the Borough of
Clifton Heights PA for thirty who passed away recently and left a half
million bucks to his church.

> A state
> Professional License is largely a legal document

Yew bet it's a "legal document". And if you violate the provisions of
the licensing laws by calling yourself any kind of engineer or
offering to do any kind of "engineering work" or offering to provide
any kind of "engineering services" when you ain't one you can get

busted. You're in violation Putz.

> . . . Academic degrees aren't even a governmentally-
> controlled accreditation, but are acknowledged by common
> consent and may included in government title definitions.

So I reports to my new boss on my first day as a USN snivel service kid graduate engineer with a three-day-old diploma. To the guy who ran the Shipboard Launcher Div. (steam cats) Advanced Development & Design Section. Sez Ken, "Hey, you were's yer diploma?" "Jeez,it's home, why?" "Ah, personnel screwed up again, go home and get it kid. I can't issue yer clock number until I actually see the paper." A buncha year later my new boss at DuPont did the same drill on me when I hired aboard with him. Had a helluva time finding the frigging thing that time . . yeah Putz, every once in awhile them there puffy academic thingeys just might have some draft.

> Neither have I mentioned the academic institution
> which granted me a degree...

Bullshit again Putz, you have any accredited baccalaureate degree in anything like I'm the King of England. You can wiggle, you can squirm, you can toss out chaff by the ton but in the end it doan work. We all know what you is and what you ain't. You're just a worn out old electrical jobbie still trying to be what you never was and never will be.

> which was so late after starting
> to DO things in engineering (relative to the status-symbol

When was the last time he made that statement? Do you know if he's tested since that time? How would you know if you weren't keeping tabs on him?

I used "Isuzu, Mitsubishi, Daihatsu" with a JA operator when standard
"fonetics" didn't work.

(1) In order to get the Extra, he would have had to complete the
Technician and General class writtens first. Why would he get a CSCE for the
writtens and NOT get an NCT license?

(2) "Checking up" on him is no great feat. Just go to
www.fcc.gov/wtb/uls/loser

Hey Putz - Did you ever actually *see* a Soviet Bear in flight during
a major conflict? Did you ever have one fly 750 feet over yer head?
Have you ever actually seen one in flight under any condx? Of course
not.

I did Putz. From the flight deck of the CVA 63 during the Vietnam
brawl in 1965. Sumbitch flew right down the centerline, I got off a
half-dozen exposures of the thing.

That was the first time. Then there was the time I got to watch a game
of "tin can chicken" played between one of theirs and one of ours a
couple thousand yards off the port quarter of the Sara with MIGs on
the screens in CIC.

"Under the threat" from 500 miles out . . whatta hero you was . .

And I was just a frigging *CIVILIAN*!

PUTZ.

Not me! I noted the inconsistency of the conservative mindset that
makes for a contradictory stance where some people argue for continued
guvmint restrictions via the fcc via the Morse code test.

I'm a strict MOR guy myself. (that means I think about the issue at
hand before taking the "party line") Sometimes I seem Republican, and
other times like a Democrat.

<snippage:

>>>It would be interesting to see the appropriate stats on that. PA is going

>>>younger drivers have a disproportionate share of problems behind the wheel.

That is a wonderful way to eliminate totally the accident rate for that
group - save for licensless joyriders.

Of course, we only transfer the high accident rates to older first-time
drivers. Perhaps we should increase that Minimum driving age to say 50
or so, that is when people start to act in a mature manner toward

preserving they own skins! 8^)

In today's world, why not? you want a divorce? That's a felony - 15
year minimum sentence with no possibility of parole! ;^)

Not at all surprising. I think it makes them "experts" on the problem.
We live in a world where celibate priests (har!) hand out marriage
advice and counseling. Why would not the more divorce prone people know
more about what it takes to stay married?

Atheists and agnostics don't have "instant forgiveness" to salve their
conscience when they do immoral/antisocial acts. So they tend to behave
themselves.

Well, when you put it *that* way! 8^)

> Should I be ashamed of my license class and callsign because somebody might not
> like it?

No, it's just one of those "getting along" things.

All this got started with a fellow who made Extra with zilch HF operating experience and it showed. Had a vanity call sign though. At some point an OM got frustrated with him and gave a gentle but not uncertain upbraiding. Whether he should have or not is one thing, but I agreed with him that if you are going to be an extra, you should have some sort of experience in the hobby. Just a matter of expectations.

Which brings me to something I do wish the FCC would require again. That is a minimum time between General and Extra. (Ducking now) Obviously the General won't be a ticket with HF experience, but to make it to Extra when you've never operated an HF rig (along with no associated clue) is ludicrous.

Jim I certainly agree with that as a goal, as surely as the FCC does. But I know that most hams, especially new hams and those with no further technical training than they get for license testing, won't be able to function very effectively at that level without lots of Elmer help, and there's nothing new in that, of course. As noted it doesn't seem to be causing a problem that makes it to our attention.

I learned about harmonics early in my ham career when as a newly minted Novice running a homebrew 30 watt two-tuber on 40 meter CW

I received an "advisory notice" from the FCC monitor station in Brownsville TX that they had heard my second harmonic in the 20 meter ham band where I wasn't authorized. No answer was requested, but it sure got me into learning about too-tight coupling between final and antenna at an early stage.

And of course such things can easily happen when things are "normal". When conditions are good it takes very little RF to make it across the country on HF, and most all rigs will output some level of harmonics even if a very small amount, though probably less today than then.
The QRPP guys learned about all that early on.

73, Dick

Of course you did, Admiral. Civilians are always present in
Combat Information Centers, aren't they? :-)

[Kellie's been glued to certain TV channels too long?]

>"Under the threat" from 500 miles out . . whatta hero you was . .
>
>And I was just a frigging *CIVILIAN*!

"Frigging" is an old term referring to sodomy. That's punishable
under the UCMJ on board a warship in times of war.

It's not a nice thing to admit in an amateur radio chatroom which is supposed to be a "family activity" suitable for children [see sermons by Pastor Budney in here].

Let us know what week your story appears on JAG...

Kellie is invited to look up the frequency range of AN/TRC-8 radio relay receivers and transmitters used in the US Army of the late 1940s through the 1950s...not to mention the US amateur radio regulations in effect 1952. :-) :-) :-)

>You've made it quite obvious why you've never managed to spend much
>time with any employer. I notice that you "conveniently" forgot to
>include yer gig at NADC Johnsville in the above list.

I was a visiting staff engineer for RCA Corporation at the Naval Air Development Center, Warminster, PA, intermittently from 1972 through 1973. NADC was the contracting agency for a DoD sponsored R&D program designed and developed by RCA Corporation. At no time did NADC, the USN, or the Department of Defense ever compensate me personally for that work. My salary and expenses were paid entirely by the RCA Corporation.

>Putz. What
>"title" did Johnsville bestow on you on yer way in and not much later
>and under what condx did you find yourself out pounding the bricks
>again looking for yer next gig? Hmmm?

My employment at RCA Corporation was continuous from 1968 through 1975. 1972 through 1973 was in the middle of that time span.

>There was a retired trash collector who worked for the Borough of
>Clifton Heights PA for thirty who passed away recently and left a half
>million bucks to his church.

Did Kellie put on his religious garb and collect any of that?
:-)
The $2K-plus for that JRD SWL receiver had to come from
somewhere...

>Yew bet it's a "legal document". And if you violate the provisions of
>the licensing laws by calling yourself any kind of engineer or
>offering to do any kind of "engineering work" or offering to provide
>any kind of "engineering services" when you ain't one you can get
>busted. You're in violation Putz.

Incorrect. Kellie is invited to read California Law in regards to
titles of professions and professional license provisions.

I've done nothing illegal in my work in California from 1956
through the present date. The "made-it tuff guy" wannabe
is still spouting incorrect personal insult charges... :-)

>So I reports to my new boss on my first day as a USN snivel service

>thingeys just might have some draft.

Nice attempt at literary colloquialisms in philly cheese-steak
patois, but don't give up your day job at the bearing factory.

Don't be overly disturbed if the Writer's Guild of America or the
Movie or TV Academies don't nominate you for writing awards
this year.

>Bullshit again Putz, you have any accredited baccalaureate degree in
>anything like I'm the King of England.

Your supreme majesty is most kind, speaking down to one
of the common folk from his white throne.

I do wish His Majesty would go to the bathroom in private...
or at least get one of the newer energy-efficient models
that don't use so much water when flushing.

>... You're just a worn out old
>electrical jobbie still trying to be what you never was and never will
>be.

"Electrical jobbie?!?" :-)

Tsk, tsk, tsk...from the "beeper on 220" who used "ARC-5 JEEP radios [sic]" and was able to magnify his ONE patent (on bearings) into TWENTY-SIX in a few keystrokes! And the one who thought his SWL receiver used all 40 bits for DSP when he didn't know squat from snit about basic DSP, A-D conversion, or resolution.

Yes, Kellie is one of the Royal supreme who prizes morse-manship as the very pinnacle of amateur radio nobility, the mark of excellence in 1930s. Somebody please wake up His Majesty. This is the year 2002.

>PUTZ.

The word "putz" is a Yiddish-ethnic pejorative loosely trans-lated to American-English as "dickhead." Speaking of that, how's your prostate problems? I have no problems there.

>others' names ("dickiebird"), callsigns, employment ("Nursie"), and military
>service ("Master Chief"), in an obvious attempt to get them to reply in kind.
>Which I have steadfastly refused to do.

I honor Hans Brakob's USN rank title (Master Chief) when he
uses it in reference to his military exprience and duties in the
USN. I've also used "Super Chief" in reference to his sometimes
CIVILIAN activity of red-balling (railroad term referring to direct,
high-speed train travel) certain comments. Those are different
"title" names.

The original Master Chief versus "Chief" minor dispute (of at
least two years ago) came from my quoting an iconic phrase
popularized by the TV comedy show "Get Smart" that was
"Sorry about that, chief." :-) [the "chief" referring to the
fictional head of a "secret" spy agency] It's rather obvious

that other denizens of this little din of inequity have a limited
capability for humor and cannot abide having their lofty,
exhalted, noble noses tweaked from time to time... :-)

>Note that Mr. Anderson often exhibits such childish behavior without any
>provocation other than the expression of disagreement with his opinions, or
>the pointing out of errors in his postings here.

Tsk, tsk, tsk. What "errors?!?" "Errors of opinions?" Is there
a "correct" opinion mindset that "must" be observed at all times?

Of COURSE there is! It's obvious! A devout, almost Puritan
Belief in the Credo through the encyclicals and edicts handed
down from the Temple of St. Hiram since Time Began! :-)

>He also uses a variety of AOL screennames ("nocwtest", "lenof21",
>"lenover21", "averyfineman") in an attempt to disguise his identity.

"Disguise?!?" :-) :-) :-)

Readers of Ham Radio Magazine have my name and address
printed as the byline of every article I've written for them:

Leonard H. Anderson
10048 Lanark Street
Sun Valley, CA 91352

That's my current USPS mailing address. It also appeared in
both the periodical and the book "Simulations" by BYTE
publications. I make no "secret" of it. :-) :-) :-)

>Mr. Anderson has never held any class of amateur radio license, and, despite a
>claim almost three years ago of intending to get an Extra class license "right
>out of the box" has not yet done so.

Obviously this "critic" (severe in his effort to achieve "the right
attitude" about his beloved amateur radio) cannot differentiate
between the English words of "could" and "will." :-)

This rather anal-retentive "critic" absolutely requires the
imprimateur of a federally-granted radio amateur callsign
in order to "be recognized" by his Holy Order of Amateurs,
loftier than the rest of the radio world. Can he recognize
another English word: Snobbery or Self-Grandeur? :-)

>Knowing all of this, it is a wonder that anyone bothers to respond to his
>posts.

It's a wonder that Mr. N2EY can exist within the confines of
his virtually elite world of amateurs, given the apparent size
of his ego and many virtual wounds received in here... :-)

>For the record:

...an all important requisite considering Mr. N2EY was not under
discussion in this sub-thread. :-)

>I hold both bachelor's and master's degrees in EE. From (ahem) accredited
>schools.

NOT a requirement for a US amateur radio license.

Trolling for a revelation of the university granting mine? :-)

>Cecil holds at least a bachelor's degree in EE. His master's degree may be in
>EE. He probably has more than one master's. From accredited schools.

Cecil Moore is no longer a regular in this chatroom. An academic
degree grant is NOT a requirement for a US amateur radio license.

>Rick Tannehill, W7RT, holds at least a bachelor's in EE. He is also a PE
>(Professional Engineer). Note the capitalization.

Rick Tannehill is not a regular in this chatroom. An academic
degree grant is NOT a requirement for a US amateur radio license.
A Professional Engineer License is not a requirement for a US
amateur radio license.

>In many states, calling yourself a "Professional Engineer" without a PE is
>against the law.

True. California is one of those states. The reference should be
to a Professional Engineer LICENSE granted by a state.

Trying to make an "important" distinction between "professional"
in the generic sense and "Professional" (capitalized) in regards
to Professional Engineer License is just blatant misdirection.

The generic word "professional" refers to service rendered in
exchange for pecuniary compensation. The word "amateur" in
reference to US amateur radio (Title 47 CFR, Part 97) refers to
those who engage in a radio activity NOT for pecuniary interest.

Those who chastise or villify professionals (of the generic sense
as in accepting money for services rendered) are emotionally
confused (as in overmuch self-pride or grandeur fantasies) are
the ones with psychological problems.

There is absolutely nothing in Part 97, Title 47 CFR, prohibiting
professionals in radio-electronics from engaging in commerce
of amateur radio equipment or in services rendered to others
EXCEPT as expressly defined in radio activities codified in
Parts 1, 2, 97 of Title 47 CFR. Nowhere in Part 97 is there any
prohibition for or against professionals (generic sense) from
engaging in defined and allocated amateur radio activities.
Nowhere in Part 97 is there any requirement for or against
professionals as to obtaining any US amateur radio license.

The misdirection on different meanings of "professional" is just
a diversion, a smokescreen to avoid criticsm against the

personal desires of certain individuals.

>Since Mr. Anderson says he is retired, he is not employed by anyone, and by
>that definition, is not a professional anything.

"Retired" is used in a general sense referring to not working for an employer other than self. "Retired" in the sense that "regular hours" (as defined by an employer) are not required. It should be noted that the Social Security Administration accepts self-employment as a legal occupation. So does the IRS, Franchise Tax Board of California, and Los Angeles County and City, all duly informed on the pecuniary compensation received after becoming self-employed, retired from regular hours for an employer.

There is nothing in Part 97, Title 47 CFR, for or against anyone obtaining a license for or engaging in defined amateur radio activity as to employment. Ergo, there is no such distinction.

Mr. N2EY and Mr. w3rv belabor the "professional" word because they have no other weapon in their morse code issue viewpoint. To satisfy their egos they must attempt personal pejoratives against those who do not share their personal views.

>But by the 1950s the term "radio engineering" fell into disuse. It was
replaced
>by the broader term "Electronic Engineering". The IRE became part of the IEEE.
>The term "radio engineer" became obsolete, defunct, outdated about a
>half-century ago. Talk about living in the past....

...and some radio amateurs insist on on-off keying morse code as signifying the elite, the pinnacle of the skilled in amateur radio. Very much a "living in the past" for those who insist on that demonstrated skill in US amateur radio licensing in this new millennium.

>What is being missed here is that it is Mr. Anderson who wants to compare
>commercial and military radio practices with those of amateurs, while
>ignoring the blindingly obvious differences between the purposes and
resources of
>various radio services.

Mr. Anderson has not "compared" so much as trying to educate an obviously ignorant group of hobbyists who had no grasp of the scope, techniques, or skills required in the greater world of commercial and military radio.

There is no "blinding obvious" except in the sense of too many amateurs being blind to most of the rest of the radio services. Those who've had tunnel vision all their lives don't see anything besides the tunnel.

>>Hey Jim: The answer is Rose Hill Cemetery, Hagerstown, Washington
>>County, Maryland, USA
>>
>Absolutely correct. If I ever get there, I will pay a visit of respect.

Feel free to join them at the earliest opportunity. :-)

>... The radio laws of the
>time were simple because the radio law requirements of the time were simple.

Radio laws of 1896 through 1911 were supremely "simple."
They didn't exist. :-)

>

Well, JJ, attention doesn't come from just truckdrivers and I'm not sure
they or I appreciate the attempt at a negative connotation, there. It
always impresses me that someone wants to call someone else's taste into
question while their own prejudices are showing through with flying colors.

Something else: I don't have to write on the side of my truck "I have big
tits." I have had to deal with them as a reality since I was 11 years old,
thank you very much. I doubt you'd find many large-breasted women who
really like carrying around large breasts (tits--whatever). Let me say that
I have been in a huge variety of situations professionally and personally
and, most people--men and women, contrary to the way you like to
believe--notice about me first, my breasts...tits, whatever. So, I "have
fun" with the situation. To you, it shows poor taste. What is poor taste
about the human body, I can't relate to...unless it were cancerous or
rotting or something like that.

So, for you to attempt to "call me out" on my tits and my callsign fails
miserably in the history I have had with *my* tits. I don't have my
callsign "for attention" as you like to diagnose. My tits do that for me.
I have my callsign for a lot of reasons, chief among them because I jokingly
told my fellow hams one day (all men, of course) that it was silly to get
initials for a vanity callsign--one should put some real punch into a vanity
callsign. They asked me what I would get. I told them (this was on the
air, by the way) that I would get something like KC5TIT. We all laughed and

went on. It was my husband that, a few months later, discovered W5TIT was available. I went ahead and got it. I enjoy it. You don't. I don't enjoy a lot of things I hear on ham radio--or even some of the people who are considered my peers as hams.

So have a lot of other women, and they don't go out of their way
to bring attention to the fact, and manage to deal with it in good
taste.

I doubt you'd find many large-breasted women who

The reason you got the callsign is an attention getter, it is in
very poor taste no matter how you attempt to justify it.

Life really got interesting when a Novice on 3.725 pumped his second harmonic out on 7.450 . . A buddy of mine from back then got a long-distance phone call from an FCC guy telling him he had this problem. The FCC guy wasn't nasty or "official" about at all, he was simply trying to be helpful. In my own case the neighborhood FCC examiner lived only 3/4 mile away and let me know I had key clicks and later that my "always on" vfo was leaking to the antenna. But he pointedly did not ream me a new one for using a VFO in the first place. He never brought it up until until I showed up in his office and sat for my General at which point he referred to me several times as "Swisher" with a sneer. Nailed.

This was the same examiner who showed up at a local club meeting and asked if anybody was interested in taking "practice Extra exams for the helluva it" after the meeting. I wasn't there but it's a local legend. Either six or seven took the test and passed, only one did not pass. Then he congratulated them for becoming Extras that night. Snookered 'em good!

I have no idea what the current crop of FCC of "listeners" is like today or if they would handle ham bloopers the way their predecessors did, I've never gotten a "little note" from one myself or heard about any others for years. But I seriously doubt that hams today churn out the gross volumes of RF garbage we did based on the fact that first precious few rigs on the air today have been homebrewed or came out of the surplus channels and second that type acceptance has to have had a huge impact in this repect.

Type acceptance? What type acceptance? Except for HF amplifiers there is no type acceptance in amateur radio (that I know about). I've been wrong before, but I think that the lack of a "type acceptance" requirement (or certification) seems one of the last distinctions between us and all those "unlicensed personal radio services".

Maybe the QCAO is winning after all.

You'll find that the FCC does indeed require approval of any new ham radio transciever marketed. They don't characterize it type acceptance on the same basis that non-hamradio gear is, or was, approved for marketing.but there is a formal approval or acceptance certification issued. If you watch the ads for soon-to-be-released for market HF rigs sometimes the fine print says "not yet approved for sale by the FCC" or similar language, signifying that the piece hasn't yet been checked out and finally approved. Exactly what that procedure involves I don't know. And of course it doesn't apply to amateur-built equipment.

>
>
> Maybe the QCAO is winning after all.

Quarter Century Appliance Operators? Winning what? That rule probably keeps them out of trouble they'd likely have it it wasn't there. Some manufacturer would cut the wrong corner to save a few cents and the ham wouldn't be able to detect the problem being caused. It would be the same situation that exists where consumer electronics mfgrs refuse to install AC line filters that would eliminate 99% of RFI caused to household electronics by transmitters. The savings amount to pennies but they don't care.

Uh-huh. Me and my call have gotten along just fine for 25 years now. Nobody I
respect has a problem with it. I earned the license and the callsign that goes
with it. Somebody doesn't like it, tough noogies.

> All this got started with a fellow who made Extra with zilch HF

That's their problem, not yours.

How much experience is needed before one gets a 1x2? Why must it be on HF?
>
> Which brings me to something I do wish the FCC would require again.
>That is a minimum time between General and Extra. (Ducking now)

No need to duck.

>Obviously the General won't be a ticket with HF experience, but to make
>it to Extra when you've never operated an HF rig (along with no
>associated clue) is ludicrous.

They dumped the experience requirement over a quarter century ago. Still, I think it's a good idea.

What I'd like to see is three classes of license, but arranged in a more logical manner. Say Basic, Intermediate and Full, or some such names, with increasing power levels, modes and freq privs with the higher classes. But with significant access to HF for all classes. And a year experience requirement for each upgrade.

I say, get your 1x2 or 2x1 now, while there are still some available.

GREAT STORY! Twarn't no air show, neither, I bet.

Not much anyone can add to that, except:

- The airline distance from Chongjin, North Korea to Tokyo is at least 670 statute miles. The distance from Vladivostok to Tokyo is 663 statute miles. (Source: "Esso War Map III, Featuring The Pacific Theater", printed 1944).

- For interesting info on the Tupolev TU-95, and its variants, known to NATO as the "Bear", see:

http://www.fas.org/nuke/guide/russia/bomber/tu-95.htm

- Development of the TU-95/"Bear" began in June, 1951.

- First flight of the first prototype, November, 1952.

- Production began January, 1956.

- First deployment August, 1957.

- Four turboprop engines driving counterrotating propellers. "Turboprop" refers to jet turbine engines driving propellers.

And only the contemporary is thus of any real importance. We see.

Never mind the obvious fundamental functionality of basic OOK keyed Morse code on radio, both to transmit and receive as only the most basic system can be.

What that says is that ham radio is now reduced to a bunch of yakking conversationalists with nothing in mind but their ease. If that's the case our valued spectrum has just became much less worthwhile allocated to us and of much more value to Uncle Sam to spend the proceeds of the auction on an bottomless pit of unfunded projects. It'll happen, as it should.

> .
> nor has it been a basic or building block of non-ham radio

>
>Life really got interesting when a Novice on 3.725 pumped his second
>harmonic out on 7.450 . .

Which showed the lack of wisdom of the FCC way back in 1951, putting the 80 meter Novice band where they did.

40 meter second harmonic was a classic Novice problem. Three causes:

1) Poor second-harmonic rejection of rig and antenna
2) Mistakenly tuning up on the second harmonic
3) Using 80 meter crystal on 40

More newbie-proof transmitter designs eliminated 1 and 2, and VFO pretty much eliminated 3.

FCC approval of ham rigs is in large part certification that they meet the spurious emissions requirements. Once upon a time, the requirements simply called for "transmitters of good engineering design" or some such verbiage, with no numbers attached. Today all spurs must be down a certain number of dB (exact number depends on power level and other factors) before a rig can be sold commercially. Homebrew is exempt from certification, but if there's a complaint and your homebrew rig doesn't meet specs, it's off the air.

>But I seriously doubt that hams today churn out
>the gross volumes of RF garbage we did based on the fact that first
>precious few rigs on the air today have been homebrewed or came out of
>the surplus channels and second that type acceptance has to have had a
>huge impact in this respect.

Never a problem with all the homebrew rigs here at N2EY!

That pretty much says it all, Putz Jr. If you can't have it for the asking someone is surely mistreating you and setting up "hoops". Gotta live in the world of gimme, gimme. So you just go on and ask for Lennie the Loose's callsign......Mine isn't likely to be on the market for awhile, sorry. Yours will probably be available first since you don't have the good sense to get out of your own way.

Len's "losing it" has nothing to do with obtaining an amateur radio
callsign.

Dave K8MN

That's only true if the sole reason for high accident rate is
inexperience. Stats say different. That's why the insurance rates for
a new driver who is 18 are so much lower than those for a new driver
who is 16. And it's why teenage girls' auto insurance rates are lower
than boys' of the same age and driving experience.

> Perhaps we should increase that Minimum driving age to say 50

Makes a lot of sense - but consider this: Since atheists/agnostics theoretically don't fear divine punishment of a bad afterlife, you'd think they'd be most interested in a happy here-and-now. So they'd be most likely to bail out of a relationship as soon as it goes a little sour. But the stats say exactly the opposite.

Go figure.

Old adage: Antennas put up in the dark, or bad weather, or in a hurry,
always outperform those put up under good conditions. Gotta be cold
enough that you leave chunks of your frozen hide stuck to the metal
here and there.

I don't have either. Price difference alone may be enough to make the
decision for you. If the '718 does what you want, go for it.

GREAT! And this is after a few weeks of not-even-every-day practice.

I dunno about the musical stuff. I can't carry a tune in the
proverbial bucket.
But perhaps there is a connection in that musicians are used to the
idea of communicaion via modes other than talking and writing. And
they accept and readily use systems that were not invented within the
past two weeks.

The trick now is to practice whenever possible. Play the
tapes/CDs/computer whenever possible, as background music. And the way
to increase speed is to copy code that is going so fast that you only
get about 50-75% copy. When you start to get 80-90%, up the speed to
where you're in the 50-75% range again.

After struggling to copy 13 wpm for 10-15 minutes, 7-8 wpm sounds
incredibly slow. Pretty soon 13 wpm will sound slow. Etc.

Only you can answer that one. But by the time you go for the code
test, you may be ready for the written anyway. Remember, too, that a
CSCE is only good for 365 days.

Reason I mention it is that many folks, including myself, have wound
up with higher-class licensessimply because somebody said "try this
while you're here".

Could it be because as atheists/agnostics they don't feel the
need to get married in the first place? If you don't marry
you don't have to divorce, just walk away.

Yes...GREAT STORY! It should be written up in Soldier
of Fortune or Guns & Ammo magazines.

>Not much anyone can add to that, except:

...the designer of the K2 has to butt in...

>- The airline distance from Chongjin, North Korea to Tokyo is at least 670
>statute miles. The distance from Vladivostok to Tokyo is 663 statute miles.
>(Source: "Esso War Map III, Featuring The Pacific Theater", printed 1944).

That's nice...a demonstrated capacity for reading books
about an era before your birth?

What is the distance from Vladivostok to Pennsylvania, any
part during the Cold War? Were you at either end wearing a
uniform, issued dog tags and a sidearm at that time? How
does it feel to be at one end of an hour's flight time from
another country that had weapons of mass destruction?

You weren't there, were you? All you can do is bring up a lot
of picayune details, misdirecting the subject thread and
implying insult to anyone who was a member of the military
forces of the United States...all because your EGO is hurt in
some perceived battle of words in a newsgroup.

>- For interesting info on the Tupolev TU-95, and its variants, known to NATO
>as the "Bear", see:

So, how was your military service as a member of NATO?
Which NATO country's military did you serve?

How does that apply to POLICY of US amateur radio and the
morse code test issue?

>http://www.fas.org/nuke/guide/russia/bomber/tu-95.htm
>
>- Development of the TU-95/"Bear" began in June, 1951.

Is that a factoid necessary in amateur radio in any way?

>- First flight of the first prototype, November, 1952.

Was that highlighted on ARRL news in QST?

>- Production began January, 1956.

Who built it...Hallicrafters? National Radio? Collins?
Pye? Marconi? Elecraft?

>- First deployment August, 1957.

Was it deployed in USSR ham stations? Did morse
operators fly it? If so, what class of amateur radio
license did they have? What was its amateur callsign?
Was it recognized by the IARU? Did it have written
permission from a DX buro to operate in deployment?

Perhaps you can come up with some popular song of
the Cold War era and have a nice discussion on that,
chock full of references to amateur radio and the "most
basic form of amateur communications."

Perhaps you can come up with a discussion of military
railroads on the eastern seaboard, their history and
details as applying to Soviet or other amateur radio and
the beloved and revered morse code test?

Perhaps you could join a protest march to Arlington and
spit on the graves of some of the 33,667 of US military
who died in battle during the Korean War...or hundreds of
other military personnel who died while serving their
country, the United States of America, during the Cold
War? Perhaps you would just like to make fun of anyone
who served in the US military? It doesn't seem to mean
anything to a civilian, does it? Certainly not in the vast

importance of maintenance of old standards and the "right attitude" in US amateur radio...

Thank you for answering all of those questions, comrade.

Dickiebird is lost in a time-travel vortex. His definition of
"contemporary" is anything high-tech in the decade of the
1930s. :-)

> Never mind the obvious fundamental functionality of basic OOK
>keyed Morse code on radio, both to transmit and receive as
>only the most basic system can be.

"Most basic [radio] system" is a crystal set and spark
transmitter.

Oh, yes, I forgot..."spark" was outlawed right after
dickiebird got his sequential extra callsign.

Tsk, tsk, tsk...nihilism in an avocational radio activity?!?

That's NOT the Amateur Way!

>> nor has it been a basic or building block of non-ham radio
>> communications for at least a decade or more.
>
> Which has nothing whatever to do with ham radio.

It doesn't?!? You mean US amateur radio is just a pool of
trained 1930s era morse operators to fulfill a national need
for more 1930s era morse operators?!?

Amazing!

>
>You and Tom Hanks otta ask congress to award you the GI Bill.

Kellie ought to PAY the GI Bill.

Keep checking the CBS schedules for early Tuesday nights and
his story reprised on "JAG," names changed to protect the
real people.

I've heard rumors out of the Writer's Guild out here that it is a
"sure thing" to be nominated...in a new category of writing about
science fiction...

Who knows...this might be a precursor to a medal of freedom
award given by the President himself! Just think...ARRL news
will feature "Ham-hero awarded medal by Haynie on the
Newington White House lawn!"

> after that.

That depends on what rationale is considered. But at least we agree
that there was a reason for code testing until at least the 1970s.

> Once the need for any possible back-up to
> military or civilian morse operators dried up, the rational
> for any mandatory code testing evaporated. At that
> point, knowledge/skill assessment for morse as a mode
> equalled that of any other mode...i.e. no requirement.

I disagree! That argument presumes that the one-and-only reason for a
Morse test was/is having hams as a pool of Morse operators for defense
and industry. While that was clearly *a* reason for code testing, it
was not the one-and-only reason. If it were the one-and-only reason,
FCC would have enacted retesting rules (to insure the pool could be
counted on to actually exist) and would have exempted hams who
obviously never be needed in defense or industry (those above a
certain age, or with certain disabilities). But only the disability
exemption occurred, and only as a favor to a foreign King who is now
dead.

The simple fact is that while other radio services have all but
eliminated Morse use, the mode is alive and well and flourishing in
the ARS. In fact, there are probably more hams on the air with Morse
code today than in the 1970s!

Whether that use justifies a stand-alone pass-fail test is just a
matter of opinion, no more, no less. Same as always.

But it does seem odd that one reason often given for eliminating the
code test for a ham license is what non-hams do, rather than what hams
do.

If you weren't interested, why did you bring it up? It didn't relate to
amateur radio at the time you did so any more than it does now.

I'm not offended by Jim's comments and I'm a veteran. Unlike you, I actually did a tour in the country where a conflict was taking place. I don't see Jim. "spitting on the graves" of those who died in Korea. You weren't stationed in Korea anyway, Len. What is this rant about?

> Thank you for answering all of those questions, comrade.

Now THAT is an interesting comment. You manage to call into question the patriotism of someone who doesn't agree with you. You have no class.

Quite possibly.

> If you don't marry you don't have to divorce, just walk away.

Sure. But of those atheists/agnostics who DO decide to tie the knot,
the divorce rate is lower than even Roman Catholics.

Here's another fun fact: The US divorce rate in 1950 was higher than
in 1960. It appears to have peaked in the early 1980s, and is slowly
dropping.

That's true in a way. But the same thing can be said about almost any radio skill or knowledge. Like Ohm's Law or most of the regs. Of course those things are all lumped together in the written, and don't get their own stand-alone test like Morse does.

2001.
>

Maybe so. I'm sure we could have. But, Larry, it happened. And, just as
when other bad things happen in our lives, we must give them purpose and
find the positive in each and everything we encounter. Before Sept. 11,
this country of people weren't as sure as they are about their country, now,
were they? And, that's just one of many positive things we could find--if
we're prone to getting ourselves out of the crap and looking beyond the
horizon. You must not be.

>
> And I rather suspect that I can get at least 2,991 "ayes" to that right

>

I'm not as sure as you. I'd *like* to tell myself that we could have done without the likes of Hussein, Saudi Arabian leaders, Hitler, the Pharaoh, and countless other bad, terrible, awful people. But, if they were here and did what they did--then why? And, are we to live in the past and dwell upon it or are we to rise above the likes of them and find more to overcome their ways and thinking? When we dwindle away to their level, then who has won?

>

See above. Also, you might just want to broaden your horizon enough to consider this: if we don't have bad examples to learn from, then what *do* we learn?

>
> And, it just so happens, that YOU are one kind of radio
> amateur that the ARS can very well do without.
>

Oh, hell...the ARS could do without a whole, whole bunch of us. But, we all make it what it is. The interesting thing is that there are those who like me and those who don't. There are those who like you and those who don't. But we all make up amateur radio.

> here and there.

This has certainly been a project in the making for awhile. I did manage to get the thing up there on Sunday, and lo and behold, the high was 15 degrees here on Sunday, so I do believe I left some frozen flesh up there on the roof somewhere. :-) My coax-cutting, soldering and weatherproofing jobs seemed to have worked; I have perfect SWR on both the 2 meter and 70 cm bands. Beginner's luck maybe? One really important thing I learned during this process is, if you get high-quality coax, don't use a semi-sharp kitchen knife to try and cut it...

> I don't have either. Price difference alone may be enough to make the
> decision for you. If the '718 does what you want, go for it.

I probably will- I've had many positive recommendations from friends about that rig. And the price is certainly right.

> But perhaps there is a connection in that musicians are used to the
> *idea* of communicaion via modes other than talking and writing.

Speaking for myself, I kind of likened the code characters to a sound pattern and memorized them that way, which is similar to what I had to do to memorize an entire 20 minute show when I was in drum and bugle corps many years ago. I learned to hear patterns and commit them to memory when I read music. I also write poetry, and I can hear a "cadence" amongst and in certain words sometimes and that's when I know I've found the makings of a good poem. I find code to be very similar to this. At least that's how I made myself learn it.

> Only you can answer that one. But by the time you go for the code
> test, you may be ready for the written anyway. Remember, too, that a
> CSCE is only good for 365 days.

Yep. As soon as I pass the code exam, I'm buying the General manual. Being ADD makes me distractable, so it's best I do one thing at a time.

> Reason I mention it is that many folks, including myself, have wound
> up with higher-class licensessimply because somebody said "try this
> while you're here".

I have heard this too, but as a person who really wants to learn the material (and thus I read every single page and did every single exercise in the intro study guide, many of them more than once) I really want to know what I'm studying for. Personally I would feel as if I were cheating myself

out of some knowledge if I took the General without studying and passed it "by the skin of my teeth", but that's just me.

> What wall? (THUNK!!) DOH!!

I don't believe in walls. :-)

OK, we'll agree to disagree.

> That argument presumes that the one-and-only reason for a
> Morse test was/is having hams as a pool of Morse operators for defense
> and industry.

I suspect that the ONE argument pretty much sums up the mindset of the
FCC decision makers.

> While that was clearly *a* reason for code testing, it
> was not the one-and-only reason. If it were the one-and-only reason,
> FCC would have enacted retesting rules (to insure the pool could be
> counted on to actually exist) and would have exempted hams who
> obviously never be needed in defense or industry (those above a
> certain age, or with certain disabilities).

Logic failure...there is nothing to support your conclusion from
your premise. Indeed, to the contrary, the FCC has never embarked
on a retesting to obtain or improve on the purpose of amateur radio
in terms of amateur knowledge or skills.

> But only the disability
> exemption occurred, and only as a favor to a foreign King who is now
> dead.

The disability exemption would have happened at some point with or w/out
the King's intervention. The foriegn "help" simply brought it to the
forground quicker. There's no doubt in my mind that without
the foriegn intervention, one or more disabled hams would have
raised the legal arguments associated with the exclusionary impact
of the 13 and 20 wpm testing anyway (IMHO).

> The simple fact is that while other radio services have all but
> eliminated Morse use, the mode is alive and well and flourishing in
> the ARS. In fact, there are probably more hams on the air with Morse
> code today than in the 1970s!

Your point? USE does not constitute an absolute requirement
to learn the skill of sending/receiving. No more than hams
not knowing English or any other major foriegn language.

> Whether that use justifies a stand-alone pass-fail test is just a
> matter of opinion, no more, no less. Same as always.

It certainly hasn't held sway with the FCC...which is the only
entity that matters in my book.

> But it does seem odd that one reason often given for eliminating the
> code test for a ham license is what non-hams do, rather than what hams
> do.

It makes perfect sense when you look at the history of why
hams had to know morse code specifically rather than being
allowed to use any other codings (in the early days of ham
radio that is).

Cheers,
Bill K2UNK

Wow! Really? I am told it was filmed, partly at least, down here in Ft.
Worth. If you ever get to see it, I think it is at the end where "they" are
coming up from underground and the scene was filmed at the Ft. Worth Water
Gardens...at least according to what I am told.

Now, that's refreshing. I'll never forget when my youngest literally walked in the door one day and said, "So, Mom, what kind of car you buying me next year?" I laughed hysterically and asked him when he started taking hallucinogenics. He was very put out when he learned that not only would I not be buying him a car, he was also going to have to pay for his own insurance and he would *never*, quote never, drive any of my vehicles! I was very proud of him when he went out and got a job a few weeks later, began saving his money, bought his Volkswagen Beetle the next Summer and covered his own insurance!

I shouldn't have been so general about that. I usually try to keep myself in check. It seems that many women I have met down here are very dependent and minful of their husbands. Lots of us have debated it and the attributable things we can come up with is that it is the Southern Man/Southern Woman way of life, country v. city (I come from the country where ya'd better damn well be able to fend fer yerself), or even that this is the Bible Belt (something about women obeying their husbands). You literally would not believe how many women about fall over when I pull the checkbook out of my purse. They think I stole it and am going to have to say 1000s of Hail Marys when I get back home. Sheesh...

Hey, since yer thinkin' like me. Run out and get the game Cranium. I absolutely guarantee a blast of it, or I'll send you the money it cost ya. It really is a hoot...only if you're going to have a get together of--oh--20 or more people though! It is the most fun game I've ever owned. It also goes a long, long way to pulling in a whole roomful of people to common ground, even if there are those who just want to spectate (dare 'em...they can't do it).

If it is so obvious, why has it been abondoned by all other
services and why is it NOT supported, encouraged, or used
(except in very rare occasions) as part of emergency preparations
and in actual emergency comms?

A point I and others have oft made. Indeed, I'd have (as I've said before)
no problem with knowledge of morse being incorporated into the
overall test pool on a non-exclusive test basis.

I lived with a man for 14 years and we are still very, very good friends.
In fact he and my husband are very good friends. It was very hard for both
of us to walk away. And, for many who are serious about a relationship (not
```

those who hop from bed to bed), a "live-in" relationship is every bit as serious to them as if they'd been married.

Another thing to consider for atheists and agnostics is that, maybe, a disbelief or uncertainty in something bigger than ourselves makes us far more reliant upon the world and those around us. Doesn't it speak to this very thing in the Bible? Something about worldly things?

That's right, it does. And there are some encounters we'd be better off
without.

Your original statement was:

"I can't think of a pleasant world without all kinds in it."

Would the world not be pleasant without the Saddam Hussein kind and the OBL
kind? What would be lost if the terrorists and oppressors and those bent on
destruction simply disappeared?

Ever see the Kurosawa classic, "The Seven Samurai"? Told a basic truth: The
productive people (farmers) don't need the destroyers of production (bandits)
to exist and have happy lives. But the bandits sure need the farmers to exist!

If you want to talk philosophy, tell us what the producers of the world gain
from the moochers and destroyers.

Actually, whether it's a "right" or not is unclear. FCC issued the call,
probably because they did not want the hassle of denying it.
>
>The thing is if you or I or anyone else doesn't "approve" of her call,
>we don't have to call for her on the radio and talk now do we? We

Exactly.

>I am a B.A.C. and a church elder locally and I'm not comfortable
>with her callsign either but it's her's and I'm not the one who is
>going to "judge" whether or not she should have had it or not, HE is!

But you ARE judging, by saying you're not comfortable with it.

Suppose you were on the air and someone with a vanity callsign you are not
comfortable with calls you. If you don't answer, based on the callsign, that's
a judgement. If you DO answer, that's a judgement, too.

Or suppose somebody petitions FCC to issue 1x4 calls to hams, so there could be
calls like W5KIDD or W1BILL - or W5(expletive deleted). Would you oppose or
support such a petition? Oppose support, or do nothing, they're all judgements.

Yawn!!! Kim, as far as I'm concerned, you don't have any "peers" in the
ARS -- only superiors. That's because, you see, you are at the bottom of
the pile! You've placed yourself there by selecting a demeaning and sexually
suggestive call sign for your own personal amusement, without regard to
the negative impact it has on the image of amateur radio operators as a
whole, and YL hams in particular.

Also, a marriage with a person you met in 1 day, known for one week, married one year later, with the original 1 day "encounter" set up by others, is just as valid.

Would have been Extra sooner: if that dumb Morse Code requirement was lifted.

>Gardens...at least according to what I am told.

IMDB should know, under the "trivia" option.

The 1981 movie "Taps" was filmed in my town. Mostly at Valley Forge Military
Academy, north of here about 2-3 miles. General Schwartzkopf is an alumni.

>
>Now, that's refreshing.

Rule of thumb around here. One reason people choose to live in places where the kids can walk or ride bikes to most things. Of course such a community requires sidewalks, traffic lights, and relatively high density of housing for such a system to work. And you still wind up doing some chauffering, but with enough population density the parents trade carpool duties.

End result is the kid doesn't HAVE to drive or be driven after a certain age, but wants to drive in the absolute worst way. And will do whatever the parents want to get the license, insurance, etc.

>I'll never forget when my youngest literally walked
>in the door one day and said, "So, Mom, what kind of car you buying me next
>year?" I laughed hysterically and asked him when he started taking
>hallucinogenics. He was very put out when he learned that not only would I
>not be buying him a car, he was also going to have to pay for his own
>insurance and he would *never*, quote never, drive any of my vehicles!

Standard practice around here is that the kids drive the family car(s) IF they meet all the qualifications. Like good grades, paying for gas/insurance, driver ed, chores, etc. Sure, some kids get a car as gift and get the free ride on costs, but even those kids often discover it's not a free ride because they are required to do all sorts of things now that they have wheels. ("Here's the shopping list for the supermarket, and the slips for the drycleaning that needs to be picked up. These packages are to be mailed parcel post. And drop off your sister at her friend's house on the way...."

They can't WAIT to leave!

>I was very proud of him when he went out and got a job a few weeks later,
>began saving his money, bought his Volkswagen Beetle the next Summer and
>covered his own insurance!

'round here, most of us grew up knowing that even asking such a question was dumb.

I'm just saying the stats show we were both way off base. Massachusetts, for
example, has one of the very lowest divorce rates in the whole USA. New York,
too, though not as low as Mass. Lots of other examples. But Mississippi?
Wyoming? Near the top of the scale.

Maybe. Or maybe it's the dry Yankee humor. Plus we don't have to endure a
constant barrage of country-and-western music.

What's probably going on is that the social trends that hit the Northeast and
West in the '60s and '70s are finally reaching the South., with predictable
results.

>miles.
>> >(Source: "Esso War Map III, Featuring The Pacific Theater", printed 1944).
>>
>> That's nice...a demonstrated capacity for reading books
>> about an era before your birth?
>
>More like a simple correction to the inaccurate information posted by
>you.

"Inaccurate information?!?" That from an individual who has
not shown his alleged State Department procedure references
of using on-off keying as the "order wire" of an RTTY circuit
in the 1980s?!?

Why a 1944 Esso map? Why not a current aeronautical chart?

What is wrong with an APPROXIMATE distance? Did Heil
read any adjectives that preceded this alled "inaccurate"
distance? Why is that so important? [everyone can guess
that...the exactness is irrelevant...it is the "correction" of
someone with an opposite opinion that is "all important"]

>> What is the distance from Vladivostok to Pennsylvania, any
>> part during the Cold War?
>
>Whazzit matter? He wasn't the guy painting the picture of himself in
>harm's way.

Who was "painting a picture of being in harm's way?"

I was operating HF transmitting facilities in the Far East Command
as part of US Army forces in central Honshu 1953-1956. I've never
said otherwise.

YOU were the one alleging "hero tales" and "in harm's way."

Why is Heil having an argument wtih himself?

>> Were you at either end wearing a
>> uniform, issued dog tags and a sidearm at that time?
>
>Isn't your question a little silly? That's sort of like me asking you

>why you didn't serve your country during WWII.

Why is it "silly?" He used a 1944 map reference to attempt
a diversion of the subject sub-thread...as if he "knew more"
about the subject of military service without ever serving in
the military...and also to "correct" someone on an irrelevant
point just for the sake of diversion.

Oberst Heil is the one stomping his boots about "being IN"
something or shutting up. He should make up his mind,
be consistent in the constant critique.

>If you weren't interested, why did you bring it up? It didn't relate to
>amateur radio at the time you did so any more than it does now.

No one is held answerable to Heil about anything. He has no
authority for that.

So, Herr Oberst, tell us how the following subjects "relate" to
amateur radio...subjects in other message threads in this
newsgroup currently: Religion...Religious Morals...Matrimonial
Relations and Divorce...Popular Songs...Fiction Novels...

If Heil wishes to Control newsgroup content and - especially -
who is "permitted" to post, then he should also correct those
who do not come close to the subject of amateur radio policy.
Heil does not do that. Heil wants to stifle and subdue those
who do not agree with him. That's evident by inspection.

>I'm not offended by Jim's comments and I'm a veteran.

Yes, everyone is aware of your "being in the USAF" and
"working with NASA." Ho hum. When did Heil receive his
Hero Medal from being in Harm's Way while "serving in a
country involved in conflict?"

>Now THAT is an interesting comment. You manage to call into question
>the patriotism of someone who doesn't agree with you. You have no
>class.

Heil has called into question my patriotism, attitude, and other
things because I do not agree with him or his implied "authority"
derived from his amateur class.

Heil allows little latitude in anything in regards to persons with
opposite opinions...yet he allows astronomical inaccuracies on
others who agree with his opinions. No Esso maps needed
for that kind of gas...

I can't answer that, because I don't know. I don't know that I'm right
about the world needing all kinds, and I don't know that I'm right that we
need all encounters to be what we are. That is what I believe. It is
called faith. I do know there isn't a time in history in which "we"
(people; humans) have not had to endure bitter times. I have to believe

there is a reason, or a purpose, for that--or continue to ask the question why.

> Ever see the Kurosawa classic, "The Seven Samurai"? Told a basic truth: The

> to exist and have happy lives. But the bandits sure need the farmers to exist!

There is an (Eastern?) philosophical statement that says for every action there is an equal and opposite reaction. It's probably much like Christianity's "to everything there is a turn..."

I have not seen the movie "The Seven Samurai"; however I would have to challenge the tenet as being unprovable. We've never had a world without challenge.

> If you want to talk philosophy, tell us what the producers of the world gain
> from the moochers and destroyers.
>
> 73 de Jim, N2EY

We, at the least, gain knowing that we don't want to be like them, think like them, act like them. They, at the least, offer an example of what can happen if we do.

You could be right, Jim. However, the government is "knowing" enough to know that I in no way have the resources or desire to take them on over something as silly as this.

I am also not married to this callsign. I've always thought it will be very interesting to see what happens upon renewal time. Think it will be denied?

Talk about trivia: since I've had this callsign, I have probably been on the air no longer than--oh--maybe 5 hours. How many years? I couldn't even tell you. A) Does that sound like my callsign is going to bring the ARS "one step closer to extinction?" B) look at QRZ. The lookups on my call rival some of the biggest DXers. I'm not bragging...it's just a fact. Know where I've used my callsign most?

Uh huh...right here. Which medium, gentlemen, has the greater influence?

> >
> >The thing is if you or I or anyone else doesn't "approve" of her call,

> But you ARE judging, by saying you're not comfortable with it.
>

I don't think that's the kind of "judging" we are talking about here, Jim. To be uncomfortable with something, even to vehemently disagree with it, is not judging. Judging is when someone tells another they are going to Hell, or bringing the ARS "one step closer to extinction." That is judging--something which I doubt many of us are good at.

It's kind of like when I disagree with Larry. I think there have been times I have been judgemental, and I know I've been juddgemental of Dick. However, most of the time I plainly make it clear that I strictly disagree with their interpretation of something, but always try to allow them the dignity to think the way they do. Everyone gets under each other's skin, so we judge. It's not good, but we do.

> Suppose you were on the air and someone with a vanity callsign you are not
> comfortable with calls you. If you don't answer, based on the callsign, that's
> a judgement. If you DO answer, that's a judgement, too.

I disagree. I think a judgement would be more if the person answered back and said something like, "you are going to bring the ARS one step closer to extinction." To ignore the person, based on their callsign, is an acknowledgement--a partnership really, if you will--that the other disagrees with the callsign, but chooses not to "act like an idiot" (to judge -- ;)) about it.

> Or suppose somebody petitions FCC to issue 1x4 calls to hams, so there could be

>
> 73 de Jim, N2EY

Those are values. Personal values. Judgements are when we turn our values against other people (incidentally, acting at the level the judger is professing against).

Which defaults to the statement that it is considered OK, legal, a
right or whatever one wants to label it as from a legal perspective.

> >The thing is if you or I or anyone else doesn't "approve" of her call,
> >we don't have to call for her on the radio and talk now do we? We

> But you ARE judging, by saying you're not comfortable with it.

His (KB9TMP) "judgement" is strictly his opinion and holds no sway with
anyone or any legal status...or ethical or moral.

> Suppose you were on the air and someone with a vanity callsign you are not
> comfortable with calls you. If you don't answer, based on the callsign,
that's
> a judgement. If you DO answer, that's a judgement, too.

But the judgement is limited to the individual. Now if he were advocating
that everyone else should do the same, then he is attempting to sway
others to his opinion.

> Or suppose somebody petitions FCC to issue 1x4 calls to hams, so there
could be
> calls like W5KIDD or W1BILL - or W5(expletive deleted). Would you oppose

or
> support such a petition? Oppose support, or do nothing, they're all
judgements.

Opposing or supporting constitutes an effort to influnece
per your judgement. Doing nothing signifies nothing as
to ones position and may simply indicate a desire to NOT
extend personal judgement on the possible outcome.

End of my foray into this thread.

Cheers,
Bill K2UNK

> more reliant upon the world and those around us. <snip>

Interesting observation. I am not sure whether I am more reliant on the world as a result of being agnostic.

I have just chosen to neither believe nor disbelieve in the reality of a Supreme Being until we can all know for sure what the real point is, if any, of our tenure on this particular planet, in this particular galaxy, in this particular region of the known universe.

Here is how I define "agnostic": I don't feel that I have any reliable, foolproof way of really knowing if there is a Supreme Being or not- and even if there is one, I don't feel that I possess any way of being sure that I could know that being's nature, given my own limited human faculties.

I think that any person, or any group, that claims to have "God on their side" is downright dangerous, because that potentially gives them a personal license to get away with practically anything. So many adherents of various religions have done just that and have gotten away with horrible crimes against their fellow humans, all while "justifying" such actions by saying that their prophets, their gods or their holy writings prescribed such actions. All of which, of course, was subject to their personal or collective interpretations of those writings and prophets.

I need *no* other reason to shun organized religion.

I essentially believe that all of organized religion is humankind's collective way of trying to understand and make sense of what they do not know, and prepare for what they fear the most- which is the unknown, after we die. I wouldn't want to spend an afterlife with a bunch of people who thought that they were justified in belittling the lives of their fellow humans in *this* life.

"Holy books" tend to stress stories and actions which reflect that particular religion's cultural values, morals and societal ethics. To me, it seems ridiculous to try and use any "holy book" to rationalize war, oppression, slavery, and racism, yet many people find certain passages in their "holy books" to try to do just that.

There are enough passages in many "holy books" to justify shunning them as something to model one's life after (unless you happen to be the "cafeteria" type when it comes to adherance of a chosen religion's tenets- picking what

you like about it, and rejecting what you find disagreeable).Yet, if you really read them, most "holy books" tend to reflect nothing more than the same tired old story of humanity, don't they? Sure, there are stories of compassion and love for one's fellow humans, but they are to be found interspersed amongst annals of war, strife, getting ahead of others, persecuting those who believe differently than you do, the hoped-for and eventual triumph of certain people or religions over others, etc. All while trying to somehow fit in the concept of some Supreme Being who will eventually justify it all.

Who knows the truth for sure? I certainly don't. I have come to the conclusion that people choose to do good in spite of religion, not because of it.

I don't know if there is a life after this corporeal one. I don't think I *can* know. That's the essence of being an agnostic. It's not that I *don't* believe in a Supreme Being- but, if there is one, then I very much doubt that he/she/it would fit entirely under the auspices and creeds of one singular religion. Personally, if I were the Supreme Being, and I had created the universe and everything and everyone in it, I'd be mightily pissed off at what some people did in my name and then claimed that I ordered it.

Anyway, since I'm not sure whether or not there is an afterlife, I try to treat others the way I'd want to be treated, for as Jesus said, this "sums up the law and the prophets"-- Matt. 7:12. It just makes sense; that's why so many religions have this "Golden Rule" at their very base (or at least claim to). Living by this principle makes life more pleasant for EVERYONE involved on this planet, irrespective of culture, creed or socioeconomic status. This same principle is also expounded upon in the Buddhist principle of "karma". Do good in your present life and you get rewarded in your next incarnation. It's also to be found in Judaism: "What is hateful to you, do not to your fellow men. That is the entire Law; all the rest is commentary" (the Talmud); "No one of you is a believer until he desires for his brother that which he desires for himself."- a hadith (saying) of Muhammad.

Now, of course, many people who claim to follow a certain religion don't always act in the ways their prophets or their version of "God" told them to, so that makes me think that either these groups don't have a direct line to the Almighty, or maybe the concept of "religion" as a way to understand the unknowable itself is flawed. Either way, to me it means that religion cannot lead us to the Great Answer of who, or what, is "up there"-- or help us to know if there *is* anyone "up there".

I like good old Abe Lincoln's personal definition of religion: "When I do good, I feel good; when I do bad, I feel bad. That's my religion." That's mine too.

I know this doesn't have anything whatsoever to do with amateur radio... however, since the topic was brought up... :-) Sorry. That's all I'll say on this subject.

73,

Jackie

Your words, Len...
"If Heil wishes to Control newsgroup content and - especially -
who is "permitted" to post, then he should also correct those
who do not come close to the subject of amateur radio policy.
Heil does not do that. Heil wants to stifle and subdue those
who do not agree with him. That's evident by inspection."

Evidently you wish to fill a gap here....namely questioning posts that
you disapprove of. And, if I may be so bold, what gives YOU the right, oh
self-appointed one? If you so dislike what you percieve as Heil's spin on
who should or should
not post, why, then, are you doing the very same thing that you so eschew in
Mr. Heil?

You aren't speaking for this YL ham Larry. If the FCC allowed this call, then who am I to judge? If I don't like a callsign that a particular person chose, then I don't ever have to strike up a conversation-- Usenet, amateur radio or otherwise-- with them. I'm not defending Kim's choice of callsign or demeaning it. It isn't mine and I don't think it'll have much, if any, impact on amateur radio, no matter what I think of it. If there's a real issue here, then let the FCC deny her a renewal of this callsign when the time comes, for the FCC is the overseer of the appropriateness of such things.

Not at all, Jim, not at all. The irony of all this is that these are women who live in or near the Big D. One would think that city women would be far more independent...wouldn't they? No joke...the first time all the brothers-in-law (3 of 'em) and my father-in-law and my husband were going to go hunting I came up with the idea for all us women to have our big garage sale we'd been talking about.

Now, mind ya...this is a) a Yankee from the north at the table, b) a woman to beat, and c) the only son's wife. She (me) is standing at the kitchen table, men all attired for their great hunt (yeah...*cough* throw some deer corn in the feeder a few weeks before season open and sit in your chair the day it opens to take your deer---I digress) and I mention the garage sale with my mother-in-law's shocked face slightly nuding in the "negative" direction as my shocked--uh, patriarchal--father-in-law states, "like hell you will." I look at him and say, "like hell we won't and why not?" Suffice it to say that moment was a bit more liberating for my mother-in-law than my father-in-law would have intended.

>
> But the stats do support such a theory.....The women finally get sick of
it and
> split?
>

Ya know what, Jim? Sadly, I really think what happens is most of the men end up in extra-marital affairs (usually for a fresh, squishy woman) and leaves for her (the other woman).

You'll giggle at this. My fine, Southern gentleman that I married; when we first were going together--about a few weeks after we'd begun dating--he put his finger up at me one night and said I would not be going to any bars with my girlfriends. I stopped dead in my tracks, nicely turned around and walked back toward him and, very nicely and politely told him that I'd been in bars before without him, handled creeps without him, and live through it without him--and if he intended for us to go any further, he'd start training himself not to have that kind of insecurity. Took 'im about two years but he finally realized and knows that I love only him, admire him and adore him and there isn't a soul or other man who'd pull me away.

Women can take care of themselves. Mind you, I am far from a women's libber. In fact, I can't stand 'em. BUT, I can stand up for myself. And, I can change my own tires.

Hey, Trivial Pursuit is kewl...I thought it was great, too, until I played
Cranium. Cranium is harder to get to play because it does take a large
group of people. But, HEY, guess what? I took it to a party of one of my
rich and influential friends last Christmas. The snuffy teens *AND* the
stuffy adults were all DOWN ON THE FLOOR, sleeves rolled up, and having a
blast. They said they hadn't that much fun in years.

We're leading up to how poor excuses for conversationalists often find
themselves in a divorce situation.

>

Hmmmmm, let me define reliant as I intended to relay. I think an agnostic
(or atheist) would *have* to be sensitive to something, right? And, as
humans we have our "egos" (call it whatever you will, our needs, our desires
for acceptance, recognition of success, etc.). If someone has what they
believe to be a strong relationship with God--their desires for the most
part are fulfilled. They seek nothing in general from people in general
because they have, from God all the love and attention and approval they
seek.

However, someone without that relationship would either have to be very,
very self-centered (and I don't say that derogatorily--I mean it as a
self-reliant sort of comment) or would have to achieve their desires through
acceptance from animals or humans. Hermits are often very successful with
animals at least trusting them, because they (the person) gain a sense of
accomplishment in having something trust them. And so forth.

I used to be agnostic. But, I had a very profound experience some years ago
and know there is something. I have still never sorted out exactly what
"it" is--but, for me, and I say this in the most respectable way, I *know*
without a doubt there is something.

Yes, in another thread, I've made a philosophical statement that kind of
takes off on that very thing. And, you're right, the zealousness flew.
Yet, one can read in any holy book the very same kind of thing. To
everything there is a season; for each action there is an equal and opposite
reaction, etc., etc. But it's not OK for me to speak from that perspective.

: need all encounters to be what we are. That is what I believe. It is
: called faith.

Faith is a non-rational belief in some proposition, without evidence to support it, and in fact a belief which is contrary to the sum of evidence for that belief. A belief is contrary to the sum of evidence for a belief if there is overwhelming evidence against the belief, e.g., that the earth is flat, hollow or is the center of the universe, or that the world needs all kinds, when "all kinds" includes O B Laden, Hitler, Saddam Hussein, and Rasputin.

As an agnostic, I don't have 'faith' that "the world needs all kinds" because such a statement is irrational on it's face. If your god sends you such pestilences to test your 'faith', then I submit that you need to shop around for a new god (lower case "g") whose testing methods are less destructive.

Yeah, inaccurate information.

> That from an individual who has
> not shown his alleged State Department procedure references

> in the 1980s?!?

My "procedure references". Check with someone in the Bureau of
Information Managment at State if your curiousity is getting the best of
you.

> Why a 1944 Esso map? Why not a current aeronautical chart?

Why not a 1944 Esso map? Did Japan drift much between '44 and the early
fifties?

Your whole rant was irrelevant. Your wrapping yourself in the flag and
equating yourself with those killed in action is irrelevant and more
than a little sleazy.

> >> What is the distance from Vladivostok to Pennsylvania, any
> >> part during the Cold War?
> >

Why, you were, Leonard. There you were, only an hour from obliteration.

> I was operating HF transmitting facilities in the Far East Command
> as part of US Army forces in central Honshu 1953-1956. I've never
> said otherwise.

What was all the talk of Bear bombers being just an hour away. What was all the talk of others insulting the memory of thosed killed in action. After all, you were nowhere near any action.

> YOU were the one alleging "hero tales" and "in harm's way."

I was? When was that, Len?

It is silly because you know the age of N2EY. It is silly because your latest rant is more proof of the falsity of your claim to only want to civilly discuss the removal of morse code testing. It is even sillier of you to call his comments a diversion.

> Oberst Heil is the one stomping his boots about "being IN"

> authority for that.

Back at ya, Windy. No one is accountable to you over your questions about their military service or lack of it. You have no authority for that. Again, your blather about being within an hour time of a Soviet Bear is irrelevant.

I note that you chose not to answer the question though.

> So, Herr Oberst, tell us how the following subjects "relate" to
> amateur radio...subjects in other message threads in this

> Relations and Divorce...Popular Songs...Fiction Novels...

They're just as irrelevant as your posts but those posting them haven't posted several times that they are "only interested..." as you have.

> Hero Medal from being in Harm's Way while "serving in a
> country involved in conflict?"

Ho hum indeed. I've not claimed to be a hero, Leonard. I was at least in the country where the conflict was taking place, drawing my combat pay and operating radios--for the most part, safely in the rear area. To your tales of danger from Soviet bombers while working in Tokyo during the end of the Korean War, I say ho hum.

> >Now THAT is an interesting comment. You manage to call into question

I've never called your patriotism into question, Len. I think you come off like Good Old Mister Wilson quite often. At other times you provide us with your Foghorn Leghorn imitation. Your comments do not address the fact that you just questioned the patriotism of another with your "comrade" comment.

> Heil allows little latitude in anything in regards to persons with

> others who agree with his opinions. No Esso maps needed
> for that kind of gas...

Gee, "Anderson" allows little latitude to those who don't share his opinion and "Anderson" has often engaged personal insult and denigration

while claiming that he only wants civil debate. "Anderson" is great big fibber.

> How is this related to amateur radio policy?

Some recent examples of Leonard H. Anderson's civil debate on the
removal of morse code testing in amateur radio licensing are:
Including that Elecraft K2 designed by yourself?

"Kellie won the Cold War single-handed. Just ask him..."

"Nice attempt at literary colloquialisms in philly cheese-steak
patois, but don't give up your day job at the bearing factory."

"Let us know what week your story appears on JAG..."

"Of COURSE there is! It's obvious! A devout, almost Puritan
Belief in the Credo through the encyclicals and edicts handed
down from the Temple of St. Hiram since Time Began! :-)"

"There is no need to feed Red-Faced Beeping Puffins.
They live on hot air, frequently belching noxious
stomach gas while twittering nonsense. It is amusing
to watch them flap and jump on thin branches just
before the branch breaks sending them to the ground."

"The USN wouldn't take you in on a bet, Kellie. Had you served
in ANY branch of the US military you would have found out that
ANYONE has to be part of the work needed NOW. There are
few "lines" drawn on who does what in emergencies, NO "unions"
to "negotiate" tasks or pay."

How are any of these related to amateur radio, Len?

So much for Leonard's claim that he sticks to "the subject" and only
engages in civil debate. You're a humbug, Len.

Statistically, the older the driver the person is the most dangerous they are on the roadway and I can speak from experience. I have worked a variety of accident scenes where these "old farts" who almost hit us or others at the accident scenes scares the crap out of me. Not to mention the 30+ traffic cones directing the flow of traffic around the scene, as well as the apparatus emergency lighting, they still claimed they didn't see anything. Gee... I guess they were thinking it was Christmas or something....

Gee, I guess I might be more towards the agnostic but not the athiest extreme. (non-denominational basically) I view the bond of marriage one of the most important contracts a person would have in life. Therefore I believe that is one of the wisest choices to be made, and not made lightly. It should be done for the right reasons, and not because someone or some group declares that a person must get married. Get married when you are truly ready and with the right person is my opinion.

Having a for real Bear that close up gave me a good dose of heebie-jeebies but in the end it really wasn't much more than an air show. As I found out Soviet overflights of our ships were not particularly unusual including occasional low altitude runs by Bears over carriers and missle frigates. They were supposedly photo-recon missions but that was a flimsy misnomer for intentional aggravation missions. Everybody up top knew well ahead of time that the Bear was on it's way and what it was gonna do. 'Cept me, I was at the front of my learning curve, all I was told was to get set for for some interesting photos. Which I did. I looked around the deck just after his pass and there were guys with cameras everywhere, seamen to scrambled-eggs types. "Photo recon" . . yeah, right, all he got was shots of maybe a hundred of us getting shots of him. Had to be an intelligence goldmine.

It was an inexcusable, childish, stupid and dangerous Soviet game is what it was.

> know that I in no way have the resources or desire to take them on over
> something as silly as this.

I don't think FCC knows that at all. Not without expending resources
to find out, and resources are chronically short at FCC.

All FCC really knew back when you applied for that vanity call was
that you had the license, had filled out the paperwork, sent in the
fee, and had no enforcement actions pending or in effect. And you'd
specifically asked for that callsign. It was available in large part
because FCC won't issue calls like that in sequence.

So the FCC clerk who opens the application can do two things: Either
make a fuss or just process the application. If a fuss is made, you
could turn out to have all sorts of resources willing to make the fuss
bigger. Cries of discrimination, censorship, etc.

Worse, there's a precedent. The W6 version of your vanity call has
been assigned since at least 1979 (I used to have a 1979 Callbook, and
looked it up). QRZ.com sez the same person still has it. First name
Michael, btw, which could be either gender. You'd have quite a case if
they denied your app after the W6 version had been around for at least
15 years.
>
> I am also not married to this callsign. I've always thought it will be very

>
> I don't think that's the kind of "judging" we are talking about here, Jim.
> To be uncomfortable with something, even to vehemently disagree with it, is
> not judging.

Then let's use a different word, rather than getting bogged down in
semantics.

> Judging is when someone tells another they are going to Hell,
> or bringing the ARS "one step closer to extinction." That is
> judging--something which I doubt many of us are good at.

A lot of judging comes down to opinions and nothing more. That doesn't
mean all opinions are equally valid.

> It's kind of like when I disagree with Larry. I think there have been times
> I have been judgemental, and I know I've been juddgemental of Dick.
> However, most of the time I plainly make it clear that I strictly disagree
> with their interpretation of something, but always try to allow them the
> dignity to think the way they do. Everyone gets under each other's skin, so
> we judge. It's not good, but we do.

Then let's use a different term. How about "express a value". Or maybe
"approval/disapproval". If 'TMP won't talk to another ham because of a
vanity callsign, that's expressing a value that he thinks the callsign

is inappropriate.

> > Suppose you were on the air and someone with a vanity callsign you are not
> > comfortable with calls you. If you don't answer, based on the callsign,
> that's
> > a judgement. If you DO answer, that's a judgement, too.

> I disagree. I think a judgement would be more if the person answered back
> and said something like, "you are going to bring the ARS one step closer to
> extinction." To ignore the person, based on their callsign, is an
> acknowledgement--a partnership really, if you will--that the other disagrees
> with the callsign, but chooses not to "act like an idiot" (to judge -- ;))
> about it.

One is passive, the other is active, but both are an expression of
disapproval.

And if what you want from that callsign is attention, getting no
answers to your calls on the radio could be very effective.
> >
> > Or suppose somebody petitions FCC to issue 1x4 calls to hams, so there

> Those are values. Personal values.

OK, then - express a value. Support, oppose, or ignore, they're all
expressions of personal values. Or maybe we should say "choices".

> Judgements are when we turn our values
> against other people (incidentally, acting at the level the judger is
> professing against).

How is that a bad thing? How is it acting at the level the judger is
professing against to say that something is bad - or good - for the
ARS?

Keeping silent about something that we think is not in the best
interest of a community - any community - is essentially "approval by
inaction". Not a good thing.

Personal attacks are a different sort of thing entirely. There's a
world of difference between "That sort of callsign is a bad thing for
the ARS" and "A person who would hold such a callsign is a bad
person".

Nothing to do with Kim's statements, but I couldn't pass this up:

"K HB" <k hb@arrl.DOTORG> wrote:
>
> Faith is a non-rational belief in some proposition, without evidence to
> support it, and in fact a belief which is contrary to the sum of evidence
> for that belief...

That is a standard charicature used for straw-man arguments against belief in scripture. It has become the "standard" definition, so much so that bible-believers can't escape being tarred with that brush. But it is not the biblical definition of faith, nor the Christian definition.

Scripturally, faith is belief based on evidence, but not based on proof. It is the quality which allows us to treat the best available conclusion as certainty, without waiting forever for the last bit of "smoking gun" evidence. (And here I recognize that the "best conclusion" is a subjective notion--but that's fine: faith is a personal quality.)

> As an agnostic...

ARE you agnostic? An agnostic is someone who says, "I don't know." Many today who call themselves agnostics actually believe that "definite answers to this question CANNOT be known." But the assertion that one can never know, on the basis of any evidence that has been or ever will be assembled, is in fact a non-rational one. You believe that premise (if you do) purely on faith.

One can't help noticing that Brian's posts are becoming more and more disjointed as he presses on in his quest. One wonders if the actuarial tables aren't about to catch up with him.

One more utterly pointless "WGSP" trivia (WGSP = Who Gives a s--t
Putz?).

> I was a visiting staff engineer for RCA Corporation at the
> Naval Air Development Center, Warminster, PA, intermittently
> from 1972 through 1973. NADC was the contracting agency
> for a DoD sponsored R&D program designed and developed
> by RCA Corporation.

Yo Putz: I've done the whole nine yards in the DoD contracting game.
From the inside as the contract originating engineer with the sign-off
responsibilities to being the corporate officer with two firms who
sold & signed dunno how many DoD contracts for everything from paper
R&D studies to pipe fittings. Two points here WRT to your "visiting
staff engineer" manure: There is no such thing as a "visiting staff
engineer" in the gummint dictionary, it's right outta yer imagination.
You are not an engineer and RCA was not dumb enough to ship a bench
tech to Johnsville and try to pass you off as an engineer.

> At no time did NADC, the USN, or the
> Department of Defense ever compensate me personally for
> that work. My salary and expenses were paid entirely by the
> RCA Corporation.

Of course Putz, what's the discussion here? You were just another RCA
rental unit. Johnsville cut a contract with RCA, one of the line items
in the contract called for RCA to supply some amount of tech labor so
RCA shipped you off to NADC to fulfill that obligation. RCA paid you
for yer labor hours and yer expenses. As was the case then and still
is the case with rental units. I've been one of those too Putz. Big
frigging deal.

>
> >What
> >"title" did Johnsville bestow on you on yer way in and not much later

>
> My employment at RCA Corporation was continuous from
> 1968 through 1975. 1972 through 1973 was in the middle
> of that time span.

Don't bother with the circle-jerk Putz. The question on the table remains unanswered, under what conditions did you find yourself no longer working at NADC? 'Fess up Putz, get it off yer chest . . we'll be nice to you. I promise.

> >Bullshit again Putz, you have any accredited baccalaureate degree in

Putz, you have an accredited baccalaureate degree in anything like I'm the King of England and that's the bottom line period. Yew are a WANNABE engineer and always will be PUTZ. Was it yer lousy SAT scores Putz? I noticed that the Army tossed you into a no-brainer MOS and kept you away from being able to screw the moose, they musta gotten the same drift.

Putz.

Religion 101...

One day a 6 year old girl was sitting in a classroom. The teacher was
going to explain evolution to the children.

The teacher asked a little boy: "Tommy do you see the tree outside?"

TOMMY: Yes.

TEACHER: Tommy, do you see the grass outside?

TOMMY: Yes.

TEACHER: Go outside and look up and see if you can see the sky.

TOMMY: Okay. (He returned a few minutes later) Yes, I saw the sky.

TEACHER: Did you see God?

TOMMY: No.

TEACHER: That's my point. We can't see God because he isn't there. He doesn't exist.

A little girl spoke up and wanted to ask the boy some questions. The teacher agreed and the little girl asked the boy: "Tommy, do you see the tree outside?"

TOMMY: Yes.

LITTLE GIRL: Tommy do you see the grass outside?

TOMMY: Yesssss (getting tired of the questions by this time).

LITTLE GIRL: Did you see the sky?

TOMMY: Yesssss

LITTLE GIRL: Tommy, do you see the teacher?

TOMMY: Yes

LITTLE GIRL: Do you see her brain?

TOMMY: No

LITTLE GIRL: Then according to what we were taught today in school, she must not have one!

>
>You aren't speaking for this YL ham Larry. If the FCC allowed this call,
>then who am I to judge?

Jackie:

Well, if you don't want to be the judge of Kim's call sign, allow me. As an
intelligent, educated, and mature person, I'm qualified to make judgments on
such things -- and I'm not afraid to do so.

>If I don't like a callsign that a particular person
>chose, then I don't ever have to strike up a conversation-- Usenet, amateur
>radio or otherwise-- with them. I'm not defending Kim's choice of callsign
>or demeaning it. It isn't mine and I don't think it'll have much, if any,
>impact on amateur radio, no matter what I think of it.

The impact on amateur radio lies not necessarily with one poorly-chosen
Vanity call sign, but the lack of intelligent consideration that went in to the
choice, and the permissive attitude of the federal agency which allowed it
to be issued. This call sign has an immediate effect on anyone who sees
it, and that effect, in what I hope are most cases, is to call the into
question
the judgment and character of the person to whom it belongs.

>If there's a real
>issue here, then let the FCC deny her a renewal of this callsign when the
>time comes, for the FCC is the overseer of the appropriateness of such
>things.

Things are changing in this country, and that could happen. However, I'd
prefer for Kim to see the error of her choice, and make the right decision to
change it on her own accord.

Ok how about it's her right as a licensed ham to "request" that callsign.
And the FCC has the decision about granting/denying that request.

> >
> >The thing is if you or I or anyone else doesn't "approve" of her call,

No I said I'm not comfortable with it. I would not want a call like that
(body part as an example) for myself. I would also not feel comfortable
using her call sign to call for her on the air.

>
> Suppose you were on the air and someone with a vanity callsign you are not

that's
> a judgement. If you DO answer, that's a judgement, too.

That's not the kind of judgement we're talking about here. We make
"decisions"
based on callsigns every time we use the radio. Who wouldn't jump at the
chance on Field Day to get W1AW? Or to shy away from a callsign that we
find distasteful.

>
> Or suppose somebody petitions FCC to issue 1x4 calls to hams, so there could be

> support such a petition? Oppose support, or do nothing, they're all judgements.

If we needed 1x4 callsigns I wouldn't oppose that, but I would hope that the FCC
wouldn't issue a "expletive deleted" callsign or anything like it. I agree with the
compairson between license plates and callsigns, if the state can deny a license
plate for certain reasons the FCC should do the same.

>
>
> 73 de Jim, N2EY
>

Just for the record I don't like Kim's callsign any more than Larry does. But
she choose it, it's her's for as long as she and the FCC wants her to have it,
and nothing we say here is going to change that fact. Telling her how bad
her callsign is for the ARS isn't going to change her mind about it, if anything
it might make her want to keep it longer just to keep the Larry's of this
NG all stirred up.

I used the above map because it shows the airline distance from Vladivostok to Tokyo directly. It was also right at hand, and more detailed than most commonly-available maps of the area. The distance to Chongjin had to be calculated from the scale. I have other maps of the area, and they all agree on the distances.

> > How does it feel to be at one end of an hour's flight time from
> > another country that had weapons of mass destruction?
>
> Ask any American born before the early '60s.

I'm not sure what you mean, Dave. Back in Cold War days, how long would it have taken for a Soviet ICBM to reach the eastern US? How about missiles from Soviet submarines? I think it's less than an hour. And there were no significant air defenses against such missiles.

Did you mean that only Americans older than a certain age (say, 40?) can remember when the nuclear threat was more than an hour away?

There are quite a few veterans of military service in this NG. Let's see...K4YZ, W4NTI, K0HB, K2UNK, N0IMD and of course K8MN, to name a few. Funny thing is, none of the above see my remarks as implying any sort of insult to any military forces.

> You're the one lashing out. Is your ego hurt?

It's fear, Dave. He's afraid of facts, afraid of new information, afraid of differing opinions and experiences. He's afraid of being proved wrong by someone he considers inferior - which means almost anyone, and certainly anyone who dares to disagree with him. He's terrified of li'l ol' me, and hams like me. This fear is expressed as anger, but it's fear that drives the anger, the false quotes, the name-calling and other games.

Been there, done that, got the scars to prove it. My callsign is a
reminder of winters in New York State, between Syracuse and Rochester.
Palmyra, to be exact.

(Trivia: What is Palmyra, NY, famous for?)

> My coax-cutting, soldering and weatherproofing jobs
> seemed to have worked; I have perfect SWR on both the 2 meter and 70 cm
> bands. Beginner's luck maybe?

Maybe. The real test is how well it gets out on-the-air. A dummy load
has perfect SWR ;-)

> One really important thing I learned during
> this process is, if you get high-quality coax, don't use a semi-sharp
> kitchen knife to try and cut it...

Or even low quality coax. I prefer single-edge razor blades. Others
swear by utility knives. Have also used professional-grade coax tools,
but they are expensive.

I gave up on soldering irons for outdoor antenna work years ago.
Propane torch with soldering-copper attachment does the trick.

There ya go. I'm told that musicians reach a point where they can just glance at sheet music and "hear" what the piece is supposed to sound like. Or hear a piece and know how to play it on a different instrument with no sheet music at all.

Morse is like that for me, and many others. Just like listening to somebody talk. Easier in some ways. But like music, skills such as those are not learned by reading a book or watching a video. Nor are they developed overnight.

> I also write poetry, and I can hear a "cadence" amongst and in

There's a joke in there someplace about "there once was a ham from Nantucket" but it's too obvious and too easy.

>I find code to be very similar to this. At least that's how I
> made myself learn it.

All different versions of the same idea. Whatever works for you. You may very well find you like using Morse on the air.

I applaud your desire to learn the material itself, and not just the surface info required to pass the test. Please don't hesistate to ask any questions if you run into problems. (Somehow I doubt you'll run into any problems).
>
> > What wall? (THUNK!!) DOH!!

Oh, I do! Remember Les Nessman, on WKRP, who put masking tape on the floor to indicate where the walls and door of his "office" should have been?

Famous line by Bailey (sigh) Quarters:

"Les can't hear you - his door is closed"

Shortly before his death, he was asked by an Illinois minister,
"Do you love Jesus?" Lincoln replied, "When I left Springfield
I asked the people to pray for me. I was not a Christian. When
I buried my son-the severest trial of my life-I was not a
Christian. But when I went to Gettysburg and saw the graves
of thousands of our soldiers, I then and there consecrated myself
to Christ. Yes, I do love Jesus."
(America's Providential History, p.241).

We should note one of Lincoln's warnings:
"The philosophy of the school room, in one generation,
will be the philosophy of government in the next."

I'd hate to do to amateur radio what we did to the
schools of America back on June 25, 1962!

The 8th International CCF Contest/DX Meeting in Finland

Contest Club Finland welcomes contesters and DXers to the 8th international
Contest/DX Meeting in Finland!

Date: 17-19 January 2003
QTH: Vantaa, Finland

Presentations with perspective - Agenda (preliminary):

Friday 17.01.2003
19:00 (local time) "Unofficial" Get-Together in Sokos Hotel Vantaa

Saturday 18.01.2003 Sokos Hotel Vantaa
Meeting 12:00 - 19:00:

CQWW DX 2002 CW at EA8ZS &#65533; la OH2U by OH2XX
(Claimed multi/multi winner)
- The story behind
- Setup and technical solutions
- Audio examples

Serious RTTY Contesting by OH2BP

WRTC2002 Analysis by K3NA

ZA1B CQ WW CW Operation by OH5BM

Logistics Behind A Contest/DX Pedition To a Remote Location, Case
C53M/C56R
by OH9MM

Contest Dinner 19:00 -
(please inform when you pre-registrate, if you are taking part in dinner
too
... menu/prices available soon)
WRTC2002 Video Presentation - World Premier by OH2BH

Sunday 19.01.2002
Goodbye Finland (program still open)

Meeting QTH information:
SOKOS HOTEL VANTAA, Hertaksentie 2, 01300 Vantaa
(5km from Helsinki-Vantaa Airport, 15 minutes to Helsinki City Centre
by
train)
Rooms: single 77 euros/night, double 88 euros/night

Reservation: phone +358-20-1234 600 (020 1234 600 from Finland), fax
+358-20-1234 646 (020 1234 600 from Finland), email:
sokos.hotels@sok.fi
Web site: http://www.sokoshotels.fi (choose Vantaa)
MAKE YOUR RESERVATION AS SOON AS POSSIBLE !

Other accommodation in Helsinki area:
A great deal of other accommodation is available in Helsinki for a
variety
of categories and rates.
Here is a good contact point for general accommodation:
http://www.hel.fi/tourism/html/artikkelit/artikkelit/hotelNET.html

Pre-registration to the meeting:

PLEASE PRE-REGISTRATE TO ARI, OH5DX - email: oh5dx@sral.fi before
31.12.2002

More information coming soon. Please check out the CCF web at
www.qsl.net/ccf

WELCOME!

>exist!

Indeed a classic film, one that I've seen in Japanese with English subtitles decades ago...however, what has that to do with amateur radio policy? Other than in fevered imaginations of the already-licensed?

The setting of that film's time period was at least a century before the first radio communication was demonstrated (1896).

Perhaps you should have stayed with the Ayn Rand fiction novels as "models of moral-ethical character" for amateur radio? Or Monty Python skits from UK TV?

>If you want to talk philosophy, tell us what the producers of the world gain
>from the moochers and destroyers.

Tell us how all that applies to amateur radio policy, oh wise sage of the cinema.

How do lying braggarts who beep have anything to do
with either amateur radio policy or life in general? :-)

HF radio has the same physics for all radio services using that part of the EM spectrum. In the 1950s HF radio was the main medium for long-distance US military communications.

The US military had multichannel RADIO RELAY equipment since 1944. The US Army ALSO had single-channel radio repeaters as of 1952, a feature designed into manpack military radios as a siting option in the field.

The US military never had "widgets." :-)

>What was the closest you ever came to any member of any Communist
>military force during you active duty time? I wuz within 750 feet.

You were perhaps closer than that to the movie screen, ace.

You weren't ever "within 750 feet" of any USSR aircraft except one on static display at an airshow. :-)

How does all that fish-story-telling relate to amateur radio policy?

In the "5-9" signal reports given to another station? :-)

>Putz.

Tell us how you won the Vietnam War with your 20 WPM
catapult, Kellie. Some of us can't "bear" to wait... :-)

I have been in education as a public school student for 12 years, as an undergraduate in college (a church school) for 4 years, as a graduate student (at a state school) for 2 years, as a public school teacher in systems in Ohio and Indiana for 34 years (and in those 34 years have taught at the university level (at a state school) for parts of 5 years). I have NEVER, in all those years, with all those colleagues, with all those students, NEVER heard any professional colleague say or do anything even remotely like the following. The only time I have ever heard anything like this was out of the mouths of people trying to make public school teachers look like some kind of driveling idiots. To be this offended I had to read this in a Ham radio forum from someone from my own district. I am ashamed. You can back pedal or you can attack me -- I won't respond -- but the level of discourse among supposedly intelligent adults just took a deep dive.

Indeed! Another cool feature of this book is the inside covers. They
feature the picture of Guglielmo Marconi, Samuel Morse, etc. w/comment
bubbles (Like comics.) introducing themselves and outlining <in simple
terms> their contributions to the radio art.

> The site says it's a TRUE story, not fiction, and that the young ham

> to verify from historical accounts of the day.

BTW, his call sign was W2AZK. Throughout the book, his call is
referred to as 2AZK, but a QSL card up front displays the full call. A
woman from NJ currently holds this call. Great book though! My lass'
eyes lit up last night when I told her that this one is her very own
copy

>rental unit. Johnsville cut a contract with RCA, one of the line items
>in the contract called for RCA to supply some amount of tech labor so
>RCA shipped you off to NADC to fulfill that obligation.

Why must you rewrite history and facts? RCA Corporation's
contract on SECANT was with the Department of Transportation,

not with any "Johnsville." Naval Air Development Center was
the testing agency, assigned to that task within the government.

>RCA paid you
>for yer labor hours and yer expenses. As was the case then and still
>is the case with rental units. I've been one of those too Putz. Big
>frigging deal.

I didn't get any "yer" expense payment. Weren't no "yers" to be
had except on the last night in December. :-)

I received my regular salary from RCA plus the skimpy per diem
for living in wonderful downtown Bucks County. No time clock
punching. No allowed "frigging" either. :-)

>Don't bother with the circle-jerk Putz. The question on the table
>remains unanswered, under what conditions did you find yourself no
>longer working at NADC?

I didn't work for NADC or "Johnsville" or da gummint.

When the flight test period was over I flew back to Los Angeles
and the single RCA division on the west coast. Do you wish
to review my expense reports from 1972? :-) :-)

> 'Fess up Putz, get it off yer chest . . we'll
>be nice to you. I promise.

Naturally you will be nice. Your endearing names bespeak
tenderness, mercy, and too many reruns of "Sopranos." :-)

>Putz, you have an accredited baccalaureate degree in anything like I'm
>the King of England and that's the bottom line period.

Your majesty, why are you living in the former colonies?

>Yew are a
>WANNABE engineer and always will be PUTZ. Was it yer lousy SAT scores
>Putz? I noticed that the Army tossed you into a no-brainer MOS and
>kept you away from being able to screw the moose, they musta gotten
>the same drift.
>
>Putz.

...definitely too many episodes of the "Sopranos." Does Kellie
have them on DVD? :-)

Yet another unfinished thought. They're adding up, Dick.

If I had an interest, I might be one what?

Of course you've not made those claims. I never made the claim that the
CW order wire in use in State Department AFRECONE posts was my idea
either. That doesn't stop Len from utilzing the "Big Lie" over and over
again.

> Those who think differently are hereby challenged to come up with
> proof to the contrary. (Don't hold your breath, Dave).

He's never come up with the proof for the things he says I stated. I
have no reason to believe that he'll do so in your case.

> > Butting in on a newsgroup posting?
>
> The concept of free speech in a public forum is not grasped by some,

They agree? I figured that Len had Japan's drift calculated and that
his figures would be proven correct when he was honked that you didn't

use a modern map.

I was thinking about flight time from Cuba!

> Did you mean that only Americans older than a certain age (say, 40?)

No. Kids stopped doing air raid drills after I reached high school. Up
until that point, they were done on a regular basis in the three states
in which I resided while growing up.

He certainly wants to play the expert on most topics here. Any "mere
radio amateur" who has done anything else in life is rudely dismissed.
Len likes to think that he is the only person here who has worked
professionally in radio or electronics. 'Tain't so.

History time: Amateur calls in the USA started with numbers until the
late 1920s. This was true in most countries that had amateurs, so it
was easy to miss DX. How was 1XAM to know that 8AB was in France and
not western PA?

The temporary solution was to add "informal" prefixes to one's call.
These were shown lower-case. Most Americans used "nu" (North America,
United States) so 1TS night send "nu1TS" when the band was open.

The permanent solution was for each country to have its own defining
prefixes. USA got W, K, N and some of the A's. Before WW2, American
hams in the lower 48 used W, those outside used K.

The callsign districts were also different before WW2, with some split
states and no 0 calls.

In 1923, at the dawn of the shortwave era, he would have used 2AZK. A
few years later, W2AZK.

Which means you are expressing a value, or making a choice, about that
callsign as opposed to, say, W5TIS.

> > Suppose you were on the air and someone with a vanity callsign you are not

NONSENSE!

Evolution and God are not contradictory. That which cannot be seen can still be real.

Can you see sound waves?

Religious faith is rational belief in what cannot be proven...yet. Superstition is irrational belief. BIG difference.

If nothing else, we can count on you for laughs, Leonard. I haven't
observed Jim being angry, using false statements or name-calling. I
have, on the other hand, observed that behavior from you.

Fine thing for a man in his dotage.

Yep, takes lots of practice to do that, though some people may have enough
natural talent to learn to do that a lot quicker. My brother is a musician,
and an extremely talented one at that. He can play drums, guitar, keyboards,
as well as a number of wind instruments. It's almost scary how he can just
seem to pick up an instrument he's not familiar with and learns to play it
very well in a very short amount of time.

Perhaps their boats fueled up at the same port.

FWIW, I climbed up on a derelict mig17 at the mogadishu airfield. We
were warned not to climb inside the cockpit as the ejection seat
hadn't been blown yet.

The nuts that dislike K1MAN continue to jam his amateur radio bulletin service. I enjoy the K1MAN service. I wish those that did not like him, would just tune him off and goto another frequency.

This afternoon on 14.275MHZ, K1MAN was QRM'ed with music and a QSO on top of him. I almost picked up the phone called Mr. Hollingsworth, I was so disgusted. Why Hollingsworth allows this to continue, I do not know.

"Len Budney" <lbudney-google@nb.net> wrote

: ARE you agnostic? An agnostic is someone who says, "I don't know."
: Many today who call themselves agnostics actually believe that
: "definite answers to this question CANNOT be known."

The term "agnostic" was coined by Huxley. He adopted the term, he says, because it was suggestively antithetic to the 'Gnostics' (gnosis "knowledge", gnostikos, "good at knowing") of religious history, who professed to know so much about the very things of which he could find no way of knowing, other than blind acceptance. "The bible is true because the bible says the bible is true." Huxley rejected that circumpolar sort of validation.

Agnosticism is the position of believing that knowledge of the existence or non-existence of God is impossible. It is often put forth as a middle ground between theism and atheism. Understood this way, agnosticism is skepticism regarding all things theological. The agnostic holds that human knowledge is limited to the natural world, that the mind is incapable of knowledge of the supernatural. Understood this way, an agnostic could also be a theist or an atheist. The former is called a fideist, one who believes in God purely on faith. The latter is sometimes accused by theists of having faith in the non-existence of God, but the accusation is absurd and the expression meaningless. The agnostic simply finds no rational reason to believe in God.

If, based on this, you'd call me an atheist (I don't think I am one), then I submit that we are both atheists. I just believe in one fewer god than you do. When you understand why YOU dismiss all the other possible gods out there, you will understand why I dismiss yours.

I won't disparage your faith, or even suggest that you are wrong. I simply don't personally buy into it.

You gotta wonder about a dude who is compelled to use a screen name of "A very Fine man" on several usenet groups. Couple that with all the rest of the "stuff" we've seen from him and the question mark looms huge.

Sure looks like there are some "other things" he fears. Maybe he found himself wondering about it at times and decided to answer the question for himself in that way..

Carl:

Just for the record, are you a person with religious beliefs, or not? If so, what is your opinion of children being taught about the concept of God and religion in school? I'm not talking about actual religious instruction (which I would not expect in a public school), just teaching kids about the fact that religions exist, and that they are based on a belief on a supreme being (God). You seem quite worked up about the joke that was posted, and in my experience, that usually denotes some sort of identification with what was said. In which context do you identify with it?

Glad you brought this up Putz. We used monster steel concete ballasted wagons of various weights to calibrate the steam cats. 10,000 to 50,000 pounds, etc. They were just big dumb disposable weldments with salavge yard A/C wheels on all four corners. We hooked 'em the cats with bridles, set the shot pressures and fired 'em off the bow into the drink noting the end speeds as they departed. 0-175 mph with a 275 foot power stroke. For instance. From which data we drew up the catapult calibration curves. If the things managed to float after a shot, fine, a tug dragged 'em back and the Tillie dropped back on deck for reuse. If they sank oh well. There are large underwater areas of the Norfolk Naval Base and what was the Brooklyn Naval Shipyard littered with rusting old deadloads.

We had a moniker we used to to describe people like you Putz, "Deadload Pilot". There is no question in my mind that you would have very quickly been promoted to a flag rank deadload pilot if you were in my biz.

160 miles of drift between 1944 and 1952 is about 20 miles per year. At that
rate, Japan would be west of Korea by now.

~20 minutes for the type of missiles the Soviets had at the time, as I recall.
Not to worry - that type of missile couldn't reach Southern California from
Cuba. But they could reach Philly.

>in which I resided while growing up.

We never had 'em around here. Guess they figured that since Philly is halfway
between NYC and DC, we'd be goners.

Point is, folks around my age and younger grew up knowing that the missiles
could be here in under an hour.

Exactly. Remember how hard he tried to find out who I work for and what I do?

--

btw, fired up the homebrew CW transceiver on 40 an hour ago and a DL6 came back to my CQ. Nice 20 minute chat with Gunter.

You've seen comments he has made regarding my work, Steve's work and
Hans' military career. Now he wants to know Dick Carroll's military
background (but only so he can engage in civil debate only about the
removal of morse testing in amateur licensing).

If after the existing pool of callsigns are issued, that may be a possibility if we ever get a huge inrush of new hams. (and I mean more that what we have now) When they reach Z, ZZ or ZZZ as the suffix in the various classes, and after reusing some of the ones that were changed from upgrades or whatever reason, they may have to look at another format such as a 1x4 or maybe even a 3x3.

Who knows.... guess we will see when we get there...

> validation.

Note that there are non-circular arguments as well. Huxley liked to
imply that circular arguments were the only arguments available...

> Agnosticism is the position of believing that knowledge of the existence or
> non-existence of God is impossible...

Note that this is a belief based on blind faith: "knowledge of the
supernatural is impossible, because it is impossible". So you have
something in common with those whose beliefs you reject.

My observation was twofold:

1. The term "faith" does not mean "belief despite lack of evidence",
let alone "belief despite lots of contrary evidence". You were
describing "blind faith", not the sort of faith referred to in
scripture.

2. The belief that "God's existence is fundamentally unknowable" is a
doctrine which must be accepted on blind faith. Specifically, if it
happened to be true that God exists, it must also be true that He
could, if He chose, show Himself to you. Thus the question of God's
existence is, in theory, decidable.

Huxley would argue that if that happened, you could not be sure He was
really God--and no amount of argument, miraculous display, or anything
else would actually constitute "proof". In other words, Huxley's
belief is based on faith, and if hypothetically he was offered
"proof", he has decided in advance that no amount of proof would
suffice. So much for "abandoning circular reasoning"...

> I won't disparage your faith, or even suggest that you are wrong. I simply
> don't personally buy into it.

I don't disparage your views, either. But as a mathematician, I have
to point out when a "more logical" viewpoint is not one.

Nope. I started school in 1960.

Reminds me of the old Robert Klein routine about the drills. ("Child of the
'50s).

"Children, these tags are so we can identify your remains in the event of a
nuclear holocaust. I want two lines, no talking. We're going to have an orderly
nuclear holocaust. I'll be taking names!"
>>
>> Point is, folks around my age and younger grew up knowing that the missiles

>Korean War.

I don't know - I've never been to Japan.

But even us kids knew that while hostile airplanes could be shot down or turned
back, there was virtually no defense against incoming ICBMs and SLBMs. If the
keys ever got turned for-real, we were toast. And we knew it.

>> Exactly. Remember how hard he tried to find out who I work for and what I
>>do?
>
>You've seen comments he has made regarding my work, Steve's work and

Also the bad plays on names, ranks, ethnic origins.

Professional question, Dave: In government service today, if someone made a
point of constantly harping on somebody's name/ethnic origin ("Herr Heil",
"jackbooted thugs", etc.) in a hostile manner, would that violate harassment
guidelines? I know that in private industry such behavior would violate most

companies standards of professional behavior, but what about US govt.?

Definitley not right (and illegal) to Jam his Broadcast. I just wish the FCC would eliminate broadcasting on the amateur bands, including W1AW.

Poor putzie doesn't have a single useful clue, if he did he'd know that anything "contemporary" would include things in widespread use currently. Of course since he knows nothing about CONTEMPORARY ham radio, he can't be aware that Morse code on ham radio at HF is among the most used of modes.

You sure he isn't doing the ratdance?

How about it?

> Could mean a callsign for the Lotto.

Not obvious to most people. And I don't know anyone who would be
offended by hearing "WOW! Look at the size of the Lotto!" or "Nice
Lotto, huh?"

Are people in Texas offended by the Lotto?

> Wow, ever get into one of those debates?

About the Lotto? Only debate I ever got into was trying to convince a
mathematically-impaired person that the chances of winning were far
worse than he imagined. Guy did not understand permutations.

> Whew... I mean, just think of the
> callsigns that have been/could be/are issued that people could really be
> disgusted about.

There aren't many I can think of that are inappropriate for ham radio.
Besides ones like yours, Kim ;-)

...if Lottie playes the Lotto lots and lots.....

Everyone has religious beliefs. Even atheists. The person who says
"there is no God" has the nonexistence of a Supreme Being as part of
his/her religion.

> If
> so, what is your opinion of children being taught about the concept

Not all religions are based on belief in a God.

> You seem quite worked up about
> the joke that was posted, and in my experience, that usually denotes
> some sort of identification with what was said. In which context do
> you identify with it?

It wasn't a joke. It portrayed a teacher as stupid, and evolution as
anti-religion. In fact, it hardly portrayed evolution and science at

all.

What makes it really bad is the fact that some people are pushing pseudoscience into the curriculum, at the expense of critical thinking and real science. The Scopes monkey trial is still going on in some parts of the USA.

The *concept* of religion being taught in the public schools is a good idea. The actual teaching of specific religious beliefs as fact isn't.

Separation of church and state is one of the things that defines the USA. We have plenty of examples in the world today of what happens when that separation does not exist.

> called faith.

It's also avoiding the question: Can you not *imagine* a world that
would be pleasant without certain kinds of people in it?

"Faith" is what we a person believes without proof, and it is
necessary because we don't have proof of everything we want to know.
But faith is not an excuse for being illogical or avoiding judgement.

Consider this statement:

"We need thieves, robbers and burglars in our society, because if they
all disappeared, there would be no need for locks, alarms, and certain
kinds of insurance - and the people who make their living in those
industries would lose their jobs".

Logical or not?

> I do know there isn't a time in history in which "we"
> (people; humans) have not had to endure bitter times.

I disagree. What is known is that, for recorded history, we find that
there has always been some group of people who were enduring bad
times. That doesn't mean we must apathetically acccept evil and
suffering as some sort of necessity.

> I have to believe
> there is a reason, or a purpose, for that--or continue to ask the question
> why.

Sure - that's what YOU have to believe.

From the Book of Bokonon:

Tiger got to hunt
Bird got to fly,
Man got to wonder, "Why, why, why?"

Tiger got to sleep
Bird got to land,
Man got think he understand.

> > Ever see the Kurosawa classic, "The Seven Samurai"? Told a basic truth:

That's basic physics. It's how rockets work.

> It's probably much like
> Christianity's "to everything there is a turn..."

"To every thing there is a time, and a purpose under heaven".
Ecclesiastes, as I recall. Made popular in the song "Turn, Turn,
Turn". Best known version is the Byrds', but actually written by Pete
Seeger.

> I have not seen the movie "The Seven Samurai"; however I would have to
> challenge the tenet as being unprovable.

It's easily provable. If there are no bandits, will the farmers stop
raising food? Of course not. If there are no farmers, the bandits will
starve.

Somebody has to produce in order for there to be something to steal.
The producers do not need the moochers and thieves, but the moochers
and thieves need the producers.

> We've never had a world without challenge.

Doesn't mean progress is impossible.

150 years ago, in this very country, you could have gotten into a
serious "philosophical" argument that slavery was an economic
necessity. Millions of people accepted - no PROMOTED - the concept of
owning other innocent humans. Today we see slavery as fundamentally
immoral and illogical. The world is a better place without slavery.
> >
> > If you want to talk philosophy, tell us what the producers of the world

Doesn't mean we "need" them. We don't need to have people jumping off
of bridges and falling to their deaths to know it's a bad idea.

W1AW is transmitting legal and authorized bulletins for the Amateur
community.

K1MAN is broadcasting a 'variety' show with plagerized material.

"Bad things" (evil persons) do not exist for some heavenly purpose. But if you insist on seeking a divine purpose, then I offer you the following from the First Book of Bokonon.

73, de Hans, K0HB

In the beginning, God created the earth, and he looked upon it in His cosmic loneliness.

And God said, "Let Us make living creatures out of mud, so the mud can see what We have done." And God created every living creature that now moveth, and one was man. Mud as man alone could speak. God leaned close as mud as man sat up, looked around, and spoke. Man blinked. "What is the purpose of all this?" he asked politely.

"Everything must have a purpose?" asked God.

"Certainly," said man.

"Then I leave it to you to think of one for all this," said God.

And He went away.

You got proof of that? Of course you don't. Those ARRL reports are aired on 2 meter repeaters all the time. I bet Mr. Hollingsworth is sitting in his office, just laughing at you. Do you know that Holligsworth once worked with Nextel, to help them win contracts with the FCC. I bet you when he retires, he is gonna use a case file, that he is building with every day, to sell off the ham bands, and put lots of money is his pocket. Not yours or mine. Every day you and ND8V jam K1MAN, it gives Hollingsworth another entry into his file, and another nail in the coffin of Ham Radio.

Think about it.

Great, use a gas station map to plot air miles.

With lat/lon of both points you should be able to calculate the
distance w/o a map. Look up, "Great Circle."

> >> >> I used the above map because it shows the airline distance from

I'm not in Texas, but I find the lottory (and all gambling) offensive.
Gambling is either near to a sickness or a sickness. That it is
subsidized and promoted by the states is quite annoying to me.

Besides, it is annoying to stand in line at a store behind of of the
addicted and wait while they put their numbers in or scratch n' lose
their money away.

And just to add insult to insult, the addicted's losses are tax
deductable. Sheesh!

I think I am a person with religious beliefs. I wouldn't want those beliefs to have to pass muster with most of the individuals I know who are back-thumpingly sure of WJWD -- but yes.

I don't know how one could not teach that religions exist. How could one teach about the Spanish colonization of the Americas without reference to the role of the Roman Catholic Church? How could one teach about the Crusades without acknowledging the two opposing religious forces? I also know that much of what could be taught

historically is fraught with potential disaster for the teacher because it doesn't say what this group or that group wants it to say. Most, then, would take the safe way out and avoid the topic rather than run afoul. How? Well, there was a colleague of mine who was called on the carpet with a parental complaint because he made the statement that "historically, Jesus was a Jew." That's no joke made up to prove my point. It's an example of the conumdrum in which teachers find themselves

I thought I explained why I was worked up about the joke. I am sick to death of radicals from both sides of the spectrum creating "straw man" arguments and passing that off as "Gospel." (pun intended). "But it's just a joke!" Humor is cruel. There has been no finer (equal, but not superior) public instituion than the American public school system. Every child, no matter what gender, what race, what socio-economic background, has a ride on the carousel and a chance at the silver ring. Every child. Has there been waste? Yes. Have we adopted silly or unfounded practices? Yes. But there is no other educational system in the world so closely related to the principles of democracy as practiced in the US. Are there better systems? For what purpose? To perpetuate a class system? To assure that only the "brightest and the best" get to go on?

Indeed it is. Maybe we should also teach "Flat Earth" in school.

> The *concept* of religion being taught in the public schools is a good
> idea. The actual teaching of specific religious beliefs as fact isn't.

And there can be a thin line there. Often things are just fine until
they start talking about a religion which someone doesn't care for.
(more often someone's parents) "It's all fun and games until someone's
eye is put out"

I went to a school in a community where the hot topic issues were
controlled by the religious zealots. NOt only was evolution not taught,
but most anything not required by the state that was possible to lead
to talking about evolution was nixed. It was amazing that in the '70's
we didn't cover paleontology or the like.

On top of that, I was almost finished with my "sex education" class
before I realized that was what it was. What tipped me off was that they

started talking about VD. We were told to avoid it, but not even how you caught it. That was it. nothing else.

I remember that the students were concerned about this, and a number of us went to a school board meeting where the topic would be discussed. One of the religious zealot parents actually brought in a Penthouse magazine and when it was his turn to talk, he stood and in full zeal, he spoke of the sinful ways of the school, the students, and then in full view of all us kids (probably 30 of us) he whips out the Penthouse and opens the centerfold, and shows it, proclaiming "This is what they are teaching our kids in school these days!" Needless to say, he was admonished, but amazingly, not ejected. Most of the male students who attended were hoping he would come to more meetings!! ;^)

But coming from a school system where the religious ruled the roost, and where nothing got taught unless THEY approved of it, I know firsthand what they have in mind. How would anyone convince me otherwise?

The simultaneous teaching of Evolution and one religion's version of how this place got started is a foot in the door tactic. There is no doubt that that group wants only the religious aspect (theirs, BTW) - taught at all.

> Separation of church and state is one of the things that defines the

I don't need to prove a thing...all you have to do is listen to K1MANs bullshit. Anyone with any sense knows what he is doing. Which apparantly elliminates you from the equation.

I dont Jam K1MAN and never have. The rules state and the FCC agrees that IF someone or group is on frequency when K1MAN begins his tapecast...it is LEGAL TO REMAIN ON FREQUENCY AS LONG AS YOU WANT.

Don't belive me? Drop Mr. H a line at RHOLLING@fcc.gov

Have a nice day numbnuts.

Here's something negative from the ARRL. The ARRL doesn't say if the
examinees only took 8 minutes.

NEWINGTON, CT, Dec 12, 2002--The FCC has completed its review of ARRL
VEC Amateur Radio examination sessions held in 1999 and 2000 in
Cookeville, Tennessee, and in Trumbull, Connecticut in 2002. A probe
of a 2000 ARRL VEC exam session in Pelham, Georgia, continues.

The Cookeville case involved exam sessions on December 14, 1999, and
on March 11, 2000. In a November 18 letter to ARRL VEC Manager Bart
Jahnke, W9JJ, FCC Special Counsel Riley Hollingsworth recommended that
the ARRL VEC no longer accept the volunteer examiner services of five
amateurs involved with the sessions. He named James N. Keaton, W4SOH;
Maria C. Droke, KC4FLW; George S. Droke, W5SD; Bobby A. Raymer, N2BR;
and Steven G. Hunter, KF4FAV.

Hollingsworth said the FCC's decision was based on the fact that members of the VE team participated in the examination of applicants they knew--or should have known--to be related to certain VEs, contrary to ï¿½97.509(d) of the FCC rules. He further noted that the actual examination location and date of one of the tests--for a disabled person--were concealed and represented to be at a different location and date.

"Please emphasize to your VEs that every participating or administering VE shares responsibility for the administration, oversight and integrity of the test session," Hollingsworth told Jahnke, whom he also thanked for his cooperation in the matter. The FCC launched its probe after the ARRL VEC called apparent discrepancies at the Cookeville sessions to the Commission's attention.

In a separate letter November 20 to Gary E. Hunter, KG4FRN, the brother of former VE Stephen G. Hunter, the FCC downgraded Gary Hunter's license from Amateur Extra to Technician--his previous license class prior to the Cookeville session administered in part by his brother. The wife of Bobby Raymer, Kathy J. Raymer, ex-KG4FWO, also had been credited with having passed exam elements at the session. Kathy Raymer agreed earlier this year to forfeit her Technician license.

FCC rule ï¿½97.509(d) prohibits a VE from administering an examination to a close relative. The list includes spouses, children, grandchildren, stepchildren, parents, grandparents, stepparents, siblings and stepsiblings, aunts, uncles, nieces, nephews and in-laws.

Regarding the Trumbull, Connecticut, review, Hollingsworth wrote Jahnke on November 14 that 9 of the 10 VEs administering the session "followed proper testing procedures" and that the FCC has no objection to their being reinstated as VEs. All 10 volunteer examiners had been suspended from the ARRL VEC program in 2001 for the duration of the FCC probe--standard procedure in such instances.

Jahnke says the nine VEs Hollingsworth named in his letter have been returned to the active list. Those reinstated were ARRL VEC VEs Kevin W. Cellini, N1GKM; Glenn J. Krieger, N1HAW; Allen H. Silberstein, N1RWE; Andres A. Rosado, KB1FKJ; Robert E. Moreland, KA1ZMF; Peter J. Keyes, N1GOJ; Donald W. Stowe, N1VNM; Arthur L. Cartier, III, N1VGT; and Kenneth A. Frissora, N1JKA.

Hollingsworth said the 10th VE, Freddy Martin, W1BIQ (ex-KB1FKI), continues to be suspended from the roster of active ARRL VEC VEs, per his June 28, 2001, letter initiating the inquiry. He said he anticipates no further action in the case.

Hollingsworth initially cited Trumbull session documents that he'd said "reflect several alarming discrepancies in testing procedures." The ARRL VEC had referred the test documents to the FCC as part of its responsibilities as a Volunteer Examiner Coordinator.

The probe had focused on discrepancies in documents submitted on behalf of one applicant--Elvis Mendez, KB1GPY--who had attempted to upgrade to Extra at the May 10 session. It was believed that the candidate may have had access to the answer key used by VEs for grading Morse code examinations or that his answer sheet may have been completed prior to the examination. The applicant's answer sheet also had contained "a significant number of erasures" to VE grading marks and to the score of the applicant's Extra class written exam. Mendez' Extra exam was invalidated as a result of the discrepancies.

Hollingsworth also requested in a November 12 letter to Jahnke that the ARRL VEC not accept the services of VEs who had proctored a June 10, 2000, exam session in Pelham, Georgia, at least until questions surrounding the session's administration have been resolved. The ARRL VEC has supplied information in that case to the FCC.

They measure our reaction, we measure theirs. That's how the game was played.

They were probably listening. Anything visual would have been gravy.

Quote FCC rule. If so, then does it apply to the interCON phone patch net?

Too many double standards coming from Holingsworth.

RE-read my comments, Dan. It's people like you who put nails in the coffin.
I was not the one who threatened people over the air. I did'nt get on the
air and make certain people "my business"

I'm working on upgrading to General class this next year. I plan on getting
on 17 meters and 15 meters. No contesting, just getting on the air and
having fun. No fights on the air.

and I am....

We also have plenty of examples why *anything* religious doesn't need to be
in public school curriculums.

Whole bunch of stuff going on. They take pictures and see who came out on deck. Listen for radars and communications. Note if there have been any changes in the various ships since the last time. Etc.

Plus a lot of it is just "see what the other guy does" and "paybacks" (like for U2 flights and spy satellites).

>It was an inexcusable, childish, stupid and dangerous Soviet game is
>what it was.
>
Both sides played games like that. I oughta lend ya my copy of "Blind Man's Bluff", about the role of submarines in the Cold War. Some of the things done were pretty aggressive, like tapping Soviet underwater military communications cables in the Barents Sea and the Sea of Okhotsk. And following their missile

subs so closely that underwater collisions sometimes resulted.

Correction to some typos:

From the Book of Bokonon:

Tiger got to hunt
Bird got to fly,
Man got to wonder, "Why, why, why?"

Tiger got to sleep
Bird got to land,
Man got to think he understand.

It's easily provable. If there are no bandits, will the farmers stop raising food? Of course not. If there are no farmers, the bandits will starve.

Or turn into farmers - and again there will be no bandits.

Somebody has to produce in order for there to be something to steal. The producers do not need the moochers and thieves, but the moochers and thieves need the producers.

>
> And there can be a thin line there. Often things are just fine until
>they start talking about a religion which someone doesn't care for.
>(more often someone's parents)

I think the real problem is that almost all organized religions have some
skeletons in their closets. And most "holy" books have some contradictions
built into them.

For example, Genesis has two contradictory creation stories in it. In the first story (Chapter 1 and the first few verses of Chapter 2), God creates the heavens and the earth and all of the animals first. Man (and woman) are the last things created, and given "dominion" over the earth and other creatures.

But in Chapter 2, there's another creation story. It says that after God created the heavens and the earth, but when there was no fiueld shrub nor green grass on the earth, God created man from clay. After that, God created the Garden of Eden, with all the plants. Only after all that was done did God create the animals and birds, intending them to be companions for man. Finally, woman is created from Adam's rib.

Now it's clear that both stories cannot be literally true, because the sequence of events in each one contradicts the other. So the creation stories are obviously not meant to be taken literally. Yet people try to "prove" that the universe is only a little more than 6000 years old....

Or consider the story of Noah and the ark. (The Titanic was built and operated by professionals, but the ark was built and operated by amateurs).

The Bible tells us how big the ark was, and that Noah took two of each animal on board. Yet if we look around and start lining up pairs of animals, it's obvious that a boat the size of the ark isn't nearly big enough to hold even a fraction of the different species, let alone food for them. So either many of the animals we know today only appeared after the flood (proof of evolution?) or they survived the flood somehow without going on the ark at all.

Historic note: There is significant evidence that the Black Sea was once a fresh water lake, isolated from the Mediterranean and much smaller and lower than it is today. It was surrounded by many prehistoric human settlements. The evidence strongly suggests that at the end of the last Ice Age, the glaciers melted and the sea rose to the point where the Med overflowed into the Black Sea via the Bosporus. The level of the water rose quickly (500 feet or more in depth in a few days/weeks) wiping out lakeside settlements and causing widespread devastation. The survivors of such a catastrophe would hand the story down for many generations.

To me, the biggest problem there is applying the term "science" to something
that obviously isn't science at all, but rather an attemot to make the evidence
fit a literal interpretation of a nonscientific book that isn't meant to be
taken literally at all.

Yea, verily!!

Here's another one: The original version of the Pledge of Allegiance did not
have the words "under God" in it. They were added much later.

And therein lies a lot of the problem, high paid administrators
and low paid teachers. My wife taught 11 years of high school and
often had to purchase teaching aids out of her own pocket, as the
school bean counters said there was no money in the budget for
this or that. However, you can bet if the school superintendent
needed a new high dollar leather chair for his office or the
football coach needed an expensive gizmo for the training room the
money was there.
It is amazing that we have school systems that pays the lowest
wages to those that are attempting to impart the knowledge to
students to make it in the world, the teachers. The same system
that will pay some coach who teaches them how to bash their brains
out on a football field, a skill that only one it a couple hundred
may possibly ever use, the highest wages.

Heh heh, one of my favorite stories! When a fundy engages me about the
Noah legend, there are a vouple questions that get rid of the
"scientific" argument real quick.

Where did the water come from?

Where did it go to when the flood was done?

After some fumbling replies:

calculate the amount of water to cover the entire earth to
cover and go above Mount Everest?

Then the more silly but important questions:

Did the animals in Australia swim from their homes, across the
Pacific and Indian oceans to get to the Middle East so that they
wouldn't drown?

>Historic note: There is significant evidence that the Black Sea was once a

Yes, I've heard of this. A more rational explanation for sure. Many
religions have a flood legend, which indicates that something almost
certainly did happen.

It must have been an incredible event!

But a localized (if very big locale) event nonetheless.

And there is no problem with accepting the biblical account as
a localized event. It wasn't until much much later that world maps
evolved from the old T-O world maps to at least the more advanced
Terra incognita maps that acknowledged that the world was not a small
flat area.

Oh, those were interesting times in the Adult entertainment
industry! They were just starting to show parts of the anatomy that
weren't shown before, and us kids were being a nuisance, stealing our
parents copies and all.

But before we just sound like a bunch of hedonists, after the
joking tapered off, we were kind of angry. Partly on account of the
fac that this dud is trying to say that we were being taught that in
school while nothing of the sort is happening, and more subtley that
many of the kids attending were young ladies we went to school with,
and all joking aside, we didn't like this jackass showing them that
centerfold. Some of them were our girlfriends and close friends. Yeah,
I know, sounds like a double standard, but I'm talking about teenage
boys and girls.

True, but according to those same rules the calls used for broadcast
stations in the US should belong to the 'fixed service' instead, aircraft
should have calls like ham calls but with a hyphen instead of the number,
etc. I could go on, but the fact is the amateur service is the only
service where the FCC issues the correct series of calls according to ITU
rules, for every other service the FCC either issues calls that rightly
belong to another service or calls in some other series that they thought
up themselves. Many services are not supposed to even be issued calls
atall according to ITU rules, unless they cross international borders.
Apart from ham calls, where they follow the letter of the rules, in every
other case the only thing they get right is that they do at least keep to
only US prefixes!

I know the type, one of my brothers has turned into one in the last few years. I'm a person who has faith, not "religion." I was born and raised Catholic, and there wasn't a beating I didn't get during my parochial school so-called "education." The fact that I haven't been entirely turned off to the concept of faith is only due to the fact that I have seen God work in my life. However, IMHO, my belief doesn't qualify me to tell other people they're going to Hell (I find it difficult to believe that a merciful God would create such a place) if they don't believe the same way I do.

>arguments and passing that off as "Gospel." (pun intended). "But it's
>just a joke!" Humor is cruel. There has been no finer (equal, but not
>superior) public instituion than the American public school system.

I'd have to challenge that. I see a lot of mediocrity in our public school systems. In my state (Delaware) we have about 38 separate school systems, each with their own complete set of high-paid administrators and support staff, but a total statewide student population which would

be only one district in any other big state! I would just love to be the one put in charge of finding out just exactly what each and every one of these so-called "administrators" was doing to justify their salary. And, considering the fact that a lot of them are graduates of Delaware State University, I'd also like to see if they themselves can pass a basic literacy test.

>Every child, no matter what gender, what race, what socio-economic
>background, has a ride on the carousel and a chance at the silver
>ring. Every child. Has there been waste? Yes. Have we adopted silly or
>unfounded practices? Yes.

Answering "yes" to these questions provides no comfort. Our school systems are supposedly being administered by intelligent and educated people, who should possess basic competency in their jobs. In my absolutely free-of-charge opinion, this is a joke. A lot of people running our schools and teaching in the classrooms are from the bottom of the academic ladder -- especially in my state.

>But there is no other educational system in
>the world so closely related to the principles of democracy as
>practiced in the US. Are there better systems? For what purpose? To
>perpetuate a class system? To assure that only the "brightest and the
>best" get to go on?

I say yes, that's right. Private schools can attract teachers with the best academic credentials, and they usually produce the results which do tend to create students destined to occupy the "upper" class in our society. Public schools are limited by the fact that they are forced to apply lot of politically-correct policies which have nothing to do with educating students. Then there is the old saying "Those who can, do; those who can't, teach." I believe this is a basic flaw in our public education system. The teachers are people who have never had to make a living doing anything but teaching. I think this needs to be changed. The college I attended (Wilmington College, Delaware) is a model of the way things should be. I was a "non-traditional" student who attended classes at night, being taught primarily by adjunct faculty who were working professionals in the fields they taught. It made a big difference, and they were able to impart knowledge in a much more effective manner because they really knew what they were talking about. I'd like to see this concept extended to the entire educational system, from the elementary grades up. I believe that older, more mature teachers with "real world" working experience, would be more effective in every way, from maintaining order in the classroom to imparting their knowledge in a manner which better relates to the subject at hand. If only it were possible.

Is that the straight word, Admiral? "Insider stuff" from the Pentagon?

This all sounds like the "colonel" whose "son was behind enemy lines in Iraq during the Gulf War, sending intel via manual telegraphy." In here about four or so years ago.

Good for alt.sandwich.phony.baloney newsgroup. Bogus. False. Lies which were "rationalized" under some "secrecy" claims and "my son never lied to his father" nonsense. The claimed "colonel" later retracted the story and never showed up again.

Close-up photos of a Bear at low altitude were published in a number of periodicals during the latter part of the Vietnam War such as Aviation Week & Space Technology, TIME, LIFE, etc. It's not any stretch of the imagination to consider that someone impressed with such photos might later claim to have "taken lots of photos," knowing that it was not provable in a newsgroup which doesn't allow binaries of images.

A claim of "having the negatives" is also suspect of being a phony one. Consider that date-stamping negatives didn't come into practice until about a decade ago in cameras which included that feature. Only a very few photographic developing services in the world did date-marking negative film prior to 1980...and those were primarily for commercial photographs. Even if someone "had the negatives," how is that provable as to when the image was taken and how is it

traceable to the claimant's camera?

Answer (for the newsgroup): It is considered "truthful" by
those who agree with the claimant on morse code issues.

Anyplace else it is just a fish story.

An altitude of 750 feet MSL is still relatively high. In order to
show sufficient imagery detail to perceive the aircraft IS the
planform of a Bear, the camera must have a moderate to long
telephoto lens (85mm or longer for the average 35mm camera)
and the common, garden-variety snapshot camera can't get
enough detail to show much of anything that far up.

>>I looked around the deck just after
>>his pass and there were guys with cameras everywhere, seamen to
>>scrambled-eggs types. "Photo recon" . . yeah, right, all he got was
>>shots of maybe a hundred of us getting shots of him. Had to be an
>>intelligence goldmine.
>
>Whole bunch of stuff going on. They take pictures and see who came out on
>deck.
>Listen for radars and communications. Note if there have been any changes in
>the various ships since the last time. Etc.

So...this is more "insider" information on ELINT techniques and
general Military Intelligence operations from someone who has
never served in a military or claimed any government service?

>Plus a lot of it is just "see what the other guy does" and "paybacks" (like
>for U2 flights and spy satellites).

Oh, my, more "insider" information? Why don't you describe the
U-2's old reconnaisance flight recorder? It was a dandy magnetic
tape unit with large nested tape reels. The USSR took nice photos
of that which were in Electronics magazine (the old bi-weekly) and
AW&ST magazine. [they presumably still "have the negatives"]
I happen to know the US company that made it and also the
ground-support equipment that read the tape...and the person who
wrote the final test procedure for that ground-support equipment
and saw the whole black-box system that went on the old U-2.

No, I don't "have the negatives" to prove that, but can describe it
in enough detail to someone else who had seen it to constitute
proof as to the truthfulness of both parties. Neither yourself nor
Kelly are "proof" to anything other than agreeing on fish-story
content.

>>It was an inexcusable, childish, stupid and dangerous Soviet game is
>>what it was.
>>
>Both sides played games like that. I oughta lend ya my copy of "Blind Man's
>Bluff", about the role of submarines in the Cold War. Some of the things done

>subs so closely that underwater collisions sometimes resulted.

James Bamford writes well but is better in "Body of Secrets"
about the history of the NSA. That's his latest work and
available through that "bankrupt" company called Amazon.

If you have some idea (provable) on tapping underwater FIBER
OPTIC cables without being detected, rush immediately to the
US government with that information. Do not post it in here.

If you want to natter about some latest whiz-bangy techno-
thrilling adventure, you can read a Tom Clancy novel (instead
of Kurt Vonnegut) and transfer them in here as something
you "know about." Either author does FICTION well...and
fantasy-fiction is the underlying reason for retaining the morse
code test for a hobby activity license that does not involve
some secret intelligence work.

ALL radio works on the reality of physics, not some imaginings
between the ears (covered or not by headphones). Try not to
confuse the sayings of a Bokkonon as that of a real person.

Seeing who comes out on deck falls under ELINT, Len? I expected better
from someone who was actually in the military, even if in the distant
past.

I don't know about the others, Len, but I'm starting to be impressed.
How can we be certain of the truthfulness of the other party who has
"seen it" though?

Sure is warm and cozy here in the lodge hall, Len. The old timers are
gathered by the fire. Later, there will be a simple ceremony honoring
the recently licensed children. I thought I caught a glimpse of you
watching through a frosted window pane earlier.

I sympathize with your feelings here, but it is also worth noting that districts with highly paid teachers do not have proportionally better academic outcomes. It's not clear that doubling teachers' salaries will make the kids any smarter.

Oh?

I have pics of my Novice station from January 1973, and very clearly marked in the margins is "JAN 73".

My dad had some pics of me from 1966, 67, all were date stamped from the developer in 1967, 68.

Just your run-of-the mill rant stampeeded by facts to the contrary...AGAIN.

>So...this is more "insider" information on ELINT techniques and
> general Military Intelligence operations from someone who has

And from a Rear Area Widget radio clerk that never served in combat or was deployed to the field, what would YOU know about "ELINT" that you didn't read in the aforementioned copies of "Aviation Week and Space Technology"...???

More Newsgroup obfuscation and belligerence by someone who places little value on truth or facts...Thanks, Lennie. Always trust you for setting a standard by which silliness can be measured.

Steve

And THAT's the real problem. Most of the major "organized" religions,
westerna and eastern, start looking pretty bad from a historical point
of view.

Me, too. I also see a lot of excellence. Remember, Carl is talking
about public institutions.

> In my state (Delaware) we have about 38 separate school
> systems, each with their own complete set of high-paid administrators
> and support staff, but a total statewide student population which would
> be only one district in any other big state!

Whoa there - what sort of numbers are we talking about?

Here in PA, school districts are typically equivalent to a township or city. (Radnor Township = Radnor school district - about 3,500 students). In some cases, adjoining small townships have created a joint district. (Tredyffrin and Easttown townships have a joint school district, referred to by the locals as "TE"). The big cities, like Philadelphia, have enormous districts - hundreds of thousands of students. And enormous problems.

The reason for so many districts is simple: People don't want to surrender local control of the public schools. Nor do they want to be responsible for the problems of "other" districts.

Lot of issues tied into it. Folks in high-performing District A don't want the high performance diluted by merging with lower-performing District B. Folks in District B don't want the high taxes and high responsibilities of District A, nor the fact that the folks in District A will tell them how things should be run because, after all, District A is higher-performing.

> I would just love to be the
> one put in charge of finding out just exactly what each and every one
> of these so-called "administrators" was doing to justify their salary.

I can tell you what each administrator in my district does. Also most of the teachers and support personnel.

> And, considering the fact that a lot of them are graduates of Delaware
> State University, I'd also like to see if they themselves can pass a
> basic literacy test.

All of the local school personnel I've come into contact with read and write at least as well as I do. Most have at least as much education (in their fields) as I do, if not more.

>
> I say yes, that's right.

??

Public schooling is based on the idea (Jefferson?) that a
representative govt. requires an educated populace. Also based on the
pragmatic idea that money invested in educating the masses is paid
back in productivity many times over. The past 225+ years of US
history kinda back that up.

> Private schools can attract teachers with the best
> academic credentials, and they usually produce the results which do
> tend to create students destined to occupy the "upper" class in our
> society.

SOME private schools can do that - mostly universities.

> Public schools are limited by the fact that they are forced to
> apply lot of politically-correct policies which have nothing to do with
> educating students.

Like what? Give us some examples.

> Then there is the old saying "Those who can, do;
> those who can't, teach."

There are lots of old sayings that are pure bullshit. That's one of
'em.

The main problems with public schooling are:

1) The public schools have to serve every single student in the
district. Private schools can pick and choose who they accept. This
means the private schools cherry-pick the students with lots of
resources. Private schools can also refuse to accept, and expel at
will any student that doesn't meet their requirements. Public schools
can't.

2) The public schools do not have direct control over their funding,
but are directly controlled in their requirements. Public schools have
to answer to at least three levels of mandates (district, state and
federal). But most of their mandates are "bricks without straw" - the
mandating body tells them what they must do, but doesn't give them
resources to do it. Private schools can raise tuition as needed, shut

down unprofitable operations, and not offer some things (like
transportation) that public schools must provide.

> I believe this is a basic flaw in our public
> education system. The teachers are people who have never had to
> make a living doing anything but teaching.

How is that a bad thing? Have you ever taught a class of, say, 30
fourth graders, all with different personalities and needs, meeting
all of the various requirements and requests from all of the governing
bodies? And do it to a tight schedule, with a limited budget, for an
entire school year?

Try it some time and tell me it's not a serious job.

> I think this needs to be
> changed. The college I attended (Wilmington College, Delaware) is
> a model of the way things should be. I was a "non-traditional" student
> who attended classes at night, being taught primarily by adjunct
> faculty who were working professionals in the fields they taught. It
> made a big difference, and they were able to impart knowledge in a
> much more effective manner because they really knew what they
> were talking about.

University level education is an entirely different thing. The classes
are short (three hours a week, typical) and subject-specific. The
university is not required to accept anyone they don't want to accept.
Students have to pay their way, and are expected to bring appropriate
background knowledge and skills to class. If a student doesn't do the
work, they fail, tough noogies.

Are you saying that elementary school should be taught that way?

> I'd like to see this concept extended to the
> entire educational system, from the elementary grades up.

Are you volunteering to teach kindergarteners?

> I believe
> that older, more mature teachers with "real world" working
> experience, would be more effective in every way, from maintaining
> order in the classroom to imparting their knowledge in a manner
> which better relates to the subject at hand. If only it were possible.

Sure it's possible. First, go back to school and get the credits to be
certified as a primary school teacher. Then, get a job as a
kindergarten teacher (most districts only have half-day kindergartens,
so it's only a half-day job, right?). Then spend a school year
teaching 20 or so little kids AND working another job, AND meeting all
the requirements of both jobs.

See you in class.

Presuming that the ham has a license which includes 10M privileges (not all
of them do), then he can use any radio he pleases on 10M. Of course if he
transmits the roger beep and echo, his fellow hams might encourage him to
have the radio crushed.

as long as it satisfies the technical requirements for out of band emissions and bandwidths of signals he can use it within the limits of his license in the 10m band. unless he has proper equipment to check these parameters he could be held liable for interference cause by the radio generating spurs or other unwanted emissions.

there may be other questions about the legality of the sale itself and the status of the radio as far as fcc type acceptance for sale as an amateur radio.

Hans IS a "believer", Larry. He just doesn't believe the things you
want him to believe.

> If I were you, I'd count my blessings and thank God for each and
> every one of them!

How does one "thank God" for a blessing?

To my way of thinking, the capacity for rational thought is one of
humanity's greatest blessings. Seems to me that the way to "thank God"
for that blessing
is to use that capacity to the fullest extent possible, as often as
possible.

Remember the parable of the talents?

> However, I'm not you, and you are free to
> think as you please.

Some Americans would change that.

>After all, this is America!

What I cannot understand is how the K1MAN content meets the
regulations. Section 97.111 b (6) Transmissions necessary to
disseminate information bulletins;
How is a so called talk show, editorials, etc an information bulletin?

Amateur "indians" live on reservations, restricted to few activities.
While their on-off keyed smoke signals are generated by the
latest word in imported blankets, smoke signals are still the
slowest of all communications, unused by those not forced to
live on reservations.

Yes, the initiation rites (a hazing) are stupid and unneccessary
in this day and age, still practiced on the reservation due to all
the old self-styled "chiefs" waving their greying bird feathers as
if they could "lead" any ignorant young braves into some "battle."

Go and chew some more buffalo jerky. All you are able to do
now is spit and try to jerky others into your little inner circle of
shameless shamanism of "glory in the reservation." There is no
glory there despite you "bureau of indian affairs" (ARRL) who has
led you mighty "chiefs" on a circle jerky inside the reservation.

You are NOT Chief Sitting Bull. You are simply bull.

>> Brian got it right...
>
>Brian's post was one word. He still managed to screw it up.

Brian Burke's post was TWO words. Try to get it right next time, little taunto.

Burke was right.

Its not. Mr Baxter has been trying for years to force a confrontation with the FCC and the ARRL. Up until his recent re-occupation of 14.275 no one really stood and fought him about it.

Now we have a radio war going on. Thanks to K1MAN. Everyone is a loser of course. Have you noticed how few calls he actually gets? Tell you something? Does me....most of the hams know he is nothing but a troublemaker.

>Amateur "indians" live on reservations, restricted to few activities.

Spoken like a true outsider! Someone with nary a clue as to what is
possible with an Amateur Radio license.

In other words, showing off what an ignorant putz he REALLY is.

>Yes, the initiation rites (a hazing) are stupid and unneccessary
> in this day and age, still practiced on the reservation due to all
> the old self-styled "chiefs" waving their greying bird feathers as
> if they could "lead" any ignorant young braves into some "battle.

Wrong. The "initiation rite", as refered to by "The Ignorant One", is
part and parcel of a treaty signed by the United States government, and as such
is not unilaterally waiveable by any subordinate agency of that government.

Willful misrepresentation of that fact by a person alleged to be a "radio
professional" can only be categorized as a lie. In this case just one more
overt attempt by a cowardly, sulking old man to try an make an impression on a
world he was unable to manipulate in "his day"...Now pumped up by the "power"
of the Internet, only to be undone by one indelible truth...The Truth IS the
Truth, and no amount of misrepresentation or wordsmithing can make it anything
else.

>Go and chew some more buffalo jerky.

Almost all of the bull here is generated by you, Oh Lying One.

>All you are able to do
> now is spit and try to jerky others into your little inner circle of

The black & white shots I took were processed and cataloged by the
NAEC photo lab and were date-stamped as are all negs & prints which
pass thru gummint photo labs. The color shots were taken with
Agfachrome 50 transparency film and date stamped by the Agfa lab.

> You're simply pathetic, Leonard.

Fer cripes sake . . I used my Honeywell Pentax H3v equipped with a
50mm f/1.8 Takumar lens and loaded with Plus-X film. I took the color
shots with a Honeywell Pentax Spotmatic equipped with an indentical
lens. I got off three shots of the guy with the H3v when he was over
and almost over the ship. The Navy lab souped the film with Microdol
cut 1:1 for max sharpness with min grain. Same recipe I used in my own
darkroom. By the time the lab got done diddling with those negs with
an enlarger ya could count the rivets on the engine shrounds and
flaps. Today I have maybe a dozen cameras including four Nikon bodies
and ten Nikkor lenses. My written orders were to go aboard to "observe
and photograph". And I did. "Snapshooter". Right.

I was actually on a secret mission. Since you're cleared Dave I can
spill the beans. Besides all the visible reasons for taking that jaunt
it was actually a sales trip. I went aboard to dredge up projects for
myself and the rest of my group back in Philly off the orders. Work,
work, money, money. I was a 100% commercial engineering whore back
then and I still am so I was a bit of an oddball as gummint folk go.

My 2" thick trip report with the photos got enough attention up the line to break loose funding for a huge volume of man-hours worth of labor. Mission accomplished. Din hear any bitching from the fleet for that one, we fixed all kinds of awshits for them which would have fallen thru the bureuacrat's cracks in their floors and would never have gotten to our shop floor thru "channels".

Jim, I really wasn't trying to avoid the question...I don't know that I'd do
that. However, your question is fair. I can imagine all kinds of
hypothetical worlds, so yes, I can imagine a world that would be pleasant
even without certain kinds of people--because I suppose at that point my
imagination would make it so. But, imagination and reality are two entirely
different things.

I think you just said the same thing I have. There has always been some group of people who were enduring bad times, is equal to: there isn't a time in history in which we have not had to endure bitter times, isn't it?

I don't know a thing of the Book of Bokonon--don't even know to what you refer. However, I don't ask why, why, why. I really don't. Maybe that's a shortcoming of mine, I don't know.

If there are no farmers, the farmers will starve, i.e., we would *all* be
gone and it all becomes a moot point.

I rather think we all need each other. Mind you, I wouldn't thank a creep
for being around; but I'd sure be asking myself why I happened to be around
that creep or vice versa, and what it is that destiny has chosen for me to
learn from it.

You missed another possibility: Noah clearly understood animal husbandry and
genetics--*and* had the capability to collect and store semen and eggs.

In article <d22b54c3.0212131559.52afba6d@posting.google.com>, kelly@dvol.com (Brian Kelly) writes:

>The black & white shots I took were processed and cataloged by the
>NAEC photo lab and were date-stamped as are all negs & prints which
>pass thru gummint photo labs.

Did you have written permission to have your personal film processed by a "gummint" photo lab? Remember, according to ROI in here, it's "illegal" without written permission.

>The color shots were taken with
>Agfachrome 50 transparency film and date stamped by the Agfa lab.

...then that would be POSITIVES, not negatives. Get it straight.

>Fer cripes sake . . I used my Honeywell Pentax H3v equipped with a
>50mm f/1.8 Takumar lens and loaded with Plus-X film. I took the color
>shots with a Honeywell Pentax Spotmatic equipped with an indentical
>lens. I got off three shots of the guy with the H3v when he was over
>and almost over the ship.

Name-dropping and bullshitting again, senior. A 50mm lens is the "normal" focal length variety used for nice pictures of family and friends, roughly the field of view of the human eye. If you want to get some resolution (with any film variety, any development) you want a 135mm telephoto lens up front to get close to getting a large wingspan in the narrower field of view. You would also need a fast shutter speed...1/500th or 1/1000th second to avoid blur and other motion effects.

>The Navy lab souped the film with Microdol
>cut 1:1 for max sharpness with min grain. Same recipe I used in my own
>darkroom. By the time the lab got done diddling with those negs with
>an enlarger ya could count the rivets on the engine shrounds and
>flaps.

More bullshit. Name-dropping an old developer with Plus X (Eastman Kodak) doesn't prove a damn thing other than being able to read old Eastman publications. Plus X is ASA 50, rather slow as film speeds go.

With a standard 50mm lens up front anyone could tell there were engines on a Bear...but NOWHERE close to "counting the rivits." Try not to snow those that have been doing photography on a more advanced level for 50 years... including developing, printing, and enlarging.

>Today I have maybe a dozen cameras including four Nikon bodies
>and ten Nikkor lenses. My written orders were to go aboard to "observe
>and photograph". And I did. "Snapshooter". Right.

You could have the entire inventory of Ritz Camera and still come
out implausible. Anyone who wanted "intel" (HAW!) on some
non-friendly aircraft sufficient to "count rivits" would have used a
TELEPHOTO up front.

>I was actually on a secret mission.

Of course you were, Mr. Secret Agent Man. So secret that
NO ONE knew it until this sub-thread started. Wonderful how
coincidences happen, isn't it?

>... Besides all the visible reasons for taking that jaunt
>it was actually a sales trip.

...and you are still "selling" in here. Nobody's buying.

>My 2" thick trip report with the photos got enough attention up the
>line to break loose funding for a huge volume of man-hours worth of

>that one, we fixed all kinds of awshits for them which would have
>fallen thru the bureuacrat's cracks in their floors and would never
>have gotten to our shop floor thru "channels".

Ah, yes, the self-made HERO by your own definition.

Sounds suspiciously like Roll's own desk-general "expertise"
where "he knew more than his commanding officer." Yah, yah.

>Somebody please close the damned curtains.

Yes, the hot air is definitely uncomfortable from all the
catapult claims wafted over all the "rental unit" swine in here.

How can Kellie possibly survive among all the ordinary folk
who work for employers in here? ["rental units"]

So, didn't the masterbeeper overhaul the radio comm gear
while "not going through channels?" Geez, that could have
gotten a nice shiny oak leaf cluster on the Hero medal.

The "Book of Bokonon quotations" are a fictious artifact
used by science-fantasy writer Kurt Vonnegut.

It's a literary device to give an author's work some "style"
and enable a stronger escape to a fictious "world" for
readers. It's amusing considering that "Bartlett's Familiar
Quotations" has enough REAL people quotes to make
taglines from here to the middle of the millennium.

Those who use fictitious quotes often could be classified
as "cult followers" such as those believing in myths ("CW
gets through when NOTHING ELSE will").

> service.

I don't consider myself a "nut", although others may disagree. I certainly don't know enough about K1MAN to like him or dislike him personally. What I DO know is that Part 97 says that nobody owns a frequency. K1MAN himself doesn't listen to a frequency before he starts transmitting; his "Radio Shack Timer" just starts things rolling and QRMs whoever happens to be on "his" frequency at the time. His defense is that he's advertised his schedule, and people should know better.

He doesn't own "his" frequencies, and stomping on people who happen to be using them qualifies as "harmful interference" according to Part 97. Whether I like K1MAN or not is irrelevent. His behavior says he's not a hero, he's just a plain old asshole who thinks he doesn't need to live by the same rules as other amateurs.

>maybe even a 3x3.
>
>Who knows.... guess we will see when we get there...
>
Let's do the math...

The number of suffixes from AAA to ZZZ is 17,576. Say 17,500 to allow for
certain calls being "inappropriate".

The number of possible prefixes from WA to WZ is 26. Add in KA to KZ and NA to
NZ and we get 78. Say 70 to allow for some not being issued. 10 call district
gives us 700 possible prefixes.

700 times 17,500 is 12,250,000 possible 2x3 calls.

The derivation of the number of 1x2, 2x1, 2x2 and 1x3 calls is left to the
reader.

Australian aborigines have lots of interesting creation legends, all of them
passed down orally. When carefully analyzed, some of them point to the idea
that the aboriginal people got to Australia during the last Ice Age, when the

oceans were much lower than today. They describe places that are now
underwater.
>
> It must have been an incredible event!
>
> But a localized (if very big locale) event nonetheless.

And the theory is that it happened over a few days/weeks, which fits the
Biblical story quite well.

Imagine such an event from the viewpoint of those who experienced it.Remember
that many prehistoric peoples lived in the same places in essentially the same
ways for hundreds or thousands of years. They and their ancestors knew "the
world" as the lake and the land around it, unchanging for countless
generations.

Then all of a sudden the rains start, the lake rises and submerges everything.
A few take to the boats and are saved. Maybe there was one man who had the
vision to build a special-purpose boat ahead of time, and bring animals aboard.

> And there is no problem with accepting the biblical account as
>a localized event. It wasn't until much much later that world maps

Funny how all that has changed. I recall when Rob and Laura Petrie slept in
twin beds with buttoned-to-the-neck pajamas. Now the same station shows
"Temptation Island".

>
> By the time you get to zealotry, tolerance and diversity
>pretty much go out the window.

Perhaps zealotry is the wrong word. How about "deeply held values and convictions"?

Pennsylvania was founded by as a "Holy Experiment" - the idea that religion should not be forced on anyone, and practically all religions tolerated on an equal basis. (Obviously a religion that requires, say, the murder of unbelievers cannot be tolerated in a free society).

> These people KNOW EXACTLY what you are
>supposed to believe and EXACTLY how you are supposed to behave.

Ideological absolutism is the problem. Whether it's the Spanish Inquisition or the "Final Solution".
>
>>Here's another one: The original version of the Pledge of Allegiance did not

It's not the size of the Lotto but the chances of winning that interest me.....

>> Are people in Texas offended by the Lotto?

>I'm not in Texas, but I find the lottory (and all gambling) offensive.

So do many folks. Others find it an enjoyable pastime.

>Gambling is either near to a sickness or a sickness.

For some people, it becomes an negative addictive behavior.

Problem is, outlawing gambling entirely does not stop it, same as for alcohol or other addictions. Should we outlaw ethanol beverages because of their destructive effect on society? Wait, that's been tried already....

>That it is
>subsidized and promoted by the states is quite annoying to me.

The sad fact is that state lotteries are a form of "voluntary" taxation that is highly regressive. Their existence is due in large part to the political reality that it's political suicide to raise taxes. Lotteries generate revenue without that negative political fallout.

Just human nature, I guess:

When I was a kid, the local parish made serious money from the Friday night bingo game. Even non-Catholics would show up to play. Then a new pastor took over, and he abolished the game, saying people should just put that money in the collection basket on Sunday. Parish had a deficit for years and years.

I recall reading that about 20 years ago there was a decrepit bridge across the Ohio River that needed demolition. Trouble was, it was such an old bridge that

responsibility for its demolition was unclear. Finally a solution was devised: The least expensive way to demolish the bridge was with explosives - cost, about $1 million total. They ran a lottery, $1 a ticket, winner gets to push the button that blows the bridge. They sold out the tickets in a matter of days, and the whole thing turned into a big party.

Me, I don't gamble. Went to Atlantic City once since they built the big casinos. Was pretty clear to me that they were the result of people going home with a lot less money than they brought.

> Besides, it is annoying to stand in line at a store behind of of the
>addicted and wait while they put their numbers in or scratch n' lose
>their money away.

I avoid those stores.
>
> And just to add insult to insult, the addicted's losses are tax
>deductable. Sheesh!

In some ways, that's the worst, because it rewards a destructive habit.

Thats what I want to know If it is illegal to buy, is it not illegal to use?
How did you get it ? How come Yaseu etc have to wait for type certification
before they can sell radios to hams? Why are these radios different if they
are?

Agreed. So, what are you gonna do about it? Since Riley seems to be giving
asshole MAN a free ride, what are you gonna do?
K1MAN is in violation of many rules. He is an arrogant anal aperture...but
what can we do about him? Nothing, simple as that. Nothing.
If you or I jam him we are violating the terms of our Ham licenses. It
stinks, does it not? Butthole Glenn Baxter can jam us and not look backwards
but we better not do as he does?
Riley seems to be staying at arm's length on this one....why? When Riley has
the audacity to ask certain Hams to cease txmitting on certain freqs. why
then can he not also ask K1MAN to do the same?
Something stinks in Mudville and Riley ain't telling the whole truth....

The above rule SHOULD apply to W1AW also. Their broadcasting falls within
the same parameters that K1MAN falls into. Like it or not, guys, you either
accept both broadcasting stations or you accept neither. Baxter, despite
being hateful, is doing nothing more than what the ARRL is doing.
In all fairness if you wish to ban one, you should ban both.
The bottom line is, who cares?
When only 20% or less of licensed Hams belong to the ARRL....well, why
bother? The ARRL has nobody to blame but themselves.
Maybe if they raise their rates again they will get more members.....DUH!

Yes. W1AW is just as much in violation as K1MAN. What is the REAL
difference? Think about it...there is none. Be honest. Be realistic and look
it from both sides.
Me? Heck. I do not care one bit for either...one is as bad as the other. I
could not care less for the ARRL agenda and I could care even less for
K1MAN' s stupidity.
Should I join? Join what?
Sorry guys, but I am gonna pass all of you up. I have better things to
do with my time.

they
> are?
>
>
ah, but that is the real odd quirk. it may not be illegal for a ham to buy
it, but it is illegal for a dealer to sell it. hams buy and sell non type
accepted radios all the time, and in fact can construct their own radios
with no fcc authorization, as long as they take responsibility for them
meeting the technical requirements for power and bandwidths. you could
legally buy any type of radio, even if it has capabilities for transmitting
outside amateur bands, and as long as you operate it within the limits of
your license you are legal. other radio services are all limited to type
accepted radios, so a radio sold for use as a CB must meet the requirements
for that service, land mobile radios must meet those requirements, etc.
personally i wouldn't trust that radio without having it checked out closely
for spurs and signal quality, in many of those modified cb's they are
pushing the output transistors well beyond what they were originally
designed for, and they have broadened the tuning of the output so it covers
the wider bandwidth. but when they do it they pay no attention to how clean
the signal is. i regularly hear some cb'er on 27025 or 27085 out of the new
orleans area splattering all the way up above 28500, and i'm in
massachussetts... of course he's probably running one of those 35kw cw
amplifiers on top of his junky radio.

Written permission for what? I was a Navy civilian professional on
Navy business on a Navy ship. I dropped off the film, filled out the
sheet, gave 'em the charge number and asked the lab to make contact
sheets and it went from there. WTF??

> >Fer cripes sake . . I used my Honeywell Pentax H3v equipped with a

> including developing, printing, and enlarging.

50 years at the "advanced level" in the photo game and you say 35mm Plus-X is an ASA 50 film eh Putz? Plus-X is today and was back then a common drugstore-available ASA 125 film. Anybody who screws up something that dirt-simple fundamental to anything above snapshot photography, which you just did, clearly demonstrates that they don't know squat about photogarphy. Hell, you didn't even get yer Web search for Plus-X right.

You add new meanings to the terms "bullshit artist" and "wannabe".

All this being the case any further "dialog" anybody has with you on the subjects of lens choices, enlarger operations and resolutions down to the rivet levels is like a dialog with a box of rocks.

50 years in a darkroom . . 50 years of flogging yer log is more like it . . .

You know better than that Putz, cut the crap. "Rental units" are
temps, "contractors", disposibles. Like you were. Not direct
employees.

>

Nah Putz, I simply brought back a stack of snaps which in the end
triggered a helluva lot more work than the usual Telexes did over the
same timeframes.

Really? Pretty big reservations, I'd say. What are these restrictions,
Leonard? Why haven't you attempted to meet the qualifications for
induction into the tribe?

> While their on-off keyed smoke signals are generated by the

I think Martti can get this one done without me, but it's Dave who is
his protege. Maybe the State Department can get Dave over there on a
secret mission.

But I do wonder if the video presentation will be via amateur
frequencies?

And it's just plain N0iMD now. I could be portable 8 if there were a
requirement to claim "portable," and if I had written permission.

Thanks for the thoughts, though.

Hans, you should realize that the order of the exact answers to the exact questions are scrambled, and if you were to actually take the exam, answering "E" would be right only about 25% of the time.

Thus, on his General test, he might actually want to read the questions and answers before selecting the correct answer. That might slow him down and the whole thing might end up taking more than 8 minutes. He has to weigh the risks of getting too many wrong and not collecting $250.

>
>Really? Pretty big reservations, I'd say. What are these restrictions,
>Leonard? Why haven't you attempted to meet the qualifications for
>induction into the tribe?

Why does Heil continually insist that the only "qualification"
for talking about "the tribe" is to be a "tribal member?!?"

He is no "chief," merely an elder who has been puffing on
his own unpeaceful pipe too long, counting coup in his mind.

The "reservation" is relatively small considering the big,
wide world of radio surrounding it where the overwhelming
majority of humans (of many "nations") live.

>Let's see...I have a variety of operating modes available to me in the
>amateur service and I use many of them. You can do what in the amateur
>service?

Irrelevant...that is trying to force everything back into the
Heilian fantasy of "one cannot talk about getting into amateur
radio without being already in it." Bogus. False. Elitism.
Something of an ultimate snobbery in regards to "turf."

All of the laws and regulations regarding amateur radio are as
open to commentary and change inducement as every other
radio service in the USA...yet you attempt some form of control
and censorship (however slight) by intimidation that "one must
be already in to talk about getting in" or the elitist "no citizen
has any right to talk about something they are not in."

>I'll bet you say that to all those who are permitted to do something
>denied to you. Everything is stupid and unnecessary to those who aren't
>able to meet the qualifications.

Laws and regulations regarding US radio regulation do not pertain solely to individuals either in or out of that radio service. The FCC's task is to regulate ALL US civil radio for the benefit of ALL citizens.

Heil wishes to create the artificial environment where only those who met PAST "qualifications" are "authorized" to remark on the laws and regulations of the PRESENT and the FUTURE. That's an artificiality based largely on his self-defined "qualifications." The FCC grants amateur licenses as part of its regulatory task.

FCC amateur license grants are NOT an academic certificate that "qualifies" any licensee as any sort of knowledgeable radio operator or radio station controller. It is merely a grant of permission to operate only in certain allocated frequency bands, using certain allocated transmission modes and modulations. That grant does not come close to the possible frequencies, modes, or modulations available to the rest of the radio world.

>My little inner circle consists of 600,000+ in the U.S.

Heil imagines himself of some importance in an "inner circle." There are approximately 300 million citizens of the USA and the FCC regulates ALL US civil radio for ALL the citizens. All the rest of the USA radio services way outnumber the radio amateurs in quantity...and most often in quality although some self-styled, self-important amateurs insist they are both "more important" and "more qualified" than professionals in radio.

>Does the name "Custer" mean anything to you?

In reference to Lt. Col. George Armstrong Custer, commander of the US 7th Cavalry in 1876, it means a totally inept tactician who graduated LAST in his West Point class, whose "expertise" as an Army commander was based largely on personality, not capability or qualifications...other than being able to survive the US Civil War. He could be described as a salesman disguised as an Army officer.

On June 25th, 1876 (approximately 20 years before the first demonstration of radio communications in Italy and Russia), Custer was baited into a trap in a corner of what is now Montana, was outmanuevered, outgunned, outfought by native Americans. Custer's ineptitude as a supposedly "qualified" leader was responsible for the needless deaths of 210 soldiers of five companies of the 7th in addition to himself.

>> You are NOT Chief Sitting Bull. You are simply bull.

That still applies.

>>
>> Brian Burke's post was TWO words. Try to get it right next
>> time, little taunto.

>
>I gave him the "OK" and the period. He even got ten points for spelling
>his name correctly.

Heil is not qualified to "award points" or much of anything else,
including trying to take credit in a newsgroup for some inane
"use of CW as an order-wire on a government RTTY circuit" that
was later rationalized as "State Department procedure, to which
non-department personnel were not 'authorized' to know."

>> Burke was right.

He still is...and "big chief" Heil is just a "little endian" in a
computer, a floating point wrong end to...

>Security must have been pretty lax in those days. A civilian on a
>military vessel taking photographs while on a "secret mission."

It has been "revealed" that a self-described "civilian whore" was
acting under "official orders" in taking "authorized, government-
developed photographs" yet being able to "keep the negatives"
to later impress and astound younger folk...by legendary words.

Kellie must be so impressed with himself that he has "forgotten"
some very, very basic field-of-view rules of optics in lenses that
were known before his existance and still apply today. Yet, all
must pay homage to this "veteran" of the "gummint" because of
unverified and unverifiable claims of extracurricular "intel" duties.

Oddly, all the "claims" have nothing to do with radio, not even
touching amateur radio. All must believe the beeperistic BS as
"truth" because a long-time amateur licensee supposedly dit it.

>No wonder n0dick won't share with us his military experience. In
>comparison to Secret Agent Kelly, what would be the point?

N-zero-dick supposedly "served two hitches" in the US Army,
was "trained in the Army as a broadcast studio technician (at
Fort Monmouth)" and hasn't said word one on any Army duty
outside of CONUS during any officially-stated war period. In
addition to that, he stated that "the FCC came to him and others
at Fort Monmouth so that they could be tested for both amateur
and commercial licenses" while in the military service. Even
though N-zero-dick couldn't make it through the fourth commercial

test element to pass a First Radiotelephone...he is still a self-described "expert" in all of radio, "always ready for an emergency to the point of carrying a manual telegraph key in his car."

Do you really think that ANY government would take such individuals seriously for ANY sort of intelligence work?!? :-)

Sorry, you MUST have WRITTEN PERMISSION to do anything
outside US territorial waters in accordance with the Rules of
Engagement in this newsgroup as established by former
member of the US Department of State.

Official photography for the US military does NOT result in the
official photographer "keeping the negatives."

"Contact sheets" in reference to photography refers to 1:1 ratio
prints on photo print paper, nearly always done by placing
developed negatives (dried) directly on slow-speed photo print
paper, exposing it and developing the print paper. This is
useful for reference of which 35mm frame is what on a roll of
20 or 36 frames. With 1:1 contact prints the image size is
very small and it takes magnification to tell the number of
engines of a bomber image and IMPOSSIBLE to resolve detail
enough to "count rivets."

>50 years at the "advanced level" in the photo game and you say 35mm
>Plus-X is an ASA 50 film eh Putz? Plus-X is today and was back then a
>common drugstore-available ASA 125 film.

Sorry, "Mr. Eastman," you don't know your own product, certainly
not the 5-roll bulk 35mm available in 1951.

That's a very minor technical point on film. Nearly ANY black-and-white film can be "pushed" to a higher speed rating (more sensitive to light than manufacturer's ratings) with a number of developing solutions. All the black-and-white films were re-rated higher on the market later. The same with color print and transparency film.

MUCH MORE BASIC is optics and field of view...that of getting an image ONTO the film. With longer focal length lenses, the image on the film plane is larger. If the film plane image is larger, it can resolve more detail of the image.

With 35mm film cameras, a 50mm focal length lens approximates the field of width of the human eye. In still photography (as opposed to motion pictures) the focal length must be longer than 50mm to gather image information comparable to the human eye. The reason for that is head-eye movement while viewing brings more eye sensors into play for the brain's image resolution. The brain can somehow "resolve" better by some yet-unknown mental process.

To resolve more detail on an object "750 feet" away, a 35mm camera needs at least a 135mm focal length lens to capture enough detail on an object such as a large bomber "to count the rivets." One can determine that trigonometrically or simply get longer focal length lenses and do a photographic comparison of any object.

> Anybody who screws up
>something that dirt-simple fundamental to anything above snapshot
>photography, which you just did, clearly demonstrates that they don't
>know squat about photogarphy. Hell, you didn't even get yer Web search
>for Plus-X right.

I don't know anything about "photogarphy," just ordinary PHOTOGRAPHY. Simple stuff, really, it's what a high school kid can learn. It's what I learned beginning in 1949, something fun as well as an addition to tools of the artist-illustrator.

The "ASA speeds" of film were lower way back then and still only the recommended light ratings. I quit with black-and-white film around 1968 since more color was shot (mostly positives, commonly called "slides").

Trouble here is that Kellie wants to belabor ancient history (a common newsgroup tactic of beepers, by observation) in only certain things/mentions. Much more basic is lens optics which Kellie has (conveniently?) overlooked.

>You add new meanings to the terms "bullshit artist" and "wannabe".

No. I have ample evidence of photographic ability as well as that of an artist-illustrator. Being visual mediums they can be readily compared by sighted persons. Not only that, I've sold both photographs and art work...although that was not an object of "interest" it can classify me as a professional (work done for pecuniary interest) there part of the time. Six examples of my

photography were printed by the Pacific Stars and Stripes on
November 10th this year (only 5 are included in the web archive).
Stars and Stripes had a much larger choice (over 600) to chose
from 1953-1956 and over a month to select and verify them.

>All this being the case any further "dialog" anybody has with you on
>the subjects of lens choices, enlarger operations and resolutions down
>to the rivet levels is like a dialog with a box of rocks.

Optics is basic to photography...just as radio physics is basic
to knowledge of radio. Someone can bullshit their way through
a DX claim when no one has heard the distant station. Similarly,
and more noticeably, that same someone can bullshit their way
about some "photographic ability/genius/collection" without
presenting some proof of such ability.

Kellie's "I've got the negatives!" claim is fraught with suspicion.
First of all, "gummint developing" had a procedure for keeping
truly official negative (and positive masters) for archival purposes.
Black and white prints are another thing and it is not unusual to
give official copies of prints to individuals in such photographs.
Intelligence operatives do NOT get to keep their officially-
authorized photographic "negatives." There is NO copyright
protection for US government text or photos for non-restricted
material. Anyone, including non-USA citizens, can reproduce
such work as they wish. As an example, Hasselblad (corporate
headquarters in Goteborg, Sweden) has been able to reproduce
hundreds of NASA images in advertising/promotional literature
without cost to them. Several US radio amateurs are able to
offer reproductions of many older, unrestricted US radio
technical manuals without paying any fees for such reproduction.

>50 years in a darkroom . . 50 years of flogging yer log is more like
>it . . .

My "log" has been in many forests, has never had any problems
in its "trunk." Sorry to hear of your "trunk" problems...get well
soon.

>See above Putz. I know what lenses to use when. Which you obviously
>don't.

...then you've not demonstrated such knowledge by claiming to
have achieved high-resolution imagery using a 50mm focal length
lens in a 35mm film camera. You should have claimed at least an
80mm focal length lens (commonly called a "portrait lens") or a
medium telephoto 135mm focal length. Film "grain" is finite and
no amount of even special developing can bring out detail in small
images that is smaller than the "grain" size.

This is similar to the alleged "26 patents" Kellie said he had some
while ago. A search of US patents revealed only ONE patent with
Kellie as co-inventor. My patent (sole inventor) is on a radio

system, not a machinery bearing.

>Nah, no big secret at all. Neither are the circumstances surrounding
>your abrupt mid-project departure from NADC Johnsville.

Tsk, tsk, tsk, Kellie still trying to belabor a falsity. To repeat, I must re-state old, verifiable material:

1. Naval Air Development Center was located in Warminster, PA, 1971 through 1975. NADC had previously been known as "Johnsville" in reference to a nearby locality.

2. I was employed by RCA Corporation 1967-1975, Electromagnetic and Aviation Systems Division (EASD), Van Nuys, CA.

3. RCA had an L-Band collision avoidance R&D program called SECANT with three separate phases of development. I worked on all three phases in design of the IF and RF sections. Funding came from the Department of Transportation, US government, final flight testing done by NADC, arranged within government.

4. I was tasked as the on-site RCA representative/field-engineer on the first phase of SECANT flight tests, late 1971 through early 1972. The first "abrupt departure" was a break for Christmas and New Year's holiday period. The second was due to finishing first-phase flight testing by NADC. At no time was my employment ever terminated at RCA until November 1975 and the entire R&D team disbanded along with most of the rest of the division.

In my grammar school, they made the kids buy the stuff.

> It is amazing that we have school systems that pays the lowest
> wages to those that are attempting to impart the knowledge to
> students to make it in the world, the teachers.

A lot of towns and cities see the schools as a cost they try
to minimize. Especially if a lot of the taxpayers don't have
kids in the system. Towns prefer to get office buildings
over housing developments, as the former doesn't generate
kids, and is easy to police.

And if teaching doesn't pay that well, a lot of the smarter
people won't go into it. I had a lot of dumb teachers.
One in grammar school was a science teacher that didn't
know crap about science. And for algebra 2 I had a teacher
who specialized in history and wasn't that good at math.
Someone good at math probably goes into computer
science and gets 4 times more pay writing software.

Big-headed Baxter is jamming again. The trouble is he uses his "broadcast"
to make personal attacks upon Riley and other Hams who have displeased him.
This fat head rectal cavity should have his license pulled for malicious
interference as has been done to several others.
Why has this not happened? Riley? Huh?

I was talking to a co-worker's teenage kid at the company picnic
once. He said school wasn't worth the hassle. I said that if he
sticks with it, he can get a better paying job later on. "You'll
get your payoff, I get paid about 8 times what I'd get flipping
burgers, and I stuck thru the school and college thing. The
government funds the schools because when you're grown up
you'll get better paying jobs and pay more income tax. You win,
and they win." That's easier to understand and buy than saying
that knowing about Shakespeare and the arts is good for you.

And don't forget that college profs don't really care if the students
pass or not. It doesn't show in their yearly review (or equivalent).
What is reviewed is their research projects and papers published
and how much NSF funding they fetch for the college. Thus most
profs see teaching undergraduates as a big waste of their time, like
taking out the garbage. And when they get tenure....

> can't.

School vouchers are little more than a scam. There's only so many
seats in a school. And the private schools are full anyway. Vouchers
will just make it cheaper for the parents of kids already there, or
allow the private schools to raise their rates. And that just drains
off money from the public schools. So low income parents get
shafted as their kids get even crappier schooling.

>

30 is too many kids. That happens because that is how many kids
will physically fit in a standard size classroom without the fire
marshal freaking out.

> work, they fail, tough noogies.

And such students know why they are taking those classes, and thus
motivated. But in grammar school kids don't see the point of it, especially
stuff like knowing trivia about King Louie the 6th or memorizing poems
about trees. I ran across a poem I had to memorize in grammar school,
and as an adult it didn't make anymore sense now than it did in school.
Okay, I'm not an english major, but a good friend who graduated as
an english major at Notre Dame said it didn't make sense to him
either. The teacher said "memorize this poem, you are required to
parrot it back in class tomorrow." We parroted the thing, and then
moved on to something else. No analyzing the poem, what it meant,
or such. What's the point of memorizing the damn thing, then?

>
>
> Are you saying that elementary school should be taught that way?

Ideally in early grammar school you'd want to get the kids to
want to learn stuff. And somewhere in high school it's more
up to the kids to study, and if they don't, they look forward to
a career flipping burgers. In grammar school I had no idea what
my father did at work other than that he caught the bus in the
morning, did "something" in an "office", and returned home for
dinner. School was little more than doing stuff that teachers
wanted because if you didn't they'd beat the crap out of you.
A 4th grade teacher assigned so much homework you wouldn't
get done until 10PM. Lots of written work and reading the
textbooks. I did the written because that produced hard
copy to prove you did it, but she couldn't prove that I didn't
do the reading (I read it but forgot...). Once I had to get
the spelling class list of words and I called the teacher at home.
Next day she was pissed that I bothered her. But she didn't
mind bothering me with all that homework..... (I reciprocate
I see no reason to be polite to you if you're rude to me.)

>Why does Heil continually insist that the only "qualification"
> for talking about "the tribe" is to be a "tribal member?!?

One cannot be a Marine without going to boot camp. Nor can one be a car driver without a drivers license. Yet Lennie wants to be an Amateur Radio operator without taking the Amateur Radio examinations.

What a bliterhing IDIOT!

>He is no "chief," merely an elder who has been puffing on
> his own unpeaceful pipe too long, counting coup in his mind

He doesn't need to be a "Chief" in order to know the law.

>The "reservation" is relatively small considering the big,
> wide world of radio surrounding it where the overwhelming
> majority of humans (of many "nations") live

The "reservation" of Amateur Radio is wide open. It's "inhabitants" can roam freely and do more things wthout further adieu that "Mr. Commercial Phone" cannot do. Mr Commercial Phone requires an employer with a specific frequency allocation on a station license ion order to be able to "operate".

Mr. Commerical Phone cannot pick and choose his operating mode nor can he choose the hours that he operates. Nor can he select what "programming" that is sent.

Considering the liberties it grants, the Amateur Radio license grants a world of freedom Mr. Commercial Phone can only read about. He's on the outside looking in. What a pitiful loser...pug nose pressed to the window, whining about being excluded, all-the-while an open door is only a couple steps to the side...

>Irrelevant...that is trying to force everything back into the
> Heilian fantasy of "one cannot talk about getting into amateur
> radio without being already in it." Bogus. False. Elitism.
> Something of an ultimate snobbery in regards to "turf.

Dave said NOT ONE WORD about "talking about gettign into" Amatuer Radio. He's talking about being IN Amateur Radio and the privileges that a license conveys.

Nice try to meld the apples and oranges, Lennie.

>All of the laws and regulations regarding amateur radio are as
> open to commentary and change inducement as every other
> radio service in the USA...yet you attempt some form of control
> and censorship (however slight) by intimidation that "one must
> be already in to talk about getting in" or the elitist "no citizen
> has any right to talk about something they are not in."

Nice try here, too...That's not what he said, although I am sure the
accusation of "censorship" makes you feel as though you are justified in being
stupid.

Sorry. In your case "stupid" is forever.

>>I'll bet you say that to all those who are permitted to do something
>>denied to you. Everything is stupid and unnecessary to those who aren't
>>able to meet the qualifications.
>
> Laws and regulations regarding US radio regulation do not pertain
> solely to individuals either in or out of that radio service. The FCC's
> task is to regulate ALL US civil radio for the benefit of ALL citizens

Ahhhh...But Dave...Amateur Radio is not "denied" to him...HE denies
himself the opportunity to participate! There IS a difference!

>Heil wishes to create the artificial environment where only those
> who met PAST "qualifications" are "authorized" to remark on the
> laws and regulations of the PRESENT and the FUTURE.

Nope. There are a great many folks in this forum who have met "PRESENT"
qualifications. YOU are NOT one of them.

>FCC amateur license grants are NOT an academic certificate
> that "qualifies" any licensee as any sort of knowledgeable radio
> operator or radio station controller.

Here goes Mr Fifteen Years Of Night School back into his rant about what
the FCC license is or isn't.

>It is merely...(SNIP)

Easy to "minimize" when you don't have one and you spend countelss hours
harasssing those who do.......

>That grant does not come close to the possible frequencies,
> modes, or modulations available to the rest of the radio world.

PLEASE, Lennie...PLEASE cite for me what other license in the United
States grants as much privilege and access to teh spectrum as an Amateur Radio
license in one grant...?!?!?

>>Does the name "Custer" mean anything to you?
>
> In reference to Lt. Col. George Armstrong Custer...(SNIP)

Oh geeze, Dave, I will SPANK you! Gave Lennie the Limp a foot in the door
to go on a two paragraph cut-and-paste rant on non-Amateur Radio policy stuff

again!

Steve

3679. Another Question For Lennie to Ignore

Newsgroup: rec.radio.amateur.policy

Message-id: <20021214164805.13161.00000073@mb-fr.aol.com>

>FCC amateur license grants are NOT an academic certificate
>that "qualifies" any licensee as any sort of knowledgeable radio
>operator or radio station controller. It is merely a grant of
>permission to operate only in certain allocated frequency bands,
>using certain allocated transmission modes and modulations.
>That grant does not come close to the possible frequencies,
>modes, or modulations available to the rest of the radio world.

Lennie...WHAT other operator/station license issued by the FCC grants the
privileges or the freedom of choice that the Amateur License grants?

The GROL, the only license you possess, specifically states that you
cannot operate a transmitter that does not have a valid station license issued
to it by the FCC. Per present FCC database, YOU do not posses any such grant.

The ONLY transmitter(s) you may operate (Part 15 and 95 not withstanding)
MUST have a specific operating frequency, mode and various other technial
parameters spelled out in the grant.

On the otherhand an Amateur licensee may operate QRP SSB on 160 meters at
one moment, but then then turn around and bounce over a kilowatt of power off
the moon on the opposite end of the electromagnetic spectrum.

PLEASE, Lennie...PLEASE cite the license grant available to anyone that
grants THAT kind of freedom.

We'll be watching you for your response, Lennie. We are ALL watching.

I recall one old timer on here, could have been N0dICK - maybe it was GrayJL, making CW testing related to Chicoms overrunning his position. Sounds like Korea time frame.

In

Ahem, except the time Hans invited him for a CW qso. "...too far away from the big house radio and commercial power." He must have one of those forklift radios with a vibrator power supply.

> Do you really think that ANY government would take such
> individuals seriously for ANY sort of intelligence work?!? :-)

You'd be amazed. The police use runny nosed drug addicts as informants all the time.

I don't think you intended to avoid the question, Kim.

>However, your question is fair. I can imagine all kinds of
>hypothetical worlds, so yes, I can imagine a world that would be pleasant
>even without certain kinds of people--because I suppose at that point my
>imagination would make it so.

Exactly!

The question was whether I/we/you can imagine a pleasant world without certain
kinds of people (terrorists, bandits, those bent on destruction). You've just
confirmed the idea that you as well as I can, indeed, imagine such a world.
That contradicts your earlier statement, but that's no big deal at all. There
are plenty pf things I could not imagine in the past that I can easily imagine
now.

> But, imagination and reality are two entirely different things.

Of course! But the reality starts with imagining it.
>

>I think you just said the same thing I have. There has always been some
>group of people who were enduring bad times, is equal to: there isn't a time
>in history in which we have not had to endure bitter times, isn't it?

Perhaps. My statement needs clarification: What I'm saying is that the bad
times can be mnade less bad, and the number of people suffering can be reduced.
Example: WW2 was a very bad time for much of the world. The years that followed
were better.

>> > I have to believe

Link provided in other post.

>However, I don't ask why, why, why. I really don't. Maybe that's a
>shortcoming of mine, I don't know.

Actually, you DO ask why, why, why. hat's evident from your statement

"I have to believe there is a reason, or a purpose, for that--or continue to
ask the
question why."

The thing is, you have found answers to the "why" question that satisfy you.
>
>> > There is an (Eastern?) philosophical statement that says for every
>> >action there is an equal and opposite reaction.
>>
>> That's basic physics. It's how rockets work.

>You emphasize my obscurely made point--that it takes two swings of the
>pen[d]ulum to complete a cycle.

Sure - if what is happening is truly cyclical.

Now consider a spiral. From one perspective, someone following a spiral appears
to be going around in a circle. From a different prospective, the same someone
appears to be moving from one point to another, in a sort of regularly
wandering way.

>> > I have not seen the movie "The Seven Samurai"; however I would have to

>>
>> It's easily provable. If there are no bandits, will the farmers stop
>> raising food? Of course not. If there are no farmers, the bandits will
>> starve.

>If there are no farmers, the farmers will starve, i.e., we would *all* be
>gone and it all becomes a moot point.

Not at all. The point is that food producers (farmers, hunters, gatherers,
whatever) have just been logically proven to be needed in all societies. If
they don't exist, everyone starves. But the same cannot be said for
bandits/thieves/robbers/terrorists. Societies CAN exist without those people -
in fact, societies are better without them.
>
>> Somebody has to produce in order for there to be something to steal.
>> The producers do not need the moochers and thieves, but the moochers
>> and thieves need the producers.

>I rather think we all need each other.

I disagree. We don't need bandits/thieves/robbers/terrorists at all.

>Mind you, I wouldn't thank a creep
>for being around; but I'd sure be asking myself why I happened to be around
>that creep or vice versa, and what it is that destiny has chosen for me to

>>
>> 150 years ago, in this very country, you could have gotten into a
>> serious "philosophical" argument that slavery was an economic
>> necessity. Millions of people accepted - no PROMOTED - the concept of
>> owning other innocent humans. Today we see slavery as fundamentally
>> immoral and illogical. The world is a better place without slavery.
>
>Yet, isn't the history of slavery a part of why we know it is wrong?

Nope. It's clear that slavery is morally wrong, based on simple logic:

Once the concept of property is accepted, it logically follows that involuntary
slavery can be considered a form of property theft. The "property" is the
enslaved person's body, life, and work. There is no need to enslave anyone in
order for that simple logic to be true, and clear to anyone who approaches the
subject with an open mind. And the stolen property argument is only one of many
logical proofs of the absolute wrongness of slavery.

>And, some even still need to learn that lesson.
>
Sure - but far fewer than 150 years ago. That's progress.

>> > > If you want to talk philosophy, tell us what the producers of the

I think right here is the crux of the difference in our philosophies.

I don't think "destiny has chosen for me". I feel that I make choices, and that those choices result in consequences (good, bad, or indifferent). This makes ME responsible for what happens to me, and accepting this responsibility hopefully lead me to learn to make wise choices. But in my model of the world, there is no "overseer" called destiny planning lessons for me to learn.

True enough, but there is the money we need and desire, and
there is the real need for a rounded education. There are way too many
MBA's who would sell their parents if they thought they could make a
few bucks, and techno-geeks who fume at having to take those
unnecessary English, art, and phys-ed calsses that have "no bearing"
on their field. Part of the problems we have now is the monolithinc
thinking brought about by only looking at things from that
perspective.

Yup, vouchers are stealth welfare. I'm amused how the "pay as
you go crowd" stumbles on this one. Ya want's a private school, you
should pay as you go to it.

True, and I agree. I don't believe destiny is a predetermined set of
pathways that are presented during a lifetime. I do believe that destiny
is, for lack of better interpretation, much like nature: it's there for us
to learn from. I think destiny weaves in and out of our lives *BASED UPON*
the choices we make for ourselves--not that destiny predetermines what
choices we make. Destiny, to me, is the IF-THEN-ELSE statement in life...
:)

I didn't insist anything of the kind. I asked you why you have not
attempted to meet the qualifications. Do try and get these things
right.

> He is no "chief," merely an elder who has been puffing on
> his own unpeaceful pipe too long, counting coup in his mind.

"Unpeaceful pipe"? Naw, I'm not a chief but I'm a member of the tribe.
I don't sit outside the circle of the council fire grousing 'cuz I'm
excluded.

> The "reservation" is relatively small considering the big,
> wide world of radio surrounding it where the overwhelming
> majority of humans (of many "nations") live.

I'm not concerned about the "big, wide world of radio".

Irrelevant? That's absurd. My comment was a direct response to your
post.
Elitism seems to be anything of which you are not a qualified
participant.
Get used to it or get on board.

> All of the laws and regulations regarding amateur radio are as
> open to commentary and change inducement as every other
> radio service in the USA...yet you attempt some form of control
> and censorship (however slight) by intimidation that "one must
> be already in to talk about getting in" or the elitist "no citizen
> has any right to talk about something they are not in."

It is becoming quite monotonous re-explaining periodically that you have
had input to the FCC and you have input here. It is just that no one is
forced to give credence to your views. Further, no one is required to
venerate you for your "professional" activity in radio or for your
military service performed long ago.

[For additional historical material, see:
http://www.home.earthlink.net/~k8mn/Tokyo_53a.wav]

> >I'll bet you say that to all those who are permitted to do something

And? Everything is stupid and unnecessary to those who aren't
able to meet the qualifications.

> Heil wishes to create the artificial environment where only those
> who met PAST "qualifications" are "authorized" to remark on the
> laws and regulations of the PRESENT and the FUTURE.

You've remarked, "Anderson".

> That's an
> artificiality based largely on his self-defined "qualifications." The
> FCC grants amateur licenses as part of its regulatory task.

The qualifications for obtaining an amateur radio license are not
self-defined, Len. They're published. You've not met any of them.

> FCC amateur license grants are NOT an academic certificate
> that "qualifies" any licensee as any sort of knowledgeable radio
> operator or radio station controller. It is merely a grant of
> permission to operate only in certain allocated frequency bands,
> using certain allocated transmission modes and modulations.
> That grant does not come close to the possible frequencies,
> modes, or modulations available to the rest of the radio world.

Then again, radio amateurs are not pursuing the frequencies, modes or
modulcations available to the rest of the radio world. They obtain
licenses to access the frequencies, modes and modulations open to them.
Do try to keep up.

> >My little inner circle consists of 600,000+ in the U.S.
>
> Heil imagines himself of some importance in an "inner circle."
> There are approximately 300 million citizens of the USA and
> the FCC regulates ALL US civil radio for ALL the citizens. All
> the rest of the USA radio services way outnumber the radio
> amateurs in quantity...

C'mon, Len. Try and keep up. You have no idea what I imagine myself nor
have I stated membership in any inner circle. I'm a licensed radio
amateur. That is something which has been available to you for you
decades. That you have not become licensed has nothing to do with me.
Blame yourself.

> and most often in quality

and this information can be found where?

Anderson is not qualified to disqualify Heil.

Are you ever going to get the CW order wire story correct?

> >> Burke was right.
>

Amateur Radio Newsline™ Report 1322 – December 13, 2002

Amateur Radio Newsline report number 1322 with a release date of Friday, December 13, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio responds as a winter blizzard sweeps the Carolinas and the FCC asks a V-E team to explain. Find out what on Amateur Radio Newsline report number 1322 coming your way right now.

(Billboard Cart Here)

**
RESCUE RADIO: HAMS RESPOND TO CAROLINA BLIZZARD

Weathecasters described it as a clash of titans. A large cold mass of air from the North collided with a warm wet airmass from the Gulf of Mexico. The result was blizzard-like conditions in many areas of the Mid-West and along the Eastern Seaboard.

It all happened late Wednesday December 4th and all day on Thursday December 5 th. Hardest hit was North Carolina. Gary Pearce, KN4AQ, lived through the storm in Raleigh and has this first hand report:

--

The storm began moving across North Carolina as snow and sleet on Wednesday afternoon, and turned to ice overnight. With temperatures hovering just below freezing, a half-inch or more of ice coated trees and power lines. Power failed to several million homes across a wide belt in the center of the state. Telephone service had fewer outright failures, but both wired and cellular service was sluggish due to the high volume of calls.

The amateur radio story began Wednesday afternoon, as SKYWARN spotters tracked the storm for the National Weather Service. As night fell and power failed, the Red Cross and county emergency management's began opening shelters to give people a warm place to stay. Amateurs in several dozen counties staffed EOCs, shelters and Red Cross offices to assure continued communications. There was no statewide communications emergency, but ARES operators kept watch on the statewide ARES HF nets, and the state EOC in Raleigh remained on the air.

On Friday, with millions of people heading into the second night without power out and temperatures predicted to dip to 18 degrees, North Carolina Governor Mike Easley declared a state of emergency and decided to send the National Guard out to do house-to-house canvassing in 22 counties, to make sure people without phones, radio and TV knew there were shelters available.

The communications plan for the Guard units was to use cell phones to call into the State EOC and make their reports. North Carolina Emergency Management asked if Amateur Radio could provide a backup if the cell phones didn't come through. But, they couldn't pin down when or where amateurs might be needed.

John Guerriero, KG4HDT, the Emergency Coordinator assigned to cover the State EOC, arranged for the Tarheel net -- NC's statewide ARES -- Net to operate all day Saturday. He announced on Friday's nets that operators may be needed at any time in the 22 counties covered. He was especially interested in hams with HF mobile capability.

Operators from many of the affected counties maintained watch Saturday, and Guerriero demonstrated the HF and VHF Amateur Radio operation to the National Guard coordinator at the EOC. Ultimately, however, the hams received no requests for Amateur Radio communication.

One county did work directly with the Guard. In Alamance County, ARES operators who already on duty providing communications between the EOC, the Red Cross and shelters offered to accompany the Guard, but were told that civilians could not ride in military vehicles. Instead, the county provided VHF radios left over from a recent move to 800 MHz, and the Amateurs at the EOC acted as dispatchers. Alamance County EC Dwayne Ayers, N4MIO, reported that this arrangement wasn't nearly as good as the coverage the hams could have provided, but it was all the Guard would accept.

ARES operation in some counties continued through Monday, though with much power restored and shelters closing, most Amateur Radio activity secured by Tuesday.

For the Amateur Radio Newsline, this is Gary Pearce KN4AQ in Raleigh, North Carolina.

--

As we go to air almost everyone in North Carolina have had their power restored. And the hams of North Carolina are standing by -- just in case Mother Nature has more winter storms up her sleeve. (KN4AQ, ARNewsline(tm))

HAM RAIO IN SPACE: ARISS MEETS IN WASHINGTON

It may have been snowing outside, but that did not stop ham radio delegations from descending on the Washinton D-C area for the Winter 2002 meeting to plan the future of ARISS and manned ham radio on board the International Space Station. Roy Neal, K6DUE, was there and filed back this report:

--

THE DELEGATES AND REPRESENTATIVES OF ARISS…AMATEUR RADIO ON THE INTERNATIONAL SPACE STATION... MET AT THE GODDARD SPACE FLIGHT CENTER, NEAR THE NATION’S CAPITOL.THEY DECIDED THAT 2 THOUSAND AND TWO WAS A GOOD YEAR FOR THE SPACE STATION. IT GREW RAPIDLY AND IS WORKING WELL. THE SAME IS TRUE OF ARISS.

THERE WERE MANY EXCELLENT CONTACTS WITH SCHOOLS ALL OVER THE WORLD, INCLUDING EUROPE, SOUTH AFRICA AND JAPAN. GROUND STATIONS IN SOUTH AFRICA, AUSTRALIA AND HAWAII WORKED VERY WELL IN MAKING THOSE CONTACTS .

PACKET HAS BEEN BROUGHT ON LINE AND SEVERAL THOUSAND VERY SATISFIED USERS ARE MAKING THE MOST OF IT.

FOUR EXTERNAL ANTENNAS WERE INSTALLED LAST YEAR. A MONUMENTAL ACHIEVEMENT THAT GAVE ARISS THE CAPABILITY OF OPERATING ALMOST ANY FREQUENCY FROM 20 METERS UP INTO THE GIGAHERTZ RANGE.

AMONG ITS PROBLEMS, THE SPACE STATION HAS A CREW OF ONLY THREE ASTRONAUTS AND COSMONAUTS., INSTEAD OF SEVEN AS ORIGINALLY PLANNED. THAT SEVERELY LIMITS OPERATING TIME FOR AMATEUR RADIO. THE ARISS DELEGATES WERE TOLD THAT THE INTERNATIONAL PARTNERS HOPE TO INCREASE CREW SIZE IN THE NEAR FUTURE. HOPEFULLY A LOT MORE AIR TIME WILL BE AVAILABLE.

HAM RADIO ON THE SPACE STATION PLANS FOR THE NEXT PHASE CALL FOR EXPANSION TO 70 CENTIMETER OPERATION AND A SECOND STATION ON THE AIR. THIS WOULD OPEN THE DOOR TO FULL DUPLEX OPERATION. AT A FUTURE DATE IT MIGHT EVEN ALLOW STUDENTS TO RECEIVE PICTURES ON 70 CM WHILE TALKING ON 2 METERS!

WORK WILL CONTINUE, TESTING SLOW SCAN TELEVISION AND SPACE CAM HARDWARE, HOPEFUL OF GETTING BOTH THESE PROJECTS ON THE AIR PERHAPS BY THIS TIME NEXT YEAR.

MANY OTHER EXCITING, ADVANCED TECHNOLOGY PROJECTS WERE DISCUSSED. THEY WILL BE REPORTED HERE ON NEWSLINE DURING THE COMING YEAR AS THE ARISS TEAM CONTINUES BUILDING ITS HAM RADIO STATION IN ORBIT.

ROY NEAL, K6DUE, FOR AMATEUR RADIO NEWSLINE

--

Thanks Roy. (K6DUEE, ARNewsline(tm))

**

HAM RADIO IN SPACE: RS-20 IN ORBIT

Russia has a new ham satellite in space. Well, kind of.
According to the AMSAT News Service, the new ham radio bird is actually an Amateur Radio telemetry beacon operating as a secondary payload of a new Russian navigational and scientific satellite. It was launched on November 28th, is at an altitude of 720 kilometers and circles the Earth every 99 minutes. Its beacons can be heard transmitting telemetary on 145.828 and 435.319 MHz. The new satellite has been officially named RS-20. (AMSAT NA)

**

SPECTRUM ISSUES: 40 METER REALLIGNMENT DISCUSSED
The just-ended preparatory meeting for next years World Radiocommunication Conference heard five ways to fix the problems plaguing 40 meter. It also heard a sixth presentatoion that would essentially leave things as they are.

Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--
Without going into minute detail, the five concepts differ markedly from one anotgher. League Executive Vice President Dave Sumner, K1ZZ, says in the ARRL Letter that all five options do represent improvements for Amateurs operatng in the 40 meter band, although two fall short of fulfilling the 300-kHz worldwide requirement.

The International Amateur Radio Union is on record as supporting a 300-kHz worldwide amateur allocation in the vicinity of 7 MHz. Sumner says that achieving this will require the fixed and mobile services to make room for broadcasters and for the broadcasters to change their operating frequencies.

The five proposed methods for change include a variety of transition schedules to ease the impact on these other services. Even with this Dave Sumner says that there is no guarantee that proposals will be limited to the six methods described in the report.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

More on this story is on the web at www.arrl.org (ARRL)

**

Break 1

From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the W4VRB repeater serving warm Vero Beach Florida.

**

ENFORCEMENT: VE'S ASKED TO ANSWER STRANGE PASSING GRADE

The FCC's Enforcement Bureau has begun an audit an ARRL VEC sponsored test session held in Pelham Georgia on June 10th 2000. Letters have been sent to the three V-E's who supervised the test. They ask some key questions:

--
Duckworth" “The bureau seeks information as to how a candidate who has seriously failed seven tests passed the Pelham test with a perfect score on Element 2 and only one wrong answer on Element 3.”

--

The reason for the suspicion? Again the FCC's Daryl Duckworth, NN0W:

--
Duckworth: “The candidate got a license but was recalled for testing. He did not appear and his license was canceled.”

--

The three V-E's were given an appropriate amount of time to respond. In the meantime the FCC has also recommended to the ARRL VEC that it not not accept their services while the matter is under review. (FCC, RAIN)

**

ENFORCEMENT: FCC SUGGESTS THAT FIVE VE'S ARE OUT

Meantime, the FCC has closed the books on its audit of a pair of ARRL sponsored ham radio exams in Cookville Tennessee. The sessions were held back on December 14th 1999 and March 11th, 2000. And as the FCC's Daryl Duckworth, NN0W, tells us, the Enforcement Bureau has recommended that five Volunteer Examiners not be used again:

--
Duckworth: “It recommended that the services of five V-E's be no longer accepted because they knew or should have known that one of the test candidates was related to a V-E. Also, the location of one of the test sessions was not revealed in the documentation sent to the ARRL.”
--

A final decision on the future of the five V-E's is now in the hands of the ARRL VEC. (FCC, RAIN)

**

HAM RADIO TESTING: NEW TECHNICIAN CLASS QUESTIONS NOW AVAILABLE

Scotty Neustadter, W4WW, says that the new question pool for Technician class exams is out. Neustadter heads the Question Pool Committee of the National Conference of Volunteer Examiner Coordinators. And, in an e-mail, W4WW says that the committee has released a revised and expanded Amateur Technician class question pool into the public domain.

The new question pool becomes effective July 1, 2003. It must be used for all Technician written examinations given on or after that date. The complete set of questions can be downloaded in text or Portable Document File format from www.arrl.org/arrlvec/pools.html. You will need a free Adobe Acrobat reader program to view and print the P-D-F version. It can be downloaded at www.adobe.com. (W4WW)

**

ENFORCEMENT: FCC EXPECTED TO OK MITNICK RENEWAL

The FCC is expected to approve the license renewal of former computer hacker Kevin Mitnick, N6NHG, if it has not done so already. The W5YI Report says that an Administrative Law Judge says that Mitnick has paid his debt to society and has been adaquitey rehabilitated to where he now holds the requisite character requirements to continue as an FCC license holder.

In rendering his decision the Judge added that Mitnick has been using his radio gear since his release from prison and it is significant that there have been no complaints filed regarding his radio operations. Also, that Mitnick's post

prison conduct demonstrates that his rehabilitation can be relied upon to deal honestly with the Commission and to comply with all rules and regulations.

Mitnick's ham radio license renewal had been on hold based on his conviction for computer hacking which the FCC alluded brought with it questions regarding his fitness to remain a Commission licensee. (W5YI, ARNewsline(tm))

**

ENFORCEMENT: FCC RE-LICENSES HERB SCHOENBOHM

The former KV4FZ is back on the air but not under that call sign. Herb Schoenbohm who used tohold that call sign showed up on the air during last weekends 160 metrer D-X contest sporting the call NP2MJ.

FCC records show that Schoenbohm’s new call was issued to him on December 7th. The action to grant a new ham license comes about two months after an FCC Administrative Law Judge ruled that he now holds the requisite requirements to again become a Commission license holder.

Two years ago Schoenohm was forced off the air after the FCC refused to renew his ham ticket based on an earlier fraud conviction and the U.S. Supreme Court refused to hear his license renewal appeal. Its not known if Schoenbohm will apply for his old KV4FZ call under the vanity progam -- or -- if the FCC would grant such a request. (Numerous listener reports)

**

ENFORCEMENT: VK CB'ERS IN TROUBLE

Still with enforcement news, word from down-under that a pair of Australian C-B operators are in trouble with communications regulators. VK7HG-O reports that the two U-H-F C-B operators have been charged with breaches Australia's Radiocommunications Act for operating where they were not supposed to be.

On November 22nd, the two C-Bers were talking on the input channel to an emergency repeater. They refused to relinquish the frequency and would not move away. They were tracked from the town of Reinna to Richmond and back to Honbart by a ham radio direction finding team and the Australian Communications Authority. The regulatory agancy has already spoken with the two V-K Citizens Radio operators and is reportedly considering further action. (Q-News)

**

RADIO POLITICS: HAM ELECTED MAYOR OF CALIFORNIA CITY

The New Mayor of Agoura Hills California is a ham. Jeff Reinhardt, AA6JR was sworn in as the city's new leader on December 3rd. He says his theme for 2003 is “The Year of Discovery.”

Reinhardt, a public relations specialist, is best known nationally as he author of his “Magic in the Sky” column at appears regularly in C-Q Magazine. He will be starting a new quarterly column on mobiling also for C-Q.

Among those attending the swearing-in ceremony were Reinhardt's wife Melissa KD6BIT, daughter Jessica KD6ARA and son Steven K6SJR. Also present were Jim Fortney K6IYK, Doug Wynn WY6NN and a number of other local Southern California hams.

2003 marks the 20th year of cityhood for Agoura Hills but only the first time a licensed radio amateur has sat in the Mayor's seat. (WY6NN)

**

CONFERENCES: THE SOUTHEASTERN VHF SOCIETY

Turning to conventions and hamfests, a first call is out for papers to be presented at the 2003 Southeastern VHF Society Conference. This gathering is slated for Huntsville, Alabama, on April 25 and 26. The deadline for submitting papers to Dick Hanson, K5AND, is March 11. Dick's e-mail address is k5and@adelphia.net. Contact him directly with any questions. (VHF Reflector)

**

HAM RADIO MEMORIBILIA: COLLINS REPRODUCTIONS AVAILABLE ON-LINE

Collins reproduction items, including a new antenna switch unit are now being marketed by the Collins Radio Association. This, through its Collins Radio Center location, near Johnstown, Pennsylvania. Items can be picked up in person at the center or shipped via U-P-S. More information on what's available is in cyberspace at www.collinsra.com. (Press release)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RADIO LAW: NEW STUDY SAYS MOBILE PHONES CAUSE ACCIDENTS

Researchers say increased cell phone use has led to more crashes caused by drivers on the phone. According to a December 2nd news report, researchers at Harvard's Center for Risk Analysis, drawing on previous research involving cell phones and government figures for auto accidents, say there is a growing public health risk from the reliance on cell phones in cars.

Data on the number of crashes caused by cell phones is incomplete but it suggested that drivers talking on their phones are responsible for about 6 percent of U.S. auto accidents each year. Translated into a human toll it means that an estimated 2,600 people are killed and another 330,000 are injured.

Researchers say that the figure was reached using current cell phone usage estimates to update a 1997 study. That study looked at phone records of Canadian drivers involved in crashes to see if they were making calls at the time.

The number of cell phone subscribers has grown from 94 million in 2000 to more than 128 million today. Opponents of banning mobile phone usage by drivers say that the benefit of car calls outweigh the possible dangers that they may pose. (Published reports)

**

EMERGING TECHNOLOGY: EMERGENCY RADIO CAN INTERFERE WITH PACEMAKERS

If you wear a pacemaker or know someone who does, listen up. A new emergency radio system could affect you. Q-News Graham Kemp, VK4BB, has the details:

--
United Kingdom and setting the pace –makers: New Scientist 23 November carry an article warning that TETRA, the two-way radio system being adopted by many of the worlds emergency services can interfere with the operation of medical devices like heart-pacemakers.

TETRA operates at 400 megs and uses pulse-rates of 17.6 Hz. Rex VK4LR suggests that anyone playing with PCM at VHF or even HF should be very careful in case someone nearby suddenly has unanticipated ticker problems!
--

The TETRA system is a European developed standard that being adopted by emergency services in 50 countries. In addition to Europe, TETRA radios are in Africa, Asia and Latin America. Great Britains' Devices Agency found that TETRA radios can upset heart pacemakers, confuse defibrillators, and stop ventilators from working. (Q-News)

**

INTRUDER WATCH: AIR ACTS ON INTERFERENCE TO 10 MHZ

A shortwave broadcaster has acted to eliminate interference to a ham band. Following a report that All India Radio was radiating spurious signals from it's 9.950 Mhz channel the broadcaster has taken the offending transmitter off the air.

All India Radio's Deputy Director said that the company decided to suspend the transmission on November 21st to investigate the cause of spurious emissions. The unwanted spurs were being heard in 50 kHz increments and included 10.1 and 10.150 MHz . (Q-News)

**

INTERNATIONAL - KENYA: NEW US-KENYA RECIP AGREEMENT
According to ZS6AKV, Kenya has new reciprocal licensing agreement between it and the United States. Under it, U-S citizens with F-C-C issued licenses may apply for and be granted Kenyan licenses.
ZS6AKV notes that it has taken the IARU close to ten years to achieve this

agreement. The application form to operate in Kenya can be downloaded a www.cck.go.ke. (SARL)
**
INTERNATIONAL – UK: NEW UK-THAILAND RECIP AGREEMENT

The United Kingdom's Radiocommunications Agency has signed a reciprocal licensing agreement with Thailand. Visitors to Thailand may apply for a Thai license with an H-S-Zero prefix and long-term residents of Thailand receive a full Thai callsign. (RSGB)

**

DX

In D-X, HG4I reports that he will be on from Hungary between the 20th of December and 12th January with the special event call sign H-G-Zero 3-H-N-Y. This call celebrates the new year with the numerals Zero 3 representing 2003 and the H-N-Y suffix is abbreviation of phrase Happy New Year. Look for him on all of the H-F bands running CW, RTTY, BPSK, SSB, and FM on 29 MHz.. QSL directly with a self addressed stamped envelope to HG4I at the call book address. (HG4I)

**

THAT FINAL ITEM: THE PAPER SAID WHAT?

And finally this week, an update to a simple story that has now taken a rather bizarre twist. As in -- a reporter made part of it up and nobody caught it. Fred Vobbe, W8HDU, is back with the rest of the story:

--
Last week we at Amateur Radio Newsline brought you an item about a call by the Partnership for Public Warning to create a national wireless emergency alert system. One that could send warnings to citizens via their pagers, mobile phones or computer screens.

It sounds like a good idea, only thats not what P-P-W had in mind when it released a report based on a workshop that the group conducted last June.

You see, one of the worlds largest news services picked up the story and put it out on the wires. Several news organizations including many newspapers picked up wire service story and ran their own versions of it. We were sent a number of copies by our own listeners that appeared in their local papers. And who ever questions a newspaper article? Well in this case we all should have.

Richard Rudman, W6TIA, is a Director of the Partnership for Public Warning. He ways that when his organization learned of the story its Press Relations Director contacted the news agency. Rudman says they admitted to P-P-W that their reporter made up the lead sentence about using pagers to contact the public. And as a result, the news agency actually issued a very rare retraction, but many news organizations that ran the original story did not pick up the corrected release.

For the record, Rudman says that the Partnership for Public Warning does not endorse any one vendor or technology over another. Its goal is to promote what it terms as a level playing field. One where all warning marketplace players can be more certain of rules and standards. This says W6TIA will permit them to develop on a level playing field which does not now exist. It will also promote development of common warning terminology to better serve the publics need.

For the Amateur Radio Newsline, I'm Fred Vobbe, W8HDU.

--

That full report of last June's P-P-W workshop was released on November 25th. You can read it on-line at www.ppw.us.org. (PPW via W6TIA, W6VR)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go this note. We have been advised that last weeks story on the Canals of Venus credited to Q-News actually originated in Bob Gonsett's CGC Communicator. There was no credit line in the Q-News audio report and we thought it was theirs. Turns out it was actually written by Bob Gonsett, W6VR.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Mert Garlick, N6AWE, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

>their teeth on BC-610's and kept fleets
>of ART-13's in (and on) the air. I don't
>think AM was quite the mystery it had
>been before the war.

I don't think AM was any sort of mystery for hams in the '30s. Or even the '20s. Main problem was the high cost of a transmitter and the large amount of spectrum it took up, compared to CW.

> And then there
>was that windfall of surplus command
>sets that made quite acceptable AM
>right out of the box from Fair Radio.

Not really. Most popular surplus transmitters were TVI generators of the worst sort unless modified heavily. And almost all of them (BC-610 is a rare exception) needed a power supply, and reworking of the control circuits. That's why they were so inexpensive.

>K7JEB:
>>> It was at least technically possible to
>>> expand the privileges. And ham radio had
>>> shown itself to be a "Good Thing" during
>>> WWII and so, perhaps, deserving of government-
>>> policy encouragement and growth.
>

>1952, it seemed like Big One #3 was just
>around the corner with the Russkies and
>the Red Chinese. Definitely going to
>need a lot of radio ops for a land war
>in Asia.

Maybe. More likely, the need was seen as a need for more CD/RACES ops (RACES appeared right around that time), more mobile units, and more hams using SSB.

>N2EY:
>> I think the biggest driving force behind
>> the FCC's sudden change of heart was
>> the desire to get hams using and working
>> on SSB. The original 1951 restructuring
>> would have reduced the flow of new hams to
>> HF 'phone, because it would have required
>> post-Jan 1 1953 hams to get Extras in order
>> to use HF phone on the bands between 2 and
>> 25 MHz. Less crowding, fewer 'phone hams,
>> less need for SSB and fewer hams working on it.
>
>> Open up those bands to Generals and

>> to push SSB use by hams.
>
>That's a very interesting idea. That *was* the
>ultimate effect of over-populating the 'phone
>bands with DSB-AM - encouraging the transition
>to SSB.

There's also the 10 meter TVI issue.

>To be honest, though, it strains my
>credulity to think that the FCC could be *that*
>forward-looking (and that Machiavellian).

Why? We're talking about the FCC of 50 years ago, not the FCC of today or the past couple decades. The 1951 restructuring was done as a sort of social engineering exercise, with the following expected goals:

- Make it easier to get started in ham radio (Novice)
- Promote experimentation on VHF/UHF/microwaves (Technician)
- Increase operating and technical requirements of the full-privs license (replacement of Advanced by Extra)

Why wouldn't the FCC change its mind if the perception change, and try to move in a different direction?

>It
>seems much more straightforward to think that
>someone saw the regulations as overly restrictive
>and passed the word down. It was definitely
>a turnaround, though, and on short notice.

Maybe. Seems more likely that the SSB/TVI issues were driving it.
>
>N2EY:
>> So let's be proactive. Suppose S25.5 goes
>> away next year, and FCC decides to dump
>> Element 1. What else should FCC change
>> in the ham license structure?
>

>K7JEB:
>In my opinion, not a thing.

So even without a code test, Techs should be limited to tiny CW-only slices of 80/40/15, and SSB/CW on 10? We can do better than that!

>There are so
>many disincentives to getting into amateur
>radio right now that I honestly believe that
>the FCC could print ham tickets on Wheaties
>box tops and we still wouldn't see growth
>in either VHF or HF operation beyond what
>we are experiencing now.

I'm talking about privileges as well as test requirements.

> All operator
>licensing should do is make sure amateur
>radio operators don't interfere with the
>other users of the radio spectrum.
>
Including each other.

But I disagree that interference prevention is the only goal of licensing.

>Brownie Hawkeye 135mm Proper Bear shooter camera.

Oh, I KNOW we won't hear anything...at least until he has a chance to
wallow through Google to find SOMEthing that he can use as an excuse.

Of course anyone with any knowledge of present FCC licenses and grants
KNOWS that there is no such license that grants the breadth and freedom that an
Amatuer license grants, and no, THEY don't have to have an Amateur license to
kow that.

Pity the fool of Larnark Drive
Who rants and raves but takes a dive
That never could make himself understand
There was fun and friends waiting on the Amateur Bands

He bumbled his way through a career unfulfilled
Though taking credit for others he was suitably skilled
Too snobby and haughty was Lennie the Putz
To take an Amateur Exam and join the rest of us.

So now his days wane and his end draws near
And all he can do is listen on non-radiating old gear
As the radio world moves on without his consent
We're all please to "C-Q" while Lennie gets bent.

Good thing my career in Nursing is secure, eh...?!?!

I guess I had the same permission slips to take shots of the Bear in
international waters and airspace that the Bear had to take his shots
of me. Been awhile see so I forget if it was worked out by State or
the Pentagon. Maybe the Swiss . . ? Maybe Khrushev sed it was OK? I
dunno, had to be somebody 'way up there. I guess. Or just maybe nobody
gave a damn one way or another. Which of course is the real answer.

Usual Putz duck the point & try to divert maneuver. "Minor technical point". Yeah, it's a "minor technical point" Putz. Because anybody who knows diddly squat about photography knows that from long before the CVA 66 America was launched in 1965 until right now the PX135 series of Plus-X films have been ASA 125 films. Any time somebody points out another one of your screwups which expose your ignorance of the subjects you compulsively rattle on about at boring lengths are "minor technical points". What else could they be? PUTZ!

And by the way those antique bulk packs were junk 35mm movie film, not professional still camera film. Explains why I could get rivet-level resolutions and you couldn't. Putz.

The good news is that the more "expertise" you claim the deeper the hole you dig for yourself.

> due to finishing first-phase flight testing by NADC.

Uh-huh. Got it Putz. You were involved in the design work of all three phases. System design work obviously doesn't happen at test facilities. Understood. So the RCA hardware fell outta the design work and RCA shipped you to NADC to be an RCA rep for the SECANT job. The usual. Now kindly explain why you abrubtly departed NADC after the first phase and did not participate in the following two phases.

Don't try to bullshit us by coming off with anything like "the testing of the RF and IF sections was completed in the first phase". We know better than that Putz.

> At no time
> was my employment ever terminated at RCA until November
> 1975 and the entire R&D team disbanded along with most of
> the rest of the division.

I've been "disbanded" several time Putz, but never in the middle of a test series for hardware I designed or helped design. Come clean Putz, why weren't you at NADC for Phases 2 & 3?

> RADIO LAW: NEW STUDY SAYS MOBILE PHONES CAUSE ACCIDENTS
>
> Researchers say increased cell phone use has led to more crashes caused by
> drivers on the phone. According to a December 2nd news report,
researchers at
> Harvard's Center for Risk Analysis, drawing on previous research involving
cell
> phones and government figures for auto accidents, say there is a growing
public
> health risk from the reliance on cell phones in cars.

>
> Data on the number of crashes caused by cell phones is incomplete but it
> suggested that drivers talking on their phones are responsible for about 6
> percent of U.S. auto accidents each year. Translated into a human toll it
> means that an estimated 2,600 people are killed and another 330,000 are
> injured.
>
> Researchers say that the figure was reached using current cell phone
usage
> estimates to update a 1997 study. That study looked at phone records of
> Canadian drivers involved in crashes to see if they were making calls at
the
> time.
>
> The number of cell phone subscribers has grown from 94 million in 2000 to
more
> than 128 million today. Opponents of banning mobile phone usage by
drivers say
> that the benefit of car calls outweigh the possible dangers that they may
pose.

> > But, imagination and reality are two entirely different things.
>

True enough. It is also said that we can make our own reality. I think we do so all based upon prior experiences. One could not be set down in the middle of a cornfield and know that it's easier to walk with the rows rather than across the rows. It would be a short lesson in this case, but it would be learned from experience to walk with the row.

The experience of see corn sucked up and shot through a corn-chopper would show us that the same would *probably* happen to us. So, it would be the summation we learn from the experience of seeing the corn chopper in action that we would stay away from it.

Both of those realities had more to do with experience than imagination (other than the imagination of ourselves getting sucked up into one of those machines!!)

All true...but my perspective tells me that it would from prior experience
that we learn to make things less bad, learn to more quickly recognize evil
intent...etc.

> >
> >However, I don't ask why, why, why. I really don't. Maybe that's a

> Actually, you DO ask why, why, why. hat's evident from your statement
>
> "I have to believe there is a reason, or a purpose, for that--or continue
to
> ask the
> question why."
>

You're right about my statement, but see the beginning of that statement. I
believe there is a reason, or a purpose for everything, or I *would* ask
why. I don't ask why very often, Jim, I really don't. I accept and go on.
I *do*, however, believe that fate/destiny/nature/God--whatever--brings me
experiences to learn from and that it is something for me to learn from my
perspective and something for someone else to learn from *their*
perspective.

>
> The thing is, you have found answers to the "why" question that satisfy
you.
> >

Hmmmmm, yeah, I did used to ask why...when I was a kid. And, you're right,
I found the answer to the why when my belief system showed me the above (and
a whole lot more, of course). It's easier not to ask why than it is to just
accept. My questions are not going to change that it happened or may happen
again. But, my learning may help in a future scenario.

>
> >You emphasize my obscurely made point--that it takes two swings of the

>

Same with a cycle. You are either nearing the beginning, center, or end of
a cycle and the decision would all be made from perspective.

>

people -
> in fact, societies are better without them.
> >

I'd like to believe that. But I am not convinced. A baby needs to fall to
know that they need not do that again. Unless we are predisposed to
something, and I don't think we are, then we need a little of everything to
be formative about who and what we are and how we "like" our world.

> >>
> >> Somebody has to produce in order for there to be something to steal.

>

OK. We may not *need* them, but they are here for a purpose. Otherwise,
they would not be here.

> >
> >> > We've never had a world without challenge.
>
> >> Doesn't mean progress is impossible.
> >>

Or setback.

> >
> >Yet, isn't the history of slavery a part of why we know it is wrong?
>
> Nope. It's clear that slavery is morally wrong, based on simple logic:
>
> Once the concept of property is accepted, it logically follows that

involuntary
> slavery can be considered a form of property theft. The "property" is the
> enslaved person's body, life, and work.
>

It is for the reason that you understand that principle that you disagree with slavery. It is for the reason that principle is *not* understood that there are those who think we should still be there. It is up to us, who know and understand, to try to convince those who do not. That is the premise destiny hands to us--to provide for a testing ground for our own belief system (how much do we really believe and defend it) and to try and make it better by changing the minds of those who don't see. Destiny or fate doesn't *put* us in that situation...we determine whether we got there or not. But, once there, there are all kinds of ways for us to challenge ourselves to more and stronger committment and to challenge others to the same committment.

>
> There is no need to enslave anyone in
> order for that simple logic to be true, and clear to anyone who approaches
the
> subject with an open mind.
>

Well, in the logical argument phase, you just shot your argument in the foot. Note the last two words, "open mind." There are those who aren't even close to having an open mind. Why? Because their belief system (their principles, etc.) haven't been challenged. If I am to believe that I am not just simply here to live life, then I believe there is a purpose for everything. If I tell myself that I am committed and strong in opposition to treating other people like possesions, then isn't a natural part of that affirmation process, a challenge to it--to be learned from? Perhaps I don't believe in a Heaven or Hell--in the vernacular--...but I do believe there is more than "this." And, I do believe that "each lifetime" (each realized experience) gets us closer to whatever is supposed to be that "perfect world." (Nirvana, Heaven, etc.) Whether that is a continuation of life again, but better and better each time, or a spot in Heaven doesn't matter. We all work toward a common goal.

>
> >And, some even still need to learn that lesson.
> >
> Sure - but far fewer than 150 years ago. That's progress.
>

You choose to believe that is because of "just knowing" it is wrong. I choose to believe it is because our forefathers were handed examples of its being wrong to begin a process by which we have arrived, historically, today--*knowing* it is wrong because of the strife and horrid conditions under which people live/d in those days.

> >> > > [Jim said]:
> >> > > If you want to talk philosophy, tell us what the producers of the
> >> > > world gain from the moochers and destroyers.
>
> >> > We, at the least, gain knowing that we don't want to be like them,
think
> >> > like them, act like them. They, at the least, offer an example of
what
> >> > can happen if we do.
>
> >> Doesn't mean we "need" them. We don't need to have people jumping off
> >> of bridges and falling to their deaths to know it's a bad idea.
>

What *IF* we'd never seen what happens when someone does that? What *IF* we were told that we could float to the bottom, unharmed? What is it that tells us we shouldn't do it? Is it having seen the prior experiences of other things or people falling from heights, or is it because we "just know" it would be wrong?

> >
> >We don't?
>
> Well, I don't. Most rational people I have encountered don't, either. Just
> imagining is enough for most of us.
>
> 73 de Jim, N2EY
>

I believe I am quite rational and I believe you are. I believe you have a different way of seeing things than I do. I believe it is up to both of us to allow each other the dignity of our own beliefs, rather than expecting each other to think in the same manner. And, it seems rather condescending to go through such a good exchange of ideas then end a post with that, Jim. I don't belie you your principles, beliefs, premises. It seems you made a judgement about mine (going back to another thread/discussion--*that* is what I call judgement).

Greetings,
I am preparing for an extended trip around the US with my family.
I have a 2 channel iCom 5 Watt radio that I can take with me.

I would like one chanel progrmmed to a weather band and the other
prgrammed for use to contact Police/Fire/EMS in case of life threatening
emergency.

Are there established nationwide frequncies I can have this unit
programmed for the presribed purpose?

Thank you for your time.

what kind of radio? i assume from your questions below that it is probably
a vhf high band type.

>
> I would like one chanel progrmmed to a weather band and the other
> prgrammed for use to contact Police/Fire/EMS in case of life threatening
> emergency.
>
> Are there established nationwide frequncies I can have this unit
> programmed for the presribed purpose?

there are at least 4 and i think a few more frequencies in the 162mhz band
that are used by nws broadcasts. they are spread geographically so they
don't interfere with each other. if you want to monitor those pick up a
radio at radio shack that includes alert features.

i know of no nationwide access frequency for police/fire/ems. there are a
variety of frequencies from 30mhz up through 900mhz and probably some higher
now that are used by those services. which ones are used are determined
locally by geographic considerations, licensing, and in many cases budgets.
it is hard enough to make sure that adjacent areas can talk to each other
without coordinating a nationwide system. as far as allowing the general
public to have direct access to those frequencies you won't find that
anywhere, any non authorized use on those public service frequencies is
subject to heavy fines and jail time.

your best bet is a cell phone if you are on major highways or near cities.
beyond that get a satellite phone or subscribe to on-star if you are really
worried about getting out of touch.

K1MAN EDITORIAL - ED021215

THE HIDDEN AGENDA OF RILEY HOLLINGSWORTH, K4ZDH

The United States Attorney can indict you AT ANY TIME within the seven year statute of limitations for a felony committed as charged and documented by a Felony Complaint Affidavit, and then he can prosecute you in federal court. He must prove to the jury, beyond a reasonable doubt that: 1) You did interfere with a K1MAN bulletin and 2) that it was your INTENT to interfere with a K1MAN bulletin. Your first witness, FCC Special Counsel Riley Hollingsworth, K4ZDH, will be of little help when he admits that he encouraged you to commit the felony, since this is ALSO a felony under Sections 333 and 501 of the 1934 Communications act. You can read these statutes at www.K1MAN.com. Scroll to the bottom and click on "Legality of K1MAN Bulletins."

Ask yourself why? Why does Hollingsworth encourage the scum of 14.313 to talk over K1MAN bulletins? In addition to being a felony, this is also against all notions of good amateur practice isn't it? Is He a Moron? Perhaps Riley Hollingsworth was sick on the day they taught law at law school, hi. What is REALLY going on here?

The answer is quite simple. FCC Special Counsel Riley Hollingsworth, K4ZDH, has a hidden agenda. The immediate effect of his open advice to talk over K1MAN bulletins to the scum of 14.313 is significantly increased bad radio amateur behavior on 20 meters, in front of the whole world. Riley is steadily building up a huge file of amateur radio bad behavior. When he retires from the FCC to face huge college tuition payments for his grand children, he will take this huge amateur radio bad behavior file to the large Washington communications law firm of "Do We Cheat Em and How." "Do We Cheat Em," of course, specializes in delivering valuable amateur radio spectrum (and our collective amateur radio heads) to the wealthy commercial interests on a silver platter. Don't be duped by this corrupt and cheap politician, Riley Hollingsworth, K4ZDH.

Beware, my fellow Radio Amateurs, Riley Hollingsworth is a wolf in Sheep's clothing. If you are one of those who thinks it's cool to talk over K1MAN bulletins, think again. You are playing into the hands of Rot Riley the Ripper. He wants your spectrum. Don't be a fool and let him continue to insult your intelligence. Just say no to Amateur Radio Ignorance. 73 and good luck, de K1MAN.

There is a lot less to K1MAN than meets the eye!

Amateur-to-amateur radio interference, whether deliberate, accidental, or incidental, doesn't even rise to the level of misdemeanor (let alone a FELONY). At best, it a family squabble.

K1MAN (as usual) is pandering to the ignorant in hopes of impressing them and developing a following of groupies who will then pay $299.00 for a certificate signed by a "Registered Professional Engineer", or maybe apply for one of Baxter's affinity credit cards, or (insert whatever money-grubbing deal he's currently running which strikes your fancy).

Sunuvagun!

With all kind wishes,

de Hans, K0HB

I am a little baffled. W1AW has CW and RTTY and SSB buliitens and starts up WITHOUT ever asking if the frequency is in use! I hear NOONE in this newsgroup complain about W1AW or an organized effort to QRM W1AW.

If you look at the K1MAN website - www.k1man.com You will find a statement by Robert H Mc Namara - They fall within the SAME category as W1AW!

The same rules have to applied to both partys. When when did we get wishy-washy and live a life of double standards? I think Bill Clinton taught us that, very well indeed. Mr. Hollingsworth must take his tactics from Clinton. Heck he was appointed under Clinton!

Same old Glenn...delusional and full of himself as always. What have you been smoking, Glenn? Getting a tad bit paranoid, are you?
No, Glenn. Riley is not a threat to Ham Radio but goons such as yourself are. You, Glenn, are irresponsible and selfish. You purposely jam ongoing conversations of others with what you consider to be a "broadcast" of some worth.
Here's hoping you lose your Ham ticket in the very near future and your insipid "bulletin service" goes down the toilet where it so richly belongs.

>GROL.

All GROLs issued or renewed after 1984 were lifetime licenses. In
1985, all outstanding GROLs with an expiration date were replaced
with a lifetime license and became non-renewable after the one year
trade-in period.

The only way that one "drops" a GROL under that scheme would have been
to not renew a license expiring between 1984 and 1985 or to not have
traded the license expiring after 1984 for a lifetime license in 1985.

Or to mail it back to the Commission saying "here. take it back, I
don't want it". Few, if any, people have taken the latter route.

Me too. Me too.

Worse, while finishing my PhD in Math, I taught the teachers. Most of them certainly were dumb. We administered a test which Elementary Ed majors need to pass before getting their teaching certificate. I've been through the test: a bright 6th grader should have no problem with it. It was typical to pass the test on the 4th or 5th try. The teaching students generally described it as "unbelievably hard".

Note, though, that if we suddenly decided to triple teacher pay, we would have a serious problem: the dumb teachers would not be fired; instead they would get triple pay for the same poor job. I'd favor raising their salaries way high, but only if the bar for job entry were also raised way high (and tenure were eliminated). It's sorta like the airport security situation: now they are federal employees, with big pay raises--the same dumb people, that is--and the main effect of federalizing them is that now it's almost impossible to fire one.

Len.

As a long-term Federal supervisor (22 years) who had to discharge several prople, I learned first-hand that it is not impossible to discharge an employee for failure to perform. All it takes is LOTS of work on the part of the supervisor - but that's exactly what the supervisor is paid to do. If the supervisor is lazy, s/he is not performning and it becomes his/her manager's problem....and so up the line.

Yeah your right. Poor Donny has so little in his life anymore. Since he
can't 'chat' on 313 anymore he has decided to make GB his 'new' love object.

I guess it is the same for GB too. I heard him say if you want to hear some
technical stuff go listen to Donnie.

Yeah buddy....be right there with note pad in hand.

That's a bit too metaphysical, but the logical statement is
relatable to extinction:

IF you don't choose to agree with old conservatives in radio THEN
you will be damned and dishonored one way or another ELSE you
are considered unfit to cohabit the same universe with them...

A logical statement in this newsgroup when up against the ultra-
conservative hard-liners in here. :-)

Mr. Catapult (or is that "catafalque?") gives a mighty large
damn since he is determined to Have His Way despite being
wrong on film and photography. Way too large an EQ
(Exageration Quotient) such as patents, jeep electrical
system voltage, knee keys as standard P-51 pilot comm
gear, and numerous other little gaffes taller than a giraffe.

>Usual Putz duck the point & try to divert maneuver. "Minor technical
>point". Yeah, it's a "minor technical point" Putz. Because anybody who
>knows diddly squat about photography knows that from long before the
>CVA 66 America was launched in 1965 until right now the PX135 series
>of Plus-X films have been ASA 125 films.

Strange that Eastman Kodak would then go to the trouble of
printing film speeds for years on their packages of film and in
their helpful photography books and pamphlets...such as Plus-
X originally rated at 50.

>Any time somebody points out
>another one of your screwups which expose your ignorance of the
>subjects you compulsively rattle on about at boring lengths are "minor
>technical points". What else could they be? PUTZ!

Tsk, tsk, tsk. State the truth as a correction and the
cataphalque tossers come all unglued...

>And by the way those antique bulk packs were junk 35mm movie film, not
>professional still camera film. Explains why I could get rivet-level
>resolutions and you couldn't. Putz.

Eastman Kodak packed "bulk" 35mm as continuous, notched
for leader and tail, as five 36-exposure strips. Edge markings

were also exposed for individual frames, visible after developing. That was not "junk movie film." They came packed in nice metal cans which were also handy as storage cans for many things or shield enclosures for L-C filters and the like.

I've never "been officially assigned as a Bear photographer" so I can't reply to "rivet-level resolutions" at 750 feet. :-) On the radio-electronics side, my photographs printed with a two-part article on a universal regulated power supply (Popular Electronics magazine, 1968) showed the panel meter scales in full detail on 8 x 10 enlargements on DuPont Varigam, using an Exacta VX and 50mm with close-up bellows, Plus-X loaded and tank developed with FR Monobath. Note: DuPont had quit making Varigam by then but enough paper was on hand to print the enlargements; Varigam filters were entirely compatible with Kodak Polycontrast paper on the market to replace Varigam. A little Durst 35mm enlarger was used...it now sits on the garage shelf rather unused due to technology providing digital imagery with far greater ease in use.

>The good news is that the more "expertise" you claim the deeper the
>hole you dig for yourself.

Not at all...except in some spit-shooting contest with a beeper trying to justify some definite non-radio-related BS.

>> Trouble here is that Kellie wants to belabor ancient history
>
>Ya mean like yer 1951 bulk pack Plus-X bullshit?? How ancient is
>THAT??

Five-roll bulk pack 35mm film was available from Eastman in camera stores on up to 1972, both Plus-X and Super-XX.

>Whew . . whatta rant . . will everybody who gives a rat's patooie
>about ANY of the above please raise yer hands?

While 1972 is 30 years ago, November 10th, 2002 is only a month ago. My photo work was published in the Stars & Stripes a month ago, six images (supplied on CD-ROM with many more on the CD) printed in a two-page spread. Has Kellie gotten his "Bear" pictures published anywhere? :-)

Do CATAPULTS have any application to amateur radio? Does "official authorized photography of USSR aircraft" have anything to do with amateur radio policy? Does arguing over film speeds (despite light ratings published widely by manufacturer) have anything to do with amateur radio policy? Answer to all: NO.

Does bragging or exaggeration have anything to do with amateur radio policy? Obviously YES since long-time beepers still insist on the mythology of morse code skill as a "necessary" part of amateur radio...despite the FCC's own words of 12

years ago and today that it is NOT necessary to prove anything
to them in regards to amateur license grants.

>Problem with that one Putz is that I have the stacks of cards and the
>plaques and certificates.

Goodie. Build a shrine to them and worship regularly. Publish
them for all to admire and envy. Or, get a lot of epoxy and glue
them to outside walls of a house...excellent "R" insulation rating
with properly-treated paper and cardboard.

>The RRAP Back Channel has done some "verifying" too, believe it Putz.
>Go ahead, stick yer foot in it. This oughta be good.

Is that something like the Liars Club? :-)

>Uh-huh. Got it Putz. You were involved in the design work of all three
>phases. System design work obviously doesn't happen at test
>facilities. Understood. So the RCA hardware fell outta the design work
>and RCA shipped you to NADC to be an RCA rep for the SECANT job. The
>usual. Now kindly explain why you abrubtly departed NADC after the
>first phase and did not participate in the following two phases.

The "abrupt departure" was explained: A stand-down for year-
end holidays '71-'72; ending the flight tests in '72. Scheduled.
Sorry, Mr. Catafalque, I was indeed in the second and third
phases of SECANT design, doing the RF design. Another
staffer got to go east for the second phase testing...I was also
doing RF design on the RIHANS program and did the entire
design of the AN/ASM-416 test set. The third phase of
SECANT was the pre-production package that used SAW
matched filters for constant-bandwidth, constant time-delay,
made in another RCA division, an 8-channel IF strip and
detector assembly in a very thin planar assembly...front-end
circuitry was fitted wherever possible in a 3/8 ATR case.

>Don't try to bullshit us by coming off with anything like "the testing
>of the RF and IF sections was completed in the first phase". We know
>better than that Putz.

Mr. Catapulting Cataphalque knows absolutely nothing of the
kind. SECANT was technologically controversial to old-time
radio hardliners and required them to review modulation
fundamentals to see how it worked (not unlike the SSB un-
believers in amateurism of the '50s). The physics of it was
solid but the extreme resistance of ultra-conservatives had to
be dispelled by actual hardware and flight tests. There were
two flight tests on SECANT: RCA-funded flight tests over the
Mojave in mid-summer (contracted with a Long Beach company)
and the government-funded flight tests done by NADC. NADC
was also tasked with flight testing of a competitive Minneapolis-
Honeywell system for collision avoidance based on their
existing helicopter station-keeping system. Flight test aircraft

involved an RA-2, C-117, and S-2; the RA-2 was time-shared
with NADC's testing of NAVSTAR, the prototype for today's
GPSS. Flight tests were done within the Philadelphia control
center, Patuxent River Theodolite Range, and one week at
Key West NAS due to inclement weather in PA.

In mid-1975 the DoT abruptly removed all funding for further
flight testing of both RCA and Minneapolis-Honeywell systems,
including hardware support. The reason came out later, that
of internal political, not scientific, government support for ATC
collision avoidance systems to adopt the MIT scheme which
had been flight-tested in two Piper Cherokees. Minny-Honey
and RCA systems had been proven at jet speeds of 450 Kts.
The present-day ATCRBS is a derivative of that original MIT
system and suitable only for air carrier aircraft for detecting
possible collisions with other air carrier aircraft.

>I've been "disbanded" several time Putz, but never in the middle of a
>test series for hardware I designed or helped design. Come clean Putz,
>why weren't you at NADC for Phases 2 & 3?

Those reasons have been explained. I was not an employee of the
government then nor later. NADC was tasked only with flight test
and evaluation of testing...of both corporations' systems...as directed
by the US government agencies involved. There was NO design
done at NADC for either corporations' systems. Phase two involved
some redesign for different data recording (magnetic tape in-flight
recording instead of Phase one's photo theater), data to be
processed by the CDC 60-bit-word mainframe. Phase three was
a package improvement to reduce size and optimize general system
performance with several new technological features (special digital
ICs, SAW filters, etc.) that would be available for a general aviation
version. SECANT worked very well in actual practice, as did the
Minneapolis-Honeywell system; it could come down to a coin-toss
technologically as to picking either one. Other parties within the
US government grabbed the coin and forbade any more testing.

There was exensive documentation on the system, in detail, each
phase. None of that was classified since the testing involved
government funding for all aviation. Documentation is available
from General Electric Company (which bought out RCA), the FAA,
several electronics industry publications. SECANT was not a
little bearing not needing lubrication idea, ace, it had bigger
implications and applications. The same with RIHANS (River
Inland Harbor Area Navigation System). The exception for RIHANS
was that NAVSTAR was still being worked out '73-'74 when
RIHANS was put into hardware and tested in two harbors. Since
NAVSTAR evolved into GPSS and the civilian market provided
GPS receivers, low-cost and near accuracy to military GPS,
RIHANS was aced out at the system level. RIHANS was a bit
too accurate relative to GPS with an error of only a yard all the

way out to the radio horizon (proved in the multipath-rich environment of Galveston harbor). USCG was the site testing coordinator for RIHANS. Again, an unclassified R&D program, extensively documented in detail.

It would be interesting to the technology-interested to discuss some of the other programs I was involved in at RCA, but those are either under corporate trade-secret classification or might still be under government security classification. I can say that my working group evolved a viable all solid-state aircraft radar concept using already-proven sub-systems. Mostly the brain-child of Jim Hall, KD6JG, it would not need a high peak-power magnetron yet would have the same range as the longest-range civil aviation radar, would not need a wide bandwidth in the receiver nor any CRT (replaced with an LCD)...in 1975. All of those features have been adopted, but much much later.

The bottom line is that technological advancements are still happening and that long-time fish-story retellers are still highly resistant to change and demanding of respect for skills that peaked in radio way back in pre-WW2 times.

Film manufacturers have upped their light sensitivity ratings, only to find themselves in close competition with digital cameras and no need at all for any developing darkroom. Long ago manual telegraphy skills were outclassed, outmoded by faster, better, more accurate text transmission systems over radio, wireline, and nearly every other medium of communications. Just the same, some stubborn old men insist on retention of old standards for no logical reason other than their insufferable pride and ego...and insistence on damning all those who won't worship their "prowess."

>GrayJL, making CW testing related to Chicoms overrunning his position.
> Sounds like Korea time frame.

Early Korean War prior to somewhere around 1960 or whenever
the Chinese officers stopped coming to Panmunjom regular
truce meetings. The Korean War truce "talks" have been going
on since July 1953. The Korean War has NOT been "over" for
49 years.

This newsgroup does have some other niceties such as the
not-yet-amateurized Missourian "saving an entire brigade in
Vietnam" apparently solo with a single PRC-25 transceiver.
Neither the AN/PRC-25 nor the PRC-77 replacement have any
"CW" (on-off keyed) capability. They are VHF radios. A
brigade is approximately four battalions and each battalion is
approximately four companies and each company has about
four platoons of 40 each...roughly 2500 men (give or take) in
a brigade...but each platoon would have had a '25 or '77 since
it was a standard radio in the field at that time.

There's still the wondrous tale of the "ex-colonel" whose "son
was behind enemy lines in the Gulf War sending intelligence
data by 'CW'" to prove the machismo of morse. That was
rebutted entirely and the "colonel" sort-of admitted a faux pas
and never showed up in here agan.

>> addition to that, he stated that "the FCC came to him and others

Sigh...some righteous, ultra-conservative, ego-triumphant
long-timers just can't read English as she are wrote.

I never tested for any "GROL." My First Class Radiotelephone
(Commercial) Operator License was tested for and granted in
1956. It was renewed regularly, then the FCC dropped the
'phone classes to a single General Radiotelephone. I still keep
mine in a safety-deposit box, taking it out only to scan it so
that some cry-baby long-timers can refuse to accept it in
e-mail. :-)

Keeping a certificate in a safety deposit box is VIRTUALLY
the same as RETIRING it. Radiotelephone licenses are nice
keepsakes for some, I suppose, but times change and they
aren't much needed in the larger world of today's radio.

In retrospect, I should have worn just my shower clogs in
early March when I rode 90 miles on a train into Chicago and
the nearest FCC field office to me in 1956. There wasn't any
snow that day and the northern Illinois land is rather flat. It
wasn't the same as walking barefoot uphill both ways in the
snow to take an amateur test...but then Chicago streets and
sidewalks weren't all that sanitary in those days.

I just wore shoes and socks plus normal winter clothing. I
just don't measure up to mighty macho morsemen amateurs.

Could it be . . . . could it be . . . now this is just a guess . . . but . . . could it be that W1AW is broadcasting bulletins and code practice that are of benefit and interest to radio amateurs in general and W1MAN is broadcasting personal bullshit.

Once upon a time the USofA was a nation in which mutual respect and decency were the rule. Now, mutual respect and decency are the exception. This is why such dolts as W1MAN are given a free ride -- that is, given a free ride by people just like him. He performs no useful purpose, W1AW does.

But, then, this nation has turned to an ethic that says "I'll do my thing and the rest of you can kiss my ass."

Sad.

Phil missed the first go at this and Lennie is doing his best to make sure
he doesn't see it.

Phil, Lennie announce to the Newsgroup some two Octobers ago that he was
allowing his GROL to "expire", thereby divesting himself of all FCC licenses.

He got his nose rubbed in his own errors (again) and he still seems to be
embarrassed over tripping himself up (again).

>I still keep
> mine in a safety-deposit box, taking it out only to scan it so
> that some cry-baby long-timers can refuse to accept it in
> e-mail.

You lost your chance to be respected and trusted when you violated that
trust by using the opportunity to mail an obscene gesture in lieu of what you
promised to send.

You allege to be an "engineering" professional. You demonstrated
otherwise.

>Keeping a certificate in a safety deposit box is VIRTUALLY
> the same as RETIRING it.

No, it's not. It's good for life (YOUR life) except under the
circumstances that I, Jim Miccolis, Phil Kane and others have pointed out.
Revocation or suspension for cause or submission for cancellation are the only
ways to "retire" a license. As far as the FCC's concerned, if you still have a
pulse, that license is "valid".

>Radiotelephone licenses are nice
> keepsakes for some, I suppose, but times change and they

> aren't much needed in the larger world of today's radio.

Then get a big red marker, write "CANCEL" across the front and send it to Gettysburg.

>I just wore shoes and socks plus normal winter clothing. I
> just don't measure up to mighty macho morsemen amateurs.

I doubt you measure up to anyone, Your Lyingness.

>In retrospect, I should have worn just my shower clogs in
> early March when I rode 90 miles on a train into Chicago and
> the nearest FCC field office to me in 1956.

That's a scary picture, but not unexpected.

Now, Lennie, how about answering the question that started the thread...WHAT radio license issued by the Federal Communications Commission offers the same access to the wide breadth and scope of electromagnetic spectrum as an Amateur Radio license?

Hmmmmmmmmm....?!?!?!?!

> It [P1 license] was renewed regularly, then the FCC dropped the
> 'phone classes to a single General Radiotelephone.

Not really - only the First and Second Class Radiotelephone Operator Licenses were concatenated into the single GROL. The "Third" was renamed the Marine Radio Operator Permit (required on certain small passenger-carrying vessels) and the "Third with a Broadcast Endorsement" was dropped entirely. The Restricted Radiotelephone Operator Permit still exists - required for international aircraft radio and certain marine radio operation. The Commission added two other licenses for the required Global Marine Distress and Safety System radio equipment (a digital data and SSB voice system replacing the old MF/CW 500 kHz distress system with its venerable _SOS_) on ocean-going vessels - the GMDSS Operator Permit, counterpart of the Marine Radio Operator Permit, and the GMDSS Maintainer License, counterpart of the GROL.

> Keeping a certificate in a safety deposit box is VIRTUALLY
> the same as RETIRING it.

No different from hanging it on the office wall.....

> Radiotelephone licenses are nice
> keepsakes for some, I suppose, but times change and they
> aren't much needed in the larger world of today's radio.

Unless you are servicing marine or aircraft radios. The State of California Radio Shop still requires the GROL for their service techs because the job includes assignability to service such transmitters licensed to the State.

Ya get lost in his "dazzling" diatribes . . he apparently had an old
First Phone 'way back, I'm clueless wrt to how those were converted
into GROLs but he probably had an early version then renewals which no
doubt did have expiration dates. Many many moons ago he stated that he
dropped it. Beats me. No doubt he'll pop up here and dump in another
half-megabyte dazzler and straighten us all out. Again.

I agree. I might not like K1MAN taking up space in the voice part of the
spectrum. However I do believe that he has the same rights as the ARRL.
So if he has to stop then the ARRL has to stop too. They used to use
the argument that it was for code practace. Which is fine but they use
other digtal modes too. With code becoming a thing of the past the FCC
needs to open up that part of the spectrum for voice operation and this
would make more room for the K1MAN newcasts.

3745. Serious crisis in the URE (Spanish RadioHam Society)

Newsgroup: rec.radio.amateur.policy
Date: 2002-12-16 00:01:00 UTC
From: otromas@lared.zzn.com
Message-ID: <bc08f00c.0212151601.5d1dfcdd@posting.google.com>
Source record: 58035
Cross-posted to: rec.radio.amateur,rec.radio.amateur.misc,rec.radio.amateur.policy,uk.radio.amateur,es.rec.radio.amateur

Last week the Chairman-EA1RF and the ViceChairman-EA2NO of the URE (Union de Radioaficionados Espaï¿½oles ~ Spanish Radioamateur Society) have resigned.

This contribute to aggravate the chaotic economic situation of this Society.

A great majority of members demanded a long time ago responsibilities to these Board of Chairman and studying to do a censorship motion to substitut the Chairman.

Before that censorship motion, the President has taken the door and has left fleeing, anticipating his probable defeat. Simultaneously, the Vice-Chairman has done the same. Of temporary form, the functions will have to be made by the Secretary-EA1QF, who is known as a non-operative man in the management of any type of activity.

If the URE had a very doubtful future, now it has it still more complicated:
-A load of debts with banks (more than 90.000 euro).
-An important reduction of members (at the moment only about 10,000 members).
-An high increase of the quotas (20 % for the 2003)

In addition to all that, last summer, the Board of Chairman eliminated diverse basic services for the members, decision very badly welcomed by the social mass.

According to some comments in the spanish radio forums, a great number of members is not going to pay the annual quota, because they doubt that the collected money can reach to cover the ordinary necessities of the association, and it is probable that shortly the New Board of Chairman decides to put an extraordinary quota to be able to support the numerous expenses of an association that maintains infrastructures to take care of about 25,000 members.

It is possible that we be attending to the final of a founded Association more than 50 years ago with a great illusion by a group of radiohams, and how in the last 10 years has seen how by a bad management she is destroying itself.

Yes, you are very pitiful. Right now, ND8V is on 14.275, just complaining
about K1MAN.

"size 46 pants" <fatasshamop69@yahoo.com> wrote in message
news:3dfb7980@snipnews.snip.net...
Who's those unconsiderate hams jamming k1man
on 14.275 as I type this! How ineffective, hey guys
you'se gots to crank up the power more, ole Baxter
Boy's obsolete transmitter is splatterin 3 kc's either
side and sounds like he's got his Henry runnin illegal power.
You just ain't cuttin it boys, TURN UP THE POWER
VOLUME and you'll obscure the RF from Maine
a little bit better. This barefoot jap crap just ain't doin
the job O-Tay? :) :) :) :)

Big-headed Baxter is jamming again. The trouble is he uses his "broadcast"
to make personal attacks upon Riley and other Hams who have displeased him.
This fat head rectal cavity should have his license pulled for malicious
interference as has been done to several others.
Why has this not happened? Riley? Huh?

Actually, you will find that he is NOT that well respected in his home area of Southern California.

He had blatent lies and misinformation when he reported on the Southern California conflict over 145.460 MHz and repeater usage there. I personally knew the owners of the equipment on the Los Angeles side (and did not personally know the Tijuana side). The L.A. side was NEVER asked for their side of the story, nor were many of the facts of this conflict even accurate as reported.

More recently, he screwed the pooch on reporting about "indian code talkers" during WWII, reporting that they were Comanche, not Navajo.

There's also an issue of why he reports that it costs about $1,000.00/month to put his "Newsline" show together, especially when the the Albany, NY based service, "This Week in Amateur Radio" does it for 10% of Pasternak's cost. Simply put, they do not pay themselves a salary like WA6ITF does. I don't know what the ARRL's cost is for their "weekly newsletter" - the next closest comparable service.

Lastly, there's always the matter of the stories he WON'T report, such as one several years ago when some amateurs were challenging a local So. CA repeater coordination group with not doing its job. These amateurs even went as far as seeking for such documents as requests for non-profit status of the coordinator before the IRS (which ARE public record - 26 USC 6104 - unlike the tax records of individuals and for-profit corporations), authority to exist from the State Controller's Office (where corporations and other non-individuals must file tob e granted legal existance), etc.... I heard about this, and even met two such "alternative coordination" groups that had popped up. However, ITF was silent. The extent of such a challenge was clearly news.

[I do agree that the prior negative comment should not have quoted the entire ITF-spam.]

PS: You don't see me hiding.

Having never listened to K1MAN, I am not sure what his "broadcasts" are about, but as I recall, the only "broadcasting" allowed by FCC rules are bulletins and such related to amateur radio, not personal viewpoints, etc. W1AW definitely fits that criteria, I am not so sure about some of these other guys that I keep reading about here.

OK.

I thought that way for many years, and still lean that way at times. But in
recent years I've thought that the whole situation is actually simpler than
most religions make it out to be. For example, to decide whether or not there
is a God, first you have to define just what you mean by "God", and most
religions don't even get that far.
>
>I think that any person, or any group, that claims to have "God on their

>actions. All of which, of course, was subject to their personal or
>collective interpretations of those writings and prophets.

I agree 100%. But not all religions use the "God is on our side" angle to
justify crimes against nonbelievers.
>
>I need *no* other reason to shun organized religion.

I used to think that way, too.
>
>I essentially believe that all of organized religion is humankind's
>collective way of trying to understand and make sense of what they do not
>know, and prepare for what they fear the most- which is the unknown, after
>we die.

That's one reason for the existence of religions. Here's another:
